

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

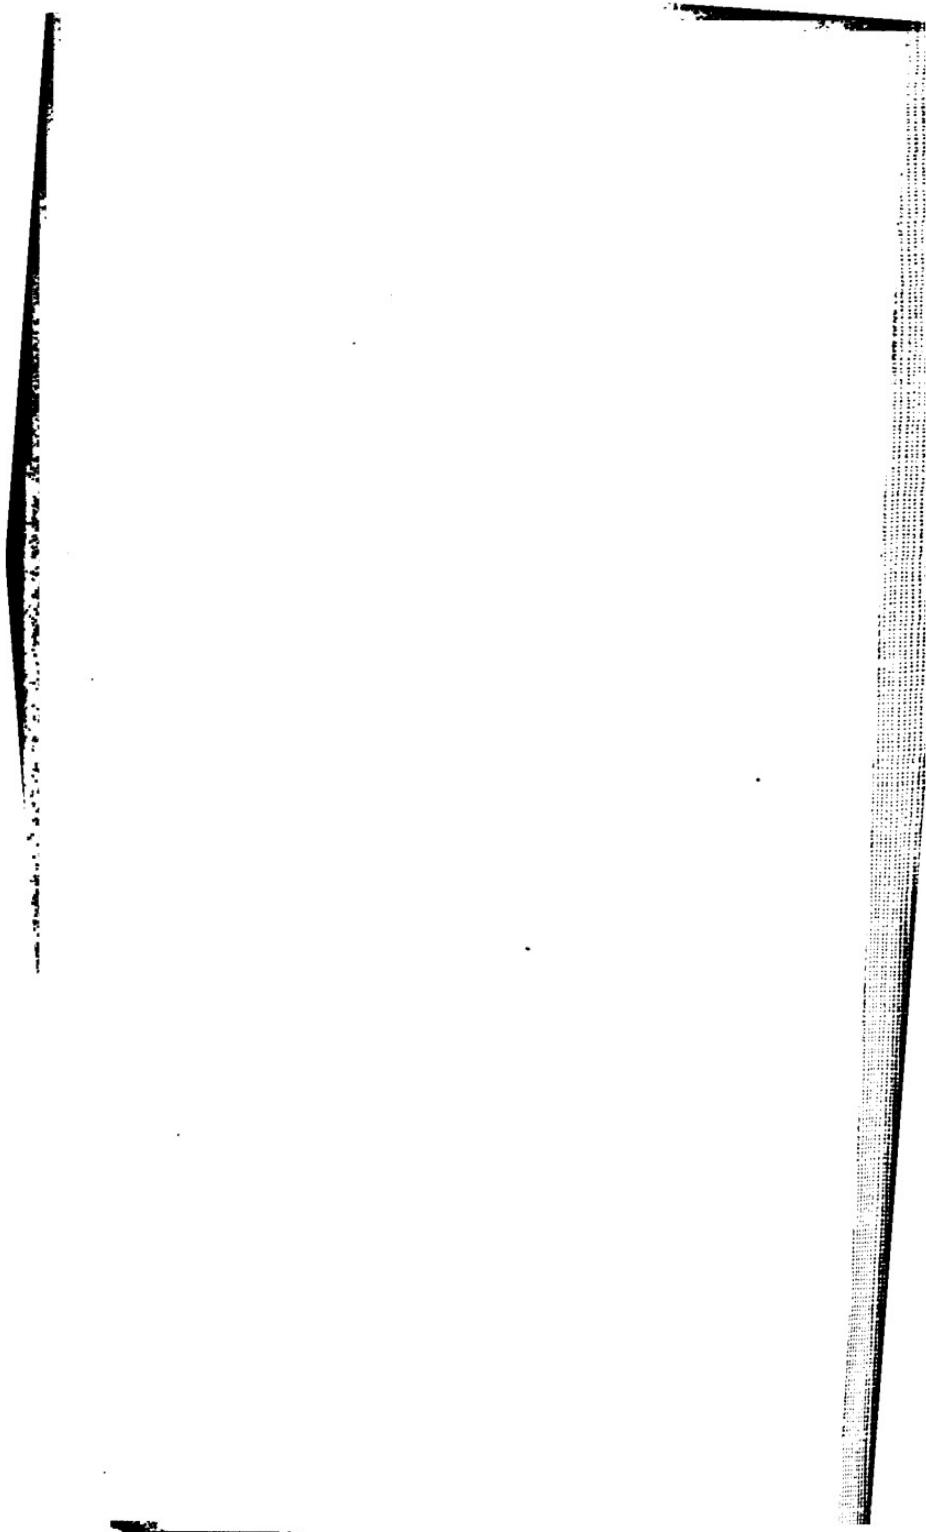

### About Google Book Search

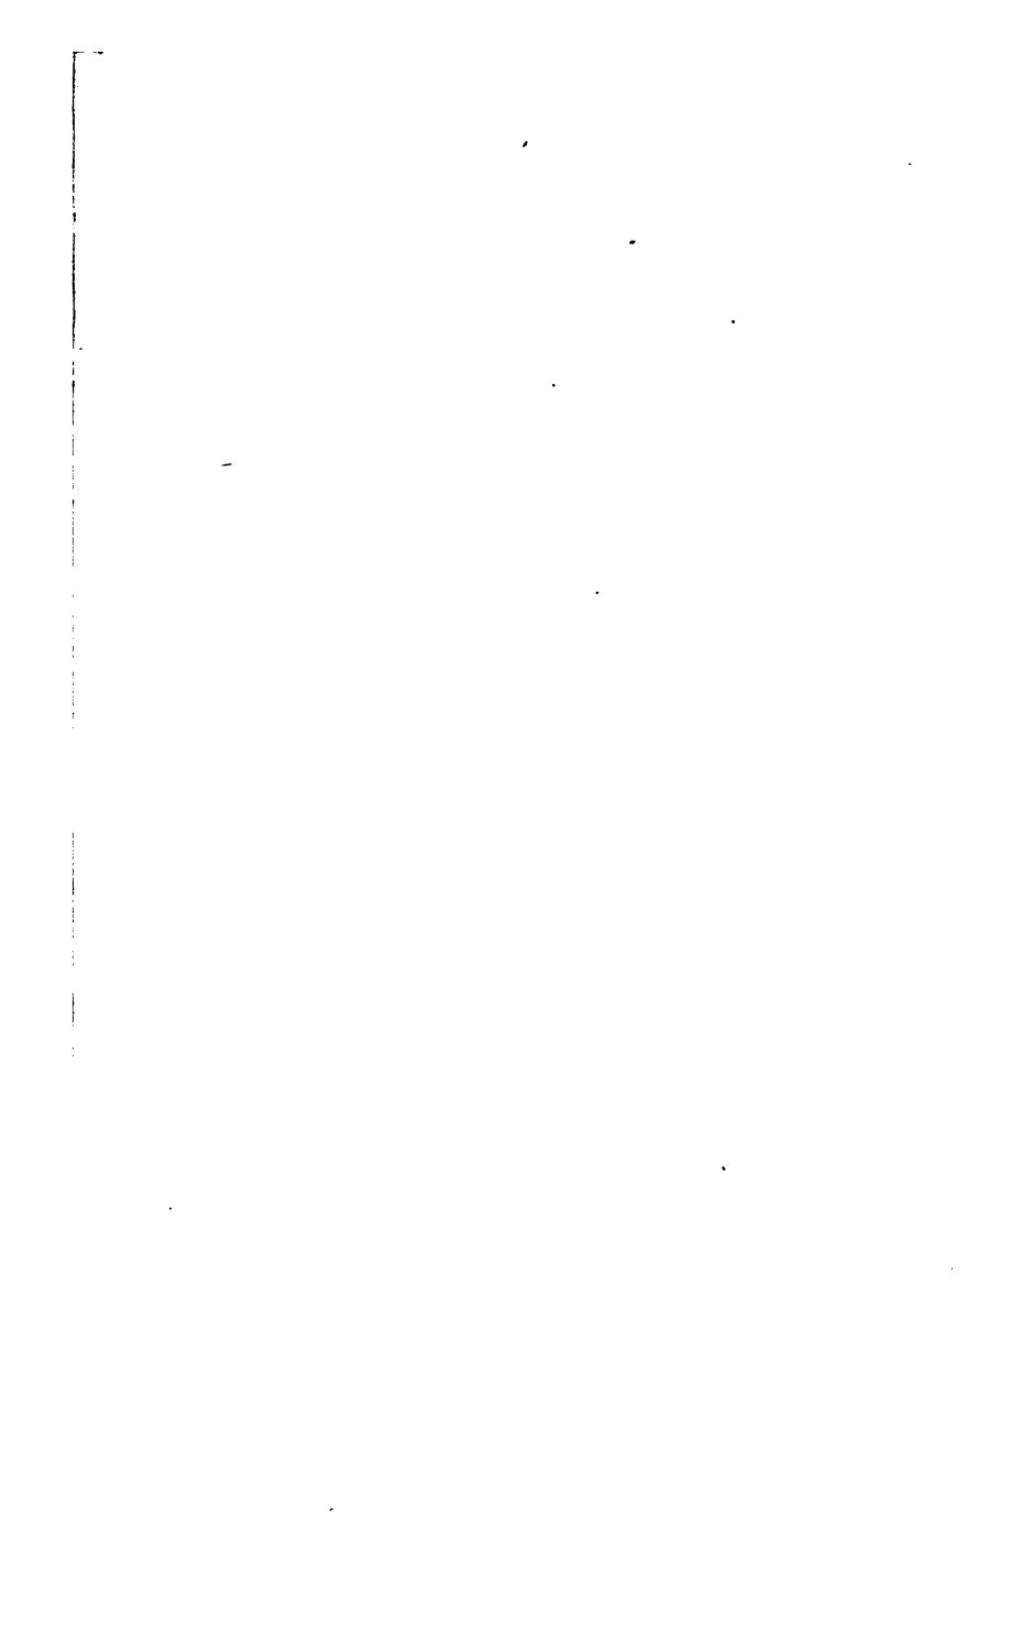

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

BY THE LATE

**MACVEY NAPIER, Esq.**

EDITOR OF

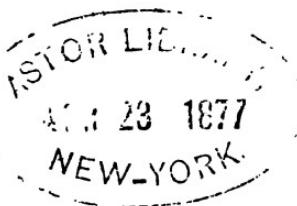

THE EDINBURGH REVIEW AND OF THE ENCYCLOPEDIA BRITANNICA.

**Cambridge:**  
MACMILLAN AND CO.

1853.

¶

MR. W. W.  
OLIVER  
VIAZELLI

## NOTICE.

THE following Essays are to be regarded only as sketches of more extensive works projected by their author. That on LORD BACON was read, in 1818, to the Royal Society of Edinburgh, from whose *Transactions* it has been reprinted. It is not so much an exposition of his philosophy, of which it gives only a slight and general outline, as an attempt to trace and determine its influence, both in this country and on the Continent. The Life of Sir WALTER RALEIGH appeared some years ago in an article in the *Edinburgh Review*, of which Mr. Napier became the Editor on the retirement of Lord Jeffrey in 1829. A complete biography of Raleigh could not be comprised within its necessarily circumscribed limits; but it will be found to contain a pretty full account of all the more

remarkable events of his career, with an estimate of his public and literary character, founded on original information derived from unpublished sources, and on a careful examination of all the printed authorities.

## *LORD BACON.*

THE obligations of experimental physics to the labours of Lord Bacon have been largely acknowledged by the generality of those who have treated of the history of Modern Science; insomuch, that the title of *Father of Experimental Philosophy* has been oftener conferred upon him than upon any other of its benefactors. There are some, however, who seem to think, that there is no good ground for honouring him with this title, either on account of the merits or the effects of his writings. They do not indeed deny, that his views of the proper objects and method of philosophizing were extensive and just; but they contend that he had no *peculiar* merit in having stated these views; that all that he taught was virtually and more effectually

taught by some of his contemporaries; and that there are no traces of his agency to be found in the discoveries that followed.\* These opinions, though they are to be met with in respectable books, and in the conversation of intelligent men, seem to involve no small portion both of error and misconception. It cannot be denied, indeed, that, at the time when Bacon wrote, there was a growing tendency to abandon the ancient systems, and that some successful essays had been made in that course of inquiry which he recommended; but, on the other hand, it appears to me equally clear, that his labours for the advancement of Science were of such importance, and productive of such results, as to entitle him to a pre-eminent station among its early

\* “Atqui Verulamius ille, qui Germanæ Philosophiæ Restitutor, quin etiam, si Superis placet, Parens a Brukero aliquis habetur, quid aliud in Anglia præstitit, nisi, ut, qua ratione philosophari deberemus, eo tempore admoneret, quo Galilæus eadem ipsa ratione philosophari jam in Italia cooperat, ac cæteris, ut idem facerent, non modo verbis, verum et rebus ipsais gravissimus auctor esset?”—FABRONI, *Vitæ Italorum doctrina excel- lentiū qui sœculis XVII. et XVIII. floruerunt*, i. 223.

— “C'est Galilee,” says a French philosopher of the present day, “qui a montré l'art de l'interroger par l'expérience. On a souvent attribué cette gloire à Bacon; mais ceux qui lui en font honneur, ont été (à notre avis) un peu prodigues d'un bien qu'il ne leur appartenait peut-être pas de dispenser.”—*Biographie Universelle*, Art. GALILEO; written by M. Biot.

reformers and promoters. It is the object of this paper to offer some remarks, and to collect some proofs, in support of these views; but, as much has been already written in illustration of the merits, and but little in illustration of the *effects* produced by his philosophical writings, I shall content myself, at present, with a slight indication of their general scope, and shall devote the greater part of this paper to the proofs of their influence.

In order to clear the way for this inquiry, I shall begin with a few remarks on a late estimate of Bacon's philosophy, which is of so depreciatory a character as to be remarkably at variance with almost all that has been hitherto written on that subject. And this estimate is the more worthy of notice, that it has obtained a place in a Literary Journal of great respectability, which is supposed to speak the sentiments of the English Universities in matters of philosophy.

It is pretty well known that Bacon's writings have been recently commented upon by two of our most eminent philosophers: by the one, in reference to their connexion with the Philosophy of the Mind;\*

\* See Mr. Stewart's *Dissertation on the Progress of Metaphysical and Ethical Philosophy*, prefixed to the *Encyclopaedia Britannica*.

and by the other, in reference to their connexion with the Material World.\* Both of them represent Bacon as the first who clearly pointed out the legitimate rules and ends of philosophical inquiry; and both consider his writings as fixing a new and important era in the history of modern science. The observations made by the former have been examined at considerable length in an able article of the journal referred to; and the following passage contains the sum of what is there advanced in regard to the scope and character of Bacon's philosophy.

'The topic on which Mr. Stewart chiefly dwells, 'while panegyrizing the Philosophy of Bacon, is 'the respect which it pays to the *limits, the laws,* 'and resources of the human understanding; and this 'is surely the most extraordinary topic of any which 'he has selected. There is *scarcely a page* in the 'Novum Organum, that does not furnish a contra- 'diction to it. So little, indeed, can Bacon be con- 'sidered as having risen in any great degree above 'the age in which he lived, with respect to his 'views as to the proper aim of philosophy, or the 'proper limits of the human understanding, that he

\* See Professor Playfair's *Dissertation on the Progress of Mathematical and Physical Science*, prefixed to the same work.

'even goes so far as to give us formal receipts for  
'the making of gold, and performing other prodigies,  
'which he tells us he judges very possible. With  
'the exception of the disciples of Raymond Lully  
'and Jordano Bruno, *the extravagant speculations in*  
'*which Bacon wished to embark philosophy, had been*  
'*long abandoned by sober inquirers.*'\*

\* *Quarterly Review*, No. xxxiii.—The author of this article seems to have been anxious to find some great names to countenance his opinion of Bacon's philosophical writings. What his success has been in this attempt, the following extract will show.

'I remember, said Sir Joshua Reynolds, that Mr. Burke, speaking of Bacon's Essays, said, he thought them the best of his works. Dr. Johnson was of opinion, that their excellence and their value consisted in their being observations of a strong mind operating upon life; and in consequence you find there what you seldom find in other works.'—*Account of Sir Joshua Reynolds*, prefixed to Malone's edition of his *Discourses*.

'We are glad,' the Reviewer adds, 'to be able to defend our opinions concerning the inferior merits of Bacon's philosophical writings, compared with his other works, from the charge of singularity or presumption, by sheltering ourselves under the authority of such names as Burke and Johnson.'

It is observable, that, so far as Dr. Johnson's authority is concerned, he does not appear, in the conversation referred to, to have made any comparison whatever between Bacon's *Essays* and his other works: he only made a remark descriptive of the *Essays*, in which every one who has perused them will readily concur. Besides, the Reviewer ought to have known that Johnson has, in one of his papers in the *Adventurer*, represented Bacon as the only modern worthy of being compared in a philosophical point of view with Newton; thereby showing that he must have held the philosophical works of the former in the highest possible degree of estimation. Great as the excellence of the *Essays*

It is to be wished that this writer had explained to us, to what delusion it has been owing, that so many enlightened persons have, for more than a century and a half, concurred in extolling Bacon for his endeavours to withdraw philosophy from ‘extravagant speculation,’ and to give it a direction and a method, calculated to improve the condition, as well as the knowledge, of mankind. Have they *all* been in error, and must Bacon be branded with ignorance of the business of philosophy, and the limits of the understanding, merely because he has speculated upon the possibility of making gold? Is this circumstance enough to establish any affinity between the general aims of his philosophy and the extravagant pursuits of the Alchymists? A very few words will suffice upon this point.

There can be no doubt that Bacon did believe in the possibility of discovering the means of converting other substances into gold; a belief which—so far from being abandoned by all ‘sober inquirers,’ as

undoubtedly is, it is difficult to believe that such a man as Burke could deliberately rate them as of higher merit than the *De Augmentis Scientiarum* and *Novum Organum*. Surely some better evidence of this is required than the scrap of conversation so much relied on by the Reviewer.

this writer imagines—was entertained by Boyle, and some other experimentalists, and not greatly discouraged even by Newton, at a period when experimental philosophy was much farther advanced.\* There was no man of his day more thoroughly apprised than Bacon of the follies of the Alchymists, or who has mentioned them in terms of stronger ridicule and reprobation.† He nowhere holds out the making of gold as a prime object of philosophical inquiry; on the contrary, he pointedly censures the Alchymists, with whom he has been so absurdly classed, for directing their main views to such an object.‡ The belief which he entertained of the possibility of making gold, had a very different foundation from that upon which it rested among this fantastical fraternity. With him, it formed part of his general belief, that the essences of all material substances were capable of being discovered by the inductive process. It was

\* There is a curious letter upon this subject from Newton to Mr. Oldenburg, Secretary of the Royal Society, printed in the account of Boyle, in the *Historical Dictionary*. His remarks apply wholly to a particular process of transmutation, and not to the impossibility of the thing itself. See *General Historical and Critical Dictionary*, iii. 558.

† See *Novum Organum*, Lib. i. Aph. 85, 87.

‡ Ibid. Lib. i. Aph. 70.

a belief which flowed from his exalted notions of the yet untried resources of experimental science. There was then no sufficient stock of experience to authorize any one to lay it down as an established principle, that the knowledge of these essences is placed beyond the reach of scientific discovery. It is not very surprising, therefore, that Bacon should believe that a series of skilfully conducted experiments might ultimately lead to the detection of the nature or essence of gold; and that having thus discovered its constituent nature, it would then be possible to superinduce it upon other substances. There is nothing in all this to impeach his respect for the laws and limits of the human understanding. He recommended no inquiry upon any other principles than those of *induction*; and he proposed no object to philosophy, which anything but experience could shew to be unattainable.

But we are farther told that there is scarcely a page in the *Novum Organum* which does not afford proofs of Bacon's ignorance of the laws and limits of the understanding; and that his miscellaneous philosophical pieces seem to have been written in express contempt of them.\* Had this

\* *Quarterly Review*, No. xxxiii.

writer contented himself with stating, that there are many things in Bacon's miscellaneous pieces, which show that he was not exempt from credulity; that his understanding, resplendent as it was, bore some stains of the scurf and scum of an ignorant age; or had he only stated that Bacon's metaphysical notions are sometimes vague and unsound, and his use of language fanciful and uncertain, his observations might have been allowed to pass unnoticed as neither new nor objectionable. But when he goes so far as to charge the *Novum Organum* with everywhere manifesting ignorance of the fundamental conditions of philosophical reasoning, the only conclusion that can be adopted in regard to such an assertion is, that it has proceeded from a very slender acquaintance with the work in question. For my own part, I confess myself wholly unable to conceive, how any man of ordinary judgment can read the *Novum Organum* with ordinary attention, without carrying away an impression directly the reverse of that of Bacon's ignorance and disregard of the laws and limits of the human understanding. The first sentence of the work contains an emphatic declaration of homage to these very laws: *Homo Naturæ minister et inter-*

*pres, tantum facit et intelligit, quantum, de Naturæ ordine, re vel mente observaverit; nec amplius soit, aut potest.* The grand lesson which it everywhere inculcates is, that all false philosophy had sprung from the too high notions hitherto entertained of the powers of the mind, which led to the disregard of the only means by which true knowledge can be obtained. *Causa vero, et radix, fere omnium malorum in scientia ea una est, quod dum mentis humanae vires falso miramur et extollimus, vera ejus auxilia non quaeramus.* Bacon saw more clearly than any preceding inquirer, the folly of supposing the mind capable of explaining the constitution of Nature by means of principles of its own invention, and reasonings *a priori*; and his great aim in the *Novum Organum* was, to withdraw philosophy from such airy speculations, and to employ it in a way more suitable to its purposes, and the limited nature of our faculties. Employed in this way, that, namely, of inductive inquiry, he showed that philosophy would greatly extend the compass of our knowledge, and multiply the instruments of our power.

The truth is that this writer is, after all, constrained to make an admission, which of itself suf-

ficiently proves the groundlessness of his general censure of Bacon's philosophy. 'That the rules of investigation which it lays down, *are wise and salutary with reference to physics*, we are happy,' says he, 'to admit.\* Now, the *Novum Organum* is almost wholly occupied with the exposition and illustration of these very rules; and yet it is said to manifest disrespect 'in every page' to the laws and limits of the understanding, and a total ignorance of the purposes of science. It would prove a rather perplexing task, I should imagine, to show how any one could methodize a set of 'wise and salutary rules of investigation with reference to physics,' who had no sound views of the nature and objects of philosophical inquiry. There must either, in short, be something in the nature of *physics* to take that branch of knowledge out of the general category of philosophy, or it must be absurd to say, that Bacon could unfold the true principles of physical investigation, he being at the same time ignorant of the nature and aim of genuine science. His rules with respect to physical inquiry were 'wise and salutary,' precisely because they were conformable to the laws and

\* *Quarterly Review*, No. xxxiii.

limits of the human understanding; because ‘he ‘saw well,’ to use his own words, ‘that the super-position of the too great sufficiency of man’s mind ‘had lost the means thereof.’\*

It is besides to be observed, that there is no ground whatever for limiting the wisdom and utility of Bacon’s logical precepts to the physical sciences alone. He who admits that they are wise and salutary with reference to physics, must go a step farther, and admit that they are also wise and salutary with reference to inquiries regarding the mind. The object of philosophy, and the principles of philosophizing are the same, whether the investigation relates to the laws of matter or the laws of mind; and thus the logic of the *Novum Organum* cannot be useful with reference to the one, without having the same character with reference to the other. It is upon this ground that Bacon himself represents his logic as equally applicable to the advancement of the moral and metaphysical as of the physical sciences. ‘Atque quemadmodum vulgaris Logica, quæ regit res per *Syllogismum*, non tantum ad naturales, sed ad *omnes* scientias per-

\* *Filum Labyrinths*, Works, i. 400, 4to. edit.

'tinet; ita et nostra, quæ procedit per *Inductionem*,  
'omnia complectitur.'\*

With respect to the *influence* of Bacon's writings upon the progress of physical science, the same writer observes, that it presents a 'point as to 'which it is very difficult to form an explicit opinion. 'But this is sufficiently clear, that if Bacon is to 'be allowed any considerable share in the honours 'which modern experimentalists have acquired, he 'may, in many respects, be compared to the hus- 'bandman in Æsop's fable; who, when he died, 'told his sons that he had left them gold buried 'under ground in his vineyard; and they digged 'all over the ground, and yet they found none; 'but by reason of their stirring and digging the 'mould about the roots of their vines, they had 'a great vintage the following year.' It would, if I do not mistake the matter, be as difficult to explain, how this simile could assist any one to form a correct opinion upon the point in question, as to explain how Bacon could deliver a wise system of rules for the advancement of physics, without having any just notions of the true nature of philosophical inquiry. The object to which Bacon

\* *Novum Organum*, Lib. i. Aph. 127.

directed the attention of his followers, was the very object he was desirous they should accomplish,—the regeneration of philosophy by means of a well-regulated use of observation and experiment. The benefits which accrued to mankind from his directions, were obtained precisely in the way, and were precisely of the kind, which he pointed out and promised. Thus the case of Æsop's husbandman is so far from furnishing an illustration of Bacon's connexion with the advancement of physics, that there is evidently no ground whatever for such a parallel; and the writer who institutes it only proves that he has altogether mistaken the true bearings of the question. But, before proceeding to state the proofs of this connexion, it will be proper to show somewhat more fully, that Bacon's philosophical merit was of the highest kind, and that it was unshared by any other person.

Bacon's grand distinction, then, considered as an improver of physics, lies in this, that he was the first who clearly and fully pointed out the rules and safeguards of right reasoning in physical inquiries. Many other philosophers, both ancient and modern, had referred to observation and experiment in a cursory way, as furnishing the materials of

physical knowledge; but no one, before him, had attempted to systematize the true method of discovery; or to prove that the *inductive*, is the *only* method by which the genuine office of philosophy can be exercised, and its genuine ends accomplished. It has sometimes been stated, that Galileo was, at least in an equal degree with Bacon, the father of the Inductive Logic; but it would be more correct to say, that his discoveries furnished some fortunate illustrations of its principles. To explain these principles was no object of his; nor does he manifest any great anxiety to recommend their adoption, with a view to the general improvement of science. The Aristotelian disputant, in his celebrated *Dialogues*, is made frequently to appeal to observation and experiment; but the interlocutor through whom Galileo speaks, now here takes occasion to distinguish between the flimsy inductions of the Stagyrite, in regard to the subjects in dispute, and those which he himself had instituted; or to hint at the very different complexion which philosophy must assume, according as the one or the other is resorted to. Thus, though Galileo was a great discoverer, it cannot be said that he was distinguished by having taught the principles of

the art by which discoveries are made. That distinction belongs wholly to Bacon. ‘No man,’ says one of the most eminent of our earlier philosophers, ‘except the incomparable Verulam, has had any thoughts of an art for directing the mind in physical inquiries.’\*

Some late writers have, however, contended that this distinction does not belong exclusively to any of the moderns.† ‘It is an error,’ we are told, ‘to represent Bacon as professing his principle of induction to be a discovery. The method of induction, which is the art of discovery, was so far from being unknown to Aristotle, that it was often faithfully pursued by that great observer. What Bacon aimed at, he accomplished; which was, not to discover new principles, but to excite a new spirit, and to render observation and experiment the predominant character of philosophy.’‡ It is with considerable diffidence that I dissent from the author of the splendid and instructive essay here referred to. But I must be permitted to express

\* Hooke’s ‘Posthumous Works,’ p. 6.

† See some admirable remarks on this subject, in the 2nd volume of Stewart’s *Philosophy of the Mind*, chap. iv. sect. 2—*On the induction of Aristotle compared with that of Bacon.*

‡ *Edinburgh Review*, No. III.

some surprise, that he should represent Bacon's aims as having been *professedly* limited to the *revival* of a method of discovery which had been well known to, and successfully practised by Aristotle. Nothing can be more certain, than that Bacon rests the whole hopes of his philosophy upon the *novelty* of his logical precepts;\* and that he uniformly represents the ancient philosophers, particularly Aristotle, as having been wholly regardless of the inductive method in their physical inquiries. He does not, indeed, say that the ancient philosophers never employed themselves in observing Nature; but he maintains that there is a wide difference between observation as it was employed by them, and the art of observing for the purposes of philosophical discovery. ‘*Alia enim est ratio naturalis historiæ, quæ propter se confecta est; alia ejus, quæ collecta est, ad informandum intellectum in ordine ad condendam philosophiam.*’† Bacon does not accuse Aristotle of having always reasoned without reference to facts; but he contends that Aristotle has nowhere laid down rules for aiding and regulating the understanding in the process of discovery

\* *Novum Organum*, Lib. i. Aph. 82, 95, 97, 125.

† *Ibid.* Lib. i. Aph. 98.

by means of facts; and that the use which he has made of them in his philosophy, is very different from the use which is made of them in the philosophy of induction. ‘*Ille enim prius decreverat, neque experientiam ad constituenda decreta et axiomata rite consuluit; sed postquam pro arbitrio suo de-crevisset, experientiam ad sua placita tortam circumducit, et captivam.*’\* It should always be recollected, that Bacon’s call was not merely for observation and experiment, but for observation and experiment conducted according to certain forms and rules, which were first delineated by him, and constitute the body of the inductive logic. There may be nothing in this logic that can be called a *discovery* in the strict sense of the word; but the statement of its precepts was certainly a great step in the advancement of science.

It would require a complete analysis of the *Novum Organum* to furnish an adequate idea of the value of Bacon’s services in this important department of philosophy; but the *fundamental* rules of his method may be comprehended in a few sentences. They seem all to be founded upon the following principles: first, that it is the business

\* *Novum Organum*. Lib. i. Aph. 63.

of philosophy to discover the laws or causes that operate in Nature, in order thereby to explain appearances, and produce new effects: \* next, that we are incapable of discovering these laws or causes in any other way than by attending to the circumstances in which they operate: and, lastly, that the mind is naturally disposed to run into general conclusions, and to form systems, before having made all the inquiries necessary to truth. In conformity with these principles, he shows that all sound philosophy must proceed *from* facts; that the facts in every case must be carefully collected and compared; and that in all our reasonings about them, the natural tendency of the mind to generalize must be carefully repressed. The *spurious* method of induction is that which proceeds suddenly from particulars scantily collected or ill examined

\* *Novum Organ.* Lib. i. Aph. 117. Throughout the whole of the first book, the object of science is represented to be the discovery of *Axioms*, by which term Bacon evidently means those general laws or truths which form the basis of our physical reasonings. Newton, as Mr. Stewart observes, has, after Bacon's example, applied the term *Axiom* to the laws of motion, and to the statement of certain general truths in Catoptrics and Dioptrics. See *Philosophy of the Mind*, ii. chap. 4. Those who are engaged in the study of the *Novum Organum*, will derive valuable information and assistance from this part of Mr. Stewart's work.

to the most general conclusions. The *true* method is that which lays a wide basis in observations and experiments, and generalizes slowly; advancing gradually from particulars to generals, from what is less general to what is more general, till the inquiry ends in truths that appear to be universal.\*

Nothing could be more encouraging or animating than Bacon's recommendations of this plan of inquiry. Though he held that the noblest end of philosophy is the discovery of truth,† he taught that there is a correspondence between this and another end, also of great dignity,—the improvement of the outward accommodations of human life. He showed that, when the principles of science should really be derived from the knowledge of Nature, their discovery would prove beneficial to man, as well in respect to the increase of his *power* as of his *knowledge*; because the principles so discovered would lead to new inventions in the useful arts, and to new rules for the improvement

\* *Novum Organ.* Lib. i. Aph. 100, 101, 102, 103, 104, 105.

† *Ibid.* Aph. 124, 129. He takes some pains here and elsewhere to guard against the supposition that he valued science only as it was calculated to augment the outward accommodations of life.

of all the operative parts of knowledge. He endeavoured to stimulate the spirit of inquiry, by representing the field of scientific discovery as almost wholly uncultivated, and by assurances that it only required to be cultivated with attention to his rules, to yield an endless increase of knowledge and of inventions. ‘Let it be believed,’ says he, ‘and appeal thereof made to time, *with renunciation, nevertheless, to all the vain and abusing promises of the Alchymists, and such like credulous and fantastical sects,* that the new found world of ‘land was not greater addition to the old, than ‘there remaineth at this day a world of *Inventions* ‘and *Sciences* unknown, having respect to those ‘that are known, with this difference, that the ‘ancient regions of knowledge will seem as barbarous compared to the new, as the new regions ‘of people seem barbarous compared to many of ‘the old.’\* It is in these confident anticipations of the future triumphs of science, so often repeated as encouragements to its faithful prosecution, that we perceive the grandeur and reach of his views. His predictions of improvement were not the vague or casual surmises of a happy enthusiasm; they

\* *Of the Interpretation of Nature*, chap. i. Works, i. 376.

were evidently grounded upon an enlightened conviction that the business of philosophy had hitherto been mistaken, and that her labours would prosper when they should be employed with constancy and skill upon their legitimate objects.

Is it not unreasonable to doubt the utility of a system of logical instructions, in which the true art of discovery was, for the first time, explained? These instructions were offered at a period in every respect opportune. There was a growing disposition to revolt against the Schools, and a wise leader was wanted to raise the standard of reform, and to give a salutary direction to the pursuits of those who should emancipate themselves from their authority. The improvement of some branches of physics was already in part begun; but there was no general agreement as to the rules of inquiry. The truths which Bacon taught are now, it is true, known, and their authority acknowledged by all; but this was far from being the case in the early part of the seventeenth century. One of the most intelligent of his friends, Sir Thomas Bodley, to whom he submitted an early sketch of his plan, appears to have been wholly unable to distinguish between the loose procedure of the empirics and

that regulated procedure which it recommends. ‘As for that,’ says he, ‘which you inculcate of a knowledge more excellent than now is among us, which experience might produce, if we would but essay to extract it out of Nature by particular probabilities; it cannot, in reason, be otherwise thought, but that *there are infinite numbers which embrace the course that you propose, with all the diligence and care that ability can perform.* I stand well assured,’ he concludes, ‘that for the tenor and subject of your main discourse, you will not be able to impannel a substantial jury in any university, that will give up a verdict to acquit you of error.’\* But that which places the importance of Bacon’s logical instructions in the strongest light, is the fact, that one of the most celebrated of his contemporaries, who also professed himself a reformer of philosophy, employed the better part of his life in teaching doctrines as diametrically opposite in principle as in tendency. This was Descartes. ‘Never,’ says an eloquent philosopher, ‘did two men, gifted with such genius, recommend paths of inquiry so widely different. Descartes aspired

\* *Sir Thomas Bodley’s Letter to Sir Francis Bacon about his COGITATA ET VISA.* Bacon’s Works, iii. 242—244.

'to deduce an explanation of the whole system of  
'things by reasoning *a priori* upon assumed prin-  
'ciples: Bacon, on the contrary, held that it was  
'necessary to observe Nature thoroughly before at-  
'tempting to explain her ways; that we must  
'ascend to principles through the medium of facts;  
'and that our conclusions must be warranted by  
'what we observe. Descartes reasoned about the  
'World, as if the laws which govern it had not  
'yet been established, as if every thing were still  
'to create. Bacon considered it as a vast edifice,  
'which it was necessary to view in all directions,  
'to explore through all its recesses and windings,  
'before any conjecture even could be safely formed  
'as to the principles of its construction, or the  
'foundations on which it rests. Thus, the philo-  
'sophy of Bacon, by recommending the careful ob-  
'servation of Nature, still continues to be followed,  
'whilst that of Descartes, whose essence lay in  
'hypothesis, has wholly disappeared."\* Nor was  
Descartes ignorant of what Bacon had taught as to  
the principles of philosophizing. It appears, on the  
contrary, from his correspondence, that he was well  
acquainted with Bacon's writings; and, in one of

\* Bailly, *Histoire de l'Astronomie Moderne*, ii. liv. 4, § 2.

his letters, he seems to admit, that provided the Experimental were the true Method, there was nothing that could be added to increase the utility of Bacon's precepts.\*

Having made these remarks with a view to point out, in a general way, the nature and importance of those aids and encouragements which Bacon's writings furnished to physical inquiry, I shall now endeavour to show, that the subsequent progress of physical knowledge was greatly accelerated by the effects which they produced. And here I beg to observe, that I have no argument with those who hold that the reformation of philosophy would have taken place, though Bacon had never written; any more than with those who argue, that physical science owes nothing to him, on the ground of any discovery of importance made by himself, or deduced by others from his suggestions. I have before stated that this reformation was in progress, and that the inductive method had been exemplified in the discoveries of some of his contemporaries. But I contend, that Bacon did *more* to forward its general adoption than any other person; because his

\* *Lettres de M. Descartes*, iv. 201, Paris edit. 1724.

writings led to the abandonment of the scholastic methods and systems, generated a relish for experimental inquiries, and imbued the minds of the ingenious with the views and principles requisite to conduct these inquiries with success.

The great reputation which Bacon had acquired from his *Essays*, a work early translated into various foreign languages; his splendid talents as an orator, and his prominent position in public life, were circumstances strongly calculated to attract the curiosity of the learned world to his philosophical writings. They accordingly appear to have been early read by the learned at home, and early transmitted to the learned abroad; and it farther appears, that the important truths which they disclosed did not remain long unperceived, or barren of consequences. ‘Dr. Collins, Provost of ‘King’s College, Cambridge, a man of no vulgar ‘wit, affirmed unto me,’ says Bacon’s Chaplain, Dr Rawley, ‘that after reading the *Advancement* ‘of *Learning*, he found himself in a case to begin ‘his studies anew, and that he had lost all the time ‘of his studying before.’\* Of his more recondite

\* *Life of Bacon*, prefixed to Rawley’s *Resuscitatio, or bringing to light several pieces of the Works of Lord Bacon.*

work, his distinguished contemporary Ben Jonson speaks as follows: 'The *Novum Organum* is not 'penetrated or understood by superficial men, who 'cannot get beyond Nominals, but it really openeth 'all defects of knowledge whatsoever; and is a book

"Qui longum noto Scriptori proroget sevum."

Sir Henry Wotton, another of the most eminent men of that day, thus warmly expresses his opinion of its merits: 'I have received,' says he, in a letter to Bacon written from Germany, 'three copies of 'that work, wherewith your Lordship hath done a 'great and everlasting benefit to all the children of 'Nature, and to Nature herself in her utmost ex- 'tent and latitude, who never before had so true 'an Interpreter, or so inward a Secretary of her 'Cabinet.'† In this letter, Sir Henry gives an interesting account of his having accidentally met with the celebrated Kepler, in Upper Austria, to whom, he adds, he was about to send one of his copies of the *Novum Organum*, for the honour of England. It is not surprising, that a writer who entertained such sentiments in regard to the importance of

\* Ben Jonson's *Discoveries*. Works, vii. 100. Whalley's edition.  
 † *Reliquiae Wottonianæ*, p. 299, 3rd edition.

Bacon's philosophy, should have been led to predict the speedy downfal of that of the Schools. 'Sir Henry Wotton,' says Dr. Beale, in a letter to Boyle, written about forty years after this period, 'would often please himself in lashing the Schoolmen; and would often declare it as a serious prediction, that in *this age* their reputation would 'yield to more solid philosophy.' Dr. Beale adds, that he had himself been weaned from the errors of the Schools, by the early perusal of Bacon's philosophical writings.\*

In a letter to King James, written about the period of the publication of the *Novum Organum*, Bacon states that the *Advancement of Learning* had been very favourably received in the Universities; and he thence draws the conclusion, that the *Novum Organum* would also be acceptable to them, because, says he, 'it is only the same argument sunk deeper.'† In an address presented to him by the University of Oxford, in the year 1623, he is represented as a 'mighty Hercules, who had by his own hand 'greatly advanced those pillars in the learned world, 'which, by the rest of the world, were supposed

\* Boyle's *Works*, vi. 355.

† Bacon's *Works*, iii. 584.

immovable;\* and this piece of homage, it is to be observed, was offered at a time when all mutual unfeigned admiration had been done away by his momentous fall. These facts seem to show that Bacon's writings had early made a strong impression even in quarters where it was least to be expected. Accordingly we are informed by Bishop Sprat, that when some of those ingenious men who afterwards assisted in forming the Royal Society, began, about the end of the Civil War, to establish a weekly meeting at Oxford for philosophical discussions, they found that the new spirit of 'free inquiry' had already made considerable progress among the members of the University.†

When one of Bacon's friends asked him, whether he thought the churchmen likely to oppose his intended reformation of philosophy, his answer was

\* Tennison's *Baconiana, or certain Curious Manuscripts of Sir Francis Bacon*, p. 206.

† Sprat's *History of the Royal Society*, pp. 66, 672. 'Sir Francis appears to have made still greater progress in knowledge. Dr. Baker, who became a student of Exeter College, Oxford, in 1642, 'lamented,' says Anthony Wood, 'that no teacher did not teach 'him to Cambridge; because he used to say, that the more philosophy, and the art of philosophizing, were made cultivated there than here at Oxford.'—*Athen. Oxon.*, ii. 662. — After the way of free-thinking,' says Baker, 'had been laid open by Lord Bacon, it was soon after greatly followed.' Took his reflections

'I have no occasion to meet them in my way, except it be as they will needs confederate with Aristotle, who, you know, is intemperately magnified by the school-divines.'\* We are told by Osborn, a contemporary observer, that the 'school-divines' did endeavour to cry down his philosophical writings, by representing them as favouring *atheism*.† This was their usual mode of warfare when the established tenets of the Schools were attacked by any formidable opponent. The Aristotelians of all descriptions appear to have early manifested a decided hostility to his philosophy; and their criticisms are sometimes expressed in a way which proves that it had made considerable progress. The examination of his *Sylva Sylvarum*, by Alexander Ross, now much better known by Butler's sarcastic allusion in *Hudibras*, than by any of his own multifarious productions, furnishes a curious example. It was published in the year 1652, that is, about twenty-five years after Bacon's death. 'I have,'

*on Learning*. This work was first published in 1699. The author, who was a Fellow of St. John's College, Cambridge, was deeply read in the history of that University. His extensive collections upon that subject are deposited in the British Museum.

\* Bacon's Letters to Sir Toby Matthew, *Works*, iii. 247, 257.

† *Miscellany of Essays, Paradozes, and Discourses*—Preface.

says he, ‘cursorily run over my Lord Bacon’s *New Philosophy*, and find that philosophy is like wine, ‘the older the better. For, whereas Aristotle had, ‘with infinite pains and industry, and not without ‘singular dexterity, reduced all entities into certain ‘heads, and placed them in ten classes or predicaments to avoid confusion, and that we might, with ‘the more facility, find out the true genus and difference of things; which Aristotelian way hath ‘been received and approved by all Universities, ‘and the wise men since his time in all ages, as ‘being the most consonant to reason: yet these *New Philosophers*, as if they were wiser than all the ‘world besides, have, like fantastic travellers, *left the old beaten path, to find out ways unknown*, and have ‘reduced his comely order into chaos; jumbling the ‘predicaments so together, that their scholars can ‘never find out the true genus of things.’\* The examples which he adduces in illustration of this disorder, are in fact proofs of the growing taste for experimental inquiry; and it is clear from the context of the whole passage, that Bacon was considered

\* *Arcana Microcosmi*, or the hid secrets of Man’s body discovered; with a refutation of Lord Bacon’s *Natural History*, p. 263-4.

by the Aristotelians as having been its chief promoter.

That *New Philosophy* which had already produced so much embarrassment among the followers of Aristotle, had also led to the formation of a Philosophical Society, destined, at no distant day, to realize, in some measure, one of Bacon's favourite projects. In his letter to King James, written on the publication of the *Novum Organum*, he states that his chief object in publishing the work, before completing it according to his original plan, was, to procure help towards compiling an 'experimental history of Nature.'\* He more than once alludes, in the work itself, to the great things that might be accomplished in philosophical inquiries, by a conjunction of labours; and in a romance called the *New Atlantis*, he gives an account of a supposed *College* or *Society*, magnificently endowed, whose business was the improvement of all departments of physical knowledge. To this College he gives the name of *Solomon's House*. The intention of this piece evidently was, to exhibit a grand and alluring representation of the advantages that might be derived from the cooperation of numbers

\* Bacon's *Works*, iii. 584.

in scientific pursuits, and of the renown that a Prince might acquire by founding an institution for such purposes. These views and schemes were not forgotten by his followers. In the year 1645, a society was formed in London, for the discussion of subjects connected with Natural Philosophy, at stated weekly meetings; and the name first given to this society appears to have been that of the *Philosophical College*.\* Some of its members being soon after appointed to professorships in the University of Oxford, a similar society was established by them in that place. In the year 1659, the principal members of the Oxford branch having returned to London, the two societies were united; and having, on the Restoration, endeavoured to obtain a public establishment, they, in 1662, succeeded in accomplishing that object, and were erected into a corporate body under the title of the *Royal Society*.

There can be no doubt whatever of the influence of Bacon's suggestions upon the minds of those who planned the establishment of this celebrated Society. Its earliest panegyrists and historians bear testimony

\* See Boyle's *Life*, prefixed to his Works, p. 34. This Society was sometimes called the *Invisible College*. Ibid. pp. 40, 42.

to this fact. ‘*Solomon’s House, in the New Atlantis,*’ was a prophetic scheme of the Royal Society.’ These are the words of Glanvill, in his address to that body, prefixed to his *Scepsis Scientifica*, published in 1665.\* Bishop Sprat, whose *History of the Royal Society*, published in 1667, received its public sanction, expresses himself as follows: ‘The Royal Society was

\* The *Scepsis Scientifica* is a republication, with some additions, of Glanvill’s first work, *The Vanity of Dogmatizing*, published in 1661. The 20th chapter of this work contains a very distinct statement of the important doctrine so often ascribed to Mr. Hume,—that we never *perceive causation* in the succession of physical events; a doctrine which proves the object of physical science to be, not the investigation of the efficient causes of phenomena, but of the general laws by which they are regulated; and for which statement of its legitimate objects, it is always to be remembered, that *physics* is indebted to *metaphysics*. The Aristotelians were provoked by the free spirit of inquiry, and disregard of the authority of their master, which this work displayed; and an answer to it appeared in 1663, in a book entitled *Sciri, sive Sceptices et Scepticorum à jure disputationis exclusio*. The author was Thomas Albius (White), a secular priest of the Romish Church, and a noted Aristotelian. ‘Hobbes,’ says A. Wood, ‘had a great respect for White, and when he lived in Westminster, he would often visit him, and he Hobbes; but they seldom parted in cool blood: for they would wrangle, squabble, and scold about philosophical matters like young sophisters, though either of them was eighty years of age. Hobbes being obstinate, and not able to bear contradiction, those who were sometimes present at their wrangling disputes, held that the laurel was carried away by White.’—*Athene Oxon.* ii. 665. The *Scepsis Scientifica* has, appended to it, a reply to the animadversions contained in White’s *Sciri* upon *The Vanity of Dogmatizing*.

'a work well becoming the largeness of Bacon's wit  
'to devise, and the greatness of Clarendon's prudence  
'to establish.'\* Sprat also informs us, that the tract published in 1661 by Cowley, entitled, *A Proposition for the Advancement of Experimental Philosophy*, 'very much hastened the contrivance of the platform of the Royal Society ;' and this tract bears internal evidence that its author's views were derived from the *New Atlantis*.

But it is of more importance to show, that the philosophical spirit which actuated the founders of this institution, was chiefly owing to the effects produced by Bacon's writings. And here again I must appeal, in the first place, to the testimony of those to whom we are indebted for all that we know of its early history. The fullest account of its origin is given by the celebrated mathematician Dr. John Wallis, who was one of those who instituted the weekly meetings held in London in 1645 ; and his narrative distinctly points to Bacon, as having given a beginning to the taste for experimental science in England. 'Our business,' says he, 'was

\* Copies of Sprat's work were sent, by the Society, to foreign princes, and other eminent persons abroad, in order to furnish them with an authentic account of its history. See Dr. Birch's *History of the Royal Society*, ii. 207.

'to discourse and consider of things appertaining  
'to what hath been called the *New Philosophy*,  
'which, from the times of Galileo and Lord Ve-  
'rulam, hath been much cultivated abroad, as well  
'as with us in England.'\* Sprat always speaks  
of Lord Bacon as the founder of that experimental  
school which came to be embodied in the institu-  
tion whose history he wrote; and the testimony  
of Mr. Oldenburg, its first Secretary, though a  
foreigner, is equally explicit. 'The enrichment of  
'the storehouse of *Natural Philosophy*, was a work,'  
says he, '*begun by the single care and conduct of the*  
'*excellent Lord Verulam*, and is now prosecuted by  
'the joint undertakings of the Royal Society.'†  
Glanvill, whose zeal in defending this Society  
against the attacks of its enemies, well entitles him

\* See his *Account of his own Life*, in a Letter published in the Appendix to *Hearne's Preface to Langtoft's Chronicle*, No. ix.

† *Philosophical Transactions*, No. xxii., p. 391. Oldenburg frequently alludes to Bacon as the *chief* promoter of experimental philosophy. 'When our renowned Lord Bacon had demon-  
'strated the methods for a perfect restoration of all parts of real  
'knowledge, *the success became on a sudden stupendous*, and effec-  
'tive philosophy began to sparkle, and even to flow into beams  
'of bright shining light all over the world.'—Pref. to *Philoso-  
phical Transactions* for 1672.—'Many of the chief Universities in  
'Christendom have formed themselves into philosophical societies,  
'and have largely contributed their aids to advance Lord Bacon's  
'design for the instauration of arts and sciences.'—Pref. to *Phi-  
losophical Transactions* for 1677.

to respectful notice in the history of philosophy, makes frequent acknowledgments to the same purport. The following passage in a work which he wrote in its defence, and published in 1668, under the title of *Plus Ultra, or, the Advancement of Knowledge since the days of Aristotle*, is too remarkable to be omitted on the present occasion.

'The philosophy that must signify either for light  
'or use, must not be the work of the mind turned  
'in upon itself, and only conversing with its own  
'ideas; but must be raised from the observations  
'and applications of sense, and take its accounts  
'from things as they are in the sensible world. The  
'illustrious Lord Bacon hath noted it as the chief  
'cause of the unfruitfulness of the former methods  
'of knowledge, that they were but the exercises of  
'the mind making conclusions, and spinning out  
'notions from its own native store; from which way  
'of proceeding nothing but dispute could be expected.  
'He therefore proposed another method, which was,  
'to reform and enlarge knowledge by observation  
'and experiment; to examine and record particulars;  
'and to rise by degrees of induction to general pro-  
'positions; and from them to take observation for  
'new inquiries; so that nature being known, may

'be mastered, and used in the service of human life.  
'This was a mighty design, groundedly laid, and  
'happily recommended by the glorious author; but  
'to the carrying it on, it was necessary there should  
'be many heads and many hands, and those formed  
'into an assembly that might intercommunicate their  
'trials and observations. This the great man de-  
'sired, and formed a Society of experimenters in  
'a romantic model; but he could do no more; his  
'time was not ripe for such performances. *These*  
'things, therefore, were considered by the later virtuosi,  
'who several of them combined together, and set them-  
'selves to work upon his grand design.'\*

\* *Plus Ultra*, pp. 52, 87, 88. There are some who would persuade us, that the taste for experimental philosophy was introduced into England from the Continent, and that the first idea of the Royal Society was copied from similar associations abroad. This, certainly, was not the language of the founders and early historians of that Society. It is curious to remark, that while some of our own writers ascribe its origin, and the philosophical spirit which gave it birth, to foreign influences, there are, on the other hand, foreign writers who trace the Academies of the Continent to the effects produced by the writings of Bacon. The following passage is extracted from a very learned *History* of one of the earliest of these Academies.  
'Sed, quæ superest dicenda, supremam, et, ut nobis videtur,  
'proximam condendæ Academias enarrabimus occasiōnem. Sci-  
'licet postquam, ineunte circiter priori seculo, non inter Bri-  
'tannos solum, sed universi quoque orbis incolas, immortalitati  
'commendatissimus, Franciscus Baco de Verulamio, supremus  
'regni Britannici Cancellarius, variis iisque ad sapientiæ normam

Similar testimonies occur in many other publications of that day; in the more obscure as well as the more noted. Indeed there is no room whatever for doubt, that Bacon was generally considered as the *chief* promoter of genuine physics, at a period when the erection of the Royal Society would naturally bring forward the name of any individual, whose labours had contributed, in any remarkable degree, to foster their growth. Cowley, surely, will not be rejected as an evidence of the general sentiment, merely because he has recorded his testimony in verse. He was, as already mentioned, a zealous advocate for a public institution for the promotion of experimental philosophy; and, on the establishment of the Royal Society, he addressed to it that celebrated Ode in which he

'elucubratissimis scriptis, utilissima emendandæ atque instaurandæ historiæ naturalis dedisset consilia, et absolutissimis rationibus firmasset: non Angli modo haud incassum se moneri atque excitari passi sunt, sed extera quoque gentes, imprimis Galli Italique, sanioris consilii patientes, tanta contentione cum quilibuscunque scientiis generatim, tum præcipue rerum naturalium studio animum intenderunt, adeo, ut ex illo tempore visi sint homines nihil, vel remotissimis naturæ visceribus abstrusum, quod non captis ex Baconis mente experimentis curiosius rimarentur, relicturi. Atque hic ardor, hec studia magnam quoque partem condiderunt Academiarum Societatumque hactenus memoratarum.'—BUCHNERI, *Academ. Natura Curiosor. Hist. cap. i. § 7.*

represents Bacon as its legislator. Dr. Henry Power calls Bacon 'the Patriarch of experimental philosophy,' in a work published in 1664, in which he details the discoveries of Galileo, Torricelli, and Pascal.\* 'It is certain,' says Mr. Havers, in the preface to a work also published in that year, 'that Lord Bacon's way of experiment, as now prosecuted by sundry English gentlemen, affords more probabilities of glorious and profitable fruits, than the attempts of any other age or nation whatsoever.'† Dr. Joshua Childrey, in the introduction to his *Natural Rarities of England*, a book of the same period, and which gave rise to a new class of publications in Natural History, states, that he gave it the title of *Britannia Baconica*, in order to indicate its connexion with those studies which Bacon had originated.‡ Anthony Wood has preserved a letter from Dr. Childrey to Mr. Oldenburg, Secretary of the Royal Society, in which he says, that he had long been engaged in the philosophical inquiries 'which form the business of that body, in

\* *Experimental Philosophy*, p. 82.

† *Philosophical Conferences*, translated from the French, by G. Havers, in two volumes folio.

‡ *Britannia Baconica, or the Natural Rarities of England*, 1661, 8vo. 'From this work,' says A. Wood, 'Dr. Plot took the hint of his *Natural History* of Oxfordshire.'

'consequence of having fallen in love with Lord Bacon's Philosophy as early as the year 1646.'\* Evelyn, one of the most active and best known of the early members of the Society, has, in several of his works, alluded to the beneficial influence of Bacon's writings. In the introduction to his *Sylva*, published in 1664, he takes occasion to state the philosophical principles by which the Society professed to be guided, in terms which clearly point to the quarter from which they were derived. 'They are not hasty,' says he, 'in pronouncing from a single or incompetent number of experiments; but after the most diligent scrutiny, and by degrees, and by wary inductions faithfully made, they record the truth and event of trials, and transmit them to posterity. They resort not immediately to general propositions upon every specious appearance; but seek light and information from particulars, that they may gradually advance to general rules and maxims.' In his *Numismata*, he speaks of Bacon's services in the following expressive terms: 'By standing up against the Dogmatists, he emancipated and set free philosophy, which had long been a miserable captive,

\* *Athenae Oxonienses*, ii. 468.

*'and which hath ever since made conquests in the territories of Nature.'*

It was about this period that Boyle was honoured with the appellation of the second Bacon,\* in compliment to his exertions to advance experimental physics; and there can be no doubt that his discoveries contributed essentially to establish the credit of the English School. Neither can there be any doubt as to the influence of Bacon's writings in determining the nature and objects of his philosophical pursuits. This is admitted, or implied, in many parts of his works.† It is clear, indeed, that he was considered by his contemporaries as a marked disciple of Bacon. 'You have,' says Dr. Beale, in a letter to Boyle, upon the subject of his discoveries, '*particularized, explicated, and exemplified those fair encouragements and affectionate directions, which Lord Bacon in a wide generality proposed.*'‡ In another letter to Mr. Hartlib, who like himself was an early and zealous promoter of the Royal Society, Dr. Beale thus emphatically expresses his feeling of the pleasure which Boyle's experimental labours were calculated

\* See Glanvill's *Plus Ultra*, p. 57.

to afford to the followers of Bacon. ‘To those that  
‘have been tired and wearied, as I have been, in  
‘the several ways of former philosophers; to those  
‘who have condescended to take deep notice of the  
‘insufficiency of conjectures and ungrounded ratioci-  
‘nations, and who have submitted their patience to  
‘the *severity* of *Lord Bacon’s inquisitions*, here are  
‘offered such pleasing refreshments, as give us the  
‘relish of that Virgilian simplicity, which was so  
‘highly admired by Scaliger in these verses:

‘Tale tuum carmen nobis, divine poëta,  
Quale sopor fessis in gramine, quale per sestum  
Dulcis aquæ saliente sitim restinguere rivo.’\*

They who have overlooked or disregarded the proofs of the connexion between what Bacon enjoined and Boyle performed, are not likely to have recognized any traces of the lights held out by the former, in the philosophy of Newton. Yet it appears undeniable that the latter was guided by principles which Bacon alone had taught; and that

\* This letter is printed in the *Life* of Boyle, prefixed to his Works, p. 63. ‘Dr. Beale was elected a Fellow of the Royal Society in 1662. Several of his papers are printed in the *Transactions*. He was a man of excellent parts, and great public spirit; and the character which his friend Mr. Hartlib gave of him was, that there was no man in the island who could be made more universally useful.’—Birch’s *Hist. of the Royal Society*, iv. 235.

his philosophy derives an imperishable character from its rigid adherence to them. To begin with the examination and comparison of phenomena, by proceeding gradually from truth to truth, till we reach the most general that can be discovered,—these are the principles of philosophizing which Bacon unfolded, and which Newton has, in the most emphatic terms, embodied with his discoveries. ‘*Quel témoignage,*’ exclaims an eminent French philosopher, ‘*rendu par le génie inventeur au génie des méthodes?*’\* Such, indeed, was the connexion between the logic of the *Novum Organum*, and the philosophy of the *Principia*, that it was only where the one was followed, that the other prevailed. The sublime Geometry of the *Principia*, says Maclaurin, was admired by all, but it was only among minds trained by Bacon’s precepts that its philosophy found a ready reception.†

To these proofs of the influence of Bacon’s pre-

\* Degerando—*Histoire comparée des Systèmes de Philosophie*, i. 396. The introduction to Dr. Pemberton’s *Account of Newton’s Discoveries*, a work, ‘the greater part of which was read and ‘approved,’ as we are told in the preface, by Newton himself, contains a summary of the doctrines of the *Novum Organum*; and its author is represented as the first who taught those rules of philosophizing which Newton followed, and which his discoveries so nobly confirmed.

† *Account of Newton’s Discoveries*, pp. 59, 60.

cepts and exhortations, reflected in the acknowledgments, the views, and the discoveries of the early founders of the English School of experimental philosophy, I have yet to add those which are furnished by the writings of its opponents and detractors. The public countenance given to that school by the erection of the Royal Society, early excited great jealousy on the part of the Universities, and a keen spirit of opposition among the remaining supporters of the Aristotelian philosophy. Sprat accordingly found it necessary, in his *History* of the Society, to employ a long argument to prove, that its establishment would be attended with no bad consequences either to religion, or to the existing seminaries of knowledge. Glanvill was obliged to enter into a serious refutation of an assertion, that 'Aristotle had more advantages for 'knowledge than the Royal Society had or could 'have.'\* The panegyrics which these writers bestowed upon the institution, and upon Bacon as

\* 'I desire the reader to know, that after Mr. Joseph Glanvill 'had written certain things against Aristotle, it was the desire 'of some scholars, that Robert Crosse, a noted philosopher after 'the ancient way, should be brought acquainted with him. In '1667, Glanvill was therefore conducted to his house, where 'Crosse did in a sufficient manner vindicate Aristotle, and did 'plentifully declaim against the proceedings of the Royal Society.'

its master, appear to have filled the followers of Aristotle with a stronger dislike to both. The most redoubtable of their champions was Dr. Henry Stubbe, who, after studying at Oxford, served for some time in Scotland with the army of the Parliament; but having on the Restoration made his peace with the Government, he was appointed King's Physician for the Island of Jamaica, whence he had lately returned to practise in his own country. He was, according to Anthony Wood, 'the most noted 'Latinist and Grecian of his age, and a singular 'Mathematician;' but he seems to have been as deficient in judgment as he was violent in temper; which last defect, his biographer in great simplicity ascribes to his 'carrot-coloured hair.'<sup>†</sup> His publications against the Royal Society, and the whole body of experimentalists, were numerous, and all of them replete with misapplied learning and vehement abuse. The course of his reasoning is not

'Glanvill being surprised, he did not then much oppose him; 'but afterwards he did, to the purpose; especially against this 'hypothesis of Crosse, that Aristotle had more advantages for know- 'ledge than the Royal Society, or all the present age had or could 'have, because he did totam peragrare Asiam.'—*Athenæ Oxon. II.* 753. See the account which Glanvill himself gives of this con- ference, *Plus Ultra*, pp. 4, 5.

<sup>†</sup> *Athen. Oxon. II.* 562, 563.

a little curious. ‘I have so small a regard for ‘deep and subtle inquiries into natural philosophy, ‘that could physic be unconcerned, could religion ‘remain unshaken, could education be carried on ‘happily, I should not intermeddle: but if we look ‘*de facto* upon those experimental philosophers, and ‘judge how little they are fitted for trusts and ‘managements of business, by their so famed *mechanical education*, we must rise as high in our ‘resentments as the concerns of the present age ‘and of posterity can animate us.’ The grounds which he more particularly assigns for entertaining these ‘high resentments’ against the experimenta-lists, are, first, their neglect and contempt of the Aristotelian logic; ‘that art,’ says he, ‘by which ‘the prudent are discriminated from fools, which ‘informs us of the validity of consequences, and ‘the probability of arguments, and which forms ‘statesmen, divines, physicians, and lawyers.’ In the next place, he contends, that the innovating spirit of their philosophy would lead to dangerous revolutions. ‘In such times as I thought it our ‘interest to subvert the monarchy of England and ‘the repute of the clergy, I was passionately ad-dicted to this *new philosophy*; for I did not

'question but the authority of all antiquity in  
'spiritual affairs would vanish, when it appeared  
'how much churchmen were mistaken in the com-  
'mon occurrences and histories of nature. How  
'rational this opinion of mine was, and how it is  
'verified in these days, let the Hierarchy and Uni-  
'versities judge.'\*

With such views of the new philosophy, this vehement Aristotelian could not but wish to decry the authority of Bacon. That he looked upon the experimentalists of that day as the disciples of Bacon, is sufficiently evident from his common mode of designating them in derision as '*a Bacon-faced generation.*'† To abuse Lord Bacon, and to depreciate his philosophical character, are accordingly his favourite topics. Nor does he leave us in any doubt as to the cause of his enmity. It was, as he expressly tells us, '*because the repute of Lord Bacon was great in that age;*' and because '*the Royal Society pretended to tread in his footsteps.*' He allows that Bacon was a wise and eloquent man; but maintains that his censures of

\* *Legends no Histories; or, a specimen of some animadversions upon the History of the Royal Society*—Pref. Lond. 1670.

† *Epistolary Discourse concerning Phlebotomy*, passim. Lond. 1671.

the ancients were unfounded. ‘Who knows not,’ he asks, ‘how *Herbary* had been improved by Theophrastus, Dioscorides, the Arabians, and other Peripatetics? who can deny that *Physic*, in every part of it, was improved by Galen and others, before the Lord Bacon ever sucked? and what accessionals had not *Chemistry* received by the cultivation of the Aristotelians, before his *House of Solomon* was dreamed of? Let us, therefore, not be concluded by the aphorisms of this Lord. Let his *insulse adherents* buy some salt, and make use of more than one grain when they read him; and let us believe better of the ancients, than that their methods of science were so unfruitful.’\* It was the confident belief of Stubbe that Bacon’s fame was wholly founded on the false notions of philosophy then entertained, and that it would fade with the recurrence of sounder views. ‘The Lord Bacon,’ says he, ‘is like great piles; when the sun is not high, they cast an extraordinary shadow over the earth, which lesseneth as the sun grows vertical.’ How vain the prophecy involved in this uncouth simile! The fame of Bacon has

\* *Lord Bacon’s Relation of the Sweating Sickness examined*, Pref. p. 5, Lond. 1671.

brightened as Science has advanced, every new discovery furnishing a fresh proof of that transcendent sagacity which enabled him so unerringly to plan and predict the indefinite enlargement of her empire.

The preceding illustrations show the influence which Bacon's writings produced in England. It remains to be inquired, whether they were productive of any similar effects in the other countries of Europe? It is the opinion of some, who are far from being otherwise sceptical as to their influence, that they were, for a long period, but little known upon the Continent, and that their direct effects were limited to England. This opinion has been avowed by one of the most ardent of Bacon's admirers, whose extensive knowledge of the history of learning, I shall not be suspected of any intention to question, by dissenting from him on this subject.

'That the works of Bacon,' says Mr. Stewart, 'were but little read in France till after the publication of D'Alembert's *Preliminary Discourse*, is, 'I believe, an unquestionable fact: *not* that it necessarily follows from this, that, even in France,

'no previous effects had been produced by the  
'labours of Boyle, of Newton, and of the other  
'English experimentalists trained in Bacon's school.'  
Mr. Stewart farther observes, 'that the merits of  
'Bacon failed, for a century and a half, to com-  
'mand the general admiration of Europe. Nor  
'was Bacon himself unapprised of the slow growth  
'of his posthumous fame. No writer seems ever  
'to have felt more deeply, that he properly be-  
'longed to a later and more enlightened age; a  
'sentiment which he has pathetically expressed in  
'that clause of his testament, where he "bequeaths  
"his name to posterity after some generations  
'"shall be past."'\*

In making these statements, Mr. Stewart seems to have overlooked a crowd of testimonies which prove in the most satisfactory manner, that Bacon's philosophical fame was *early* established, not only in France, but in all the countries of Europe, where letters were cultivated. It may also be doubted

\* *Dissertation on the Progress of Metaphysical and Ethical Philosophy.* These statements have been already questioned, in part, in the article of the *Edinburgh Review* before referred to. The author of that article contends that Bacon's *fame* was early and generally established throughout the Continent, but that it was late before any beneficial effects were produced by his *philosophy*.

whether Mr. Stewart has rightly interpreted that affecting clause of Bacon's testament to which he so eloquently alludes. There are no contemporary publications which give any countenance to the supposition, that Bacon himself thought his writings had not met with due attention. We have, indeed, his own evidence to the contrary in regard to the most important, and, as he himself says, the most abstruse of them,—the *Novum Organum*. ‘I have received,’ says he, ‘from many parts beyond the seas, testimonies touching that work, much beyond what I could have expected at the first in so abstruse an argument.’\* It seems probable, therefore, that the bequest of his name to future generations, referred rather to his *public* than to his *philosophical* character. In his act of submission to the House of Peers after his disgrace, he implored them to recollect, that there are ‘*vitia temporis* as well as *vitia hominis*,’ and he may have soothed his wounded spirit with the hope, that posterity would find an excuse for his frailties in the lax notions and practices of the age; and

\* Epistle to Bishop Andrews, prefixed to *An Advertisement touching an Holy War*, written in 1622, and published by Dr. Rawley in 1629, in a collection entitled, *Certain Miscellany Works of Lord Bacon*.

would look upon his fall, to use a comparison of his own, ‘but as a little picture of night-work, among the fair and excellent tables of his acts and works.’\* The exact terms of the clause, besides, seem to countenance the interpretation, that his hopes pointed to the greater *candour*, rather than to the greater *intelligence* of after-times. ‘My name and memory,’ says he, ‘I leave to men’s charitable speeches, and to foreign nations, and the next ages.’† But, whatever opinion may be entertained upon this point, it will appear evident in the sequel, that Bacon’s works were well known, and their beneficial effects largely acknowledged, in foreign countries, long before the period specified by Mr. Stewart.

In the first place, then, I must observe, that the testimony of such of Bacon’s contemporaries as allude to his writings, as well as of his earlier biographers and editors, is decidedly opposed to the supposition, that his fame was of slow growth upon the Continent. The information which they give upon this point, rather, indeed, supports a contrary conclusion,—that the early celebrity of his

\* *Epistle to Bishop Andrews*, prefixed to his *Holy War*.

† *Works*, iii. 677.

writings abroad, contributed to enhance their credit at home. Thus, Osborn tells us that it was the voice of foreign fame which silenced the cry of atheism, raised against them by some of the School Divines of his own country.\* Mr. Stewart dates the full acknowledgment of his philosophical merit in *England* from the period of the establishment of the Royal Society. Now, in the account of Bacon's Life, published in 1657 by Dr. Rawley, who had been for many years his domestic chaplain, it is distinctly stated, 'that his fame was greater, and sounded louder in foreign parts than at home' and it is added, 'that divers of his works had been translated more than once into other tongues, both learned and modern, by foreign pens.'† Rawley had, some years before, received a strong proof of the early celebrity of his Patron's writing abroad, in a letter from Isaac Gruter, which contains the following passage: 'Lewis Elzevir wrote me lately from Amsterdam, that he was designing to begin shortly an edition in quarto, of all the works of Lord Bacon; and he desired my advice and any assistance I could give him; to the end

\* *Miscellany of Essays, Paradoxes, and Discourses*, Preface.

† *Life*, prefixed to Rawley's *Resuscitatio*.

'that, as far as possible, these works might come abroad with advantage, which have been long received with the kindest eulogies, and with the most attested applause of the learned world.'\* This letter was written in 1652, only twenty-six years after Bacon's death; and the important statement which it contains, in regard to the early impression made by his writings in foreign countries, will be found fully corroborated by a more particular examination of their literary records.

With respect to France, the only direct authority to which Mr. Stewart refers, when he states it as 'an unquestionable fact,' that Bacon's writings were little known in that country till after the publication of the *Encyclopedie*, is that of Montucla. After quoting a short passage to that effect from the preface to his *History of Mathematics*, Mr. Stewart farther remarks that 'Bayle has devoted to Bacon only twelve lines of his Dictionary.' But, surely, no weight whatever can be attached to this cir-

\* Tennison's *Baconiana*, p. 229.—Dr. Watts, in the *Dedication* prefixed to his translation of the *De Augmentis Scientiarum*, published in 1674, speaks of Bacon 'as an author well known in the European world.'—Dr. Shaw, in the *Preface* to his edition of Bacon's Works, published in 1733, says, that 'foreigners appear to have extolled him in a superlative manner.'

cumstance, when it is recollect that Bayle has not devoted a single line of that work, in the shape of a separate article, either to Galileo or Descartes. I must, besides, observe, that his notice of Bacon, scanty as it is, yet contains enough to show, that Montucla's statement is not well founded. It mentions, generally, that Bacon's writings 'had been favourably received by the world;' that the *De Augmentis Scientiarum* had been reprinted at Paris in 1624, being the year after it was published in London; and refers to some high eulogiums which had been pronounced by French writers upon that work. It farther states, that several editions of a French translation of his moral and political pieces had been called for, within a short period after its publication; a circumstance which Bayle casually notices in another of his works, the *Reponse aux Questions d'un Provincial.*\*

That Bacon's philosophical views were well known in France before his death, is a fact, for

\* Chap. 9. *Troisième partie.*—Bacon's *Essays*, and his *Advancement of Learning*, were translated into French a considerable time before his death. His *Natural History*, and *New Atlantis*, were translated into that language by Pierre D'Amboise in 1631. Bacon's works, says this writer, 'deserve a place in all libraries, and to be ranked with the noblest literary monuments of antiquity.'

which we have an authority the more satisfactory, from its being that of the biographer and disciple of his great French rival. ‘While Descartes,’ says Adrian Baillet, in his copious and instructive life of that philosopher, ‘was in Paris in 1626, he heard ‘the news of the death of the Lord Chancellor ‘Bacon, which happened in April of that year. ‘The intelligence very sensibly affected those who ‘aspired to the re-establishment of true philosophy; ‘and who knew that Bacon had been labouring in ‘that great undertaking for several years before his ‘death. The accomplishment of this heroical de-‘sign,’ continues this devoted Cartesian, ‘was re-‘served for a still more extraordinary genius; but ‘the praises which Bacon received were justly due, ‘even from those who did not approve of his plan ‘for the reformation of philosophy.’\* Baillet admits that Bacon’s example may have been of some use to Descartes, inasmuch as it was calculated to encourage him to abjure the authority of the ancients, and to re-establish the sciences upon a new foundation. He also observes, that Descartes thought Bacon’s method very well suited to the views of those who were willing to incur the expence and

\* *Vie de M. Descartes*, i. 147, 148.

trouble of instituting experiments.\* In making this observation, he refers to some remarkable passages in Descartes's letters to Father Mersenne, one of which is as follows: ' You formerly wrote me, that ' you knew persons who were willing to labour for ' the advancement of the sciences, at the cost of ' all sorts of observations and experiments: now, if ' any one who is inclined this way, could be pre- ' vailed upon to undertake a history of the appear- ' ances of the heavenly bodies, to be drawn up ' according to the *Verulamian method, without the admixture of hypothesis*; such a work as this ' would prove of great utility, and would save me ' a great deal of trouble in the prosecution of my ' inquiries.'†

Thus it is clear, that more than a hundred years before the appearance of the *Encyclopedie*, Bacon's

\* *Vie de M. Descartes*, i. 148, 149.—Descartes was about thirty years of age at the period of Bacon's death, and did not publish any of his principal works till several years after that period.

† *Lettres de M. Descartes*, iv. 210, Paris edit. 1724.—It appears from the following passage in one of Sir Kenelm Digby's letters to Fermat, the rival of Descartes in mathematical science, that this eminent geometer was a great admirer of Bacon: ' Je ne s'çaurois m'empêcher de vous envoyer quelques vers que le plus grand genie de notre Isle pour les Muses écrivit au Chancelier Bacon, qui étoit son grand ami, et que vous témoignez être fort le vôtre en le citant souvent.' 13. Fev. 1658.—*Lettres de M. Fermat*, p. 198, annexed to his *Opera Mathematica*.

writings had attracted so much notice in France, as to force them upon the attention of those who were but little disposed to relish their philosophy. It rather appears, that the first doubts that were entertained as to the sufficiency of the method of Descartes, originated among those of his countrymen who had imbibed the spirit of Bacon's logic. The doctrines of the *Novum Organum* are professedly taken as the basis of the argument, in a letter addressed to Descartes in 1648, by a correspondent who wishes to convince him, that in physical science, no principles ought to be admitted but such as have been previously derived from facts.\* In a treatise by a different author, written some years later, entitled *Remarques sur la Methode de Descartes*, Bacon's method is characterized as follows: 'One sees so much judgment in the rules laid down in the *Novum Organum*, for guiding the understanding in the search of truth, that one might almost believe its author had been inspired. 'This work, indeed, has some defects, particularly in its language, which is often scholastic and fanciful: but far from wishing to dwell upon them,

\* *Lettre première à M. Descartes*, prefixed to his *Treatise on the Passions*, Paris edit. 1726.

'we ought to proclaim, that it is only since the time of Bacon, that the human mind has followed a proper plan in matters of philosophy.'\* It is worthy of notice, that the author of this eulogium speaks of the Royal Society of London, then recently established, in terms of great approbation, and as being likely to realize Bacon's views for the advancement of science.

Gassendi was one of the earliest disciples of Bacon in France, and also one of the earliest and most strenuous opponents of Descartes. He has characterized the principles of philosophizing which these two reformers respectively professed, in a very clear and able manner, in the tenth and eleventh chapters of his treatise *De Logice origine et varietate*.† The reformation attempted by Bacon, is there pronounced a truly great and heroical undertaking. In another work, his valuable account of his celebrated friend Peiresc, there is a passage in which Bacon is mentioned in a way particularly deserving of notice in the present discussion. 'No man,' says Gassendi, speaking of his friend, 'made more observations, or caused more to be made,

\* *Remarques sur la Methode de Descartes*, pp. 128, 129; annexed to his *Discours de la Methode*, Paris, 1724.

† Gassendi, *Opera*, tom. i.

'to the end, that at last some notions of natural things, more sound and pure than those commonly received, might be collected; for which reason he admired the genius, and approved the design of that great Chancellor of England, Sir Francis Bacon.\* Now, Peiresc died in 1637, only eleven years after Bacon. But this is not all. He was the first man in France, according to Bailly, who deserved the name of an astronomer;† and he, as well as Gassendi (who was also distinguished as an astronomer), was a correspondent, friend, and admirer of Galileo: yet we see that Bacon was considered by both as the great leader of reform in Natural Philosophy.

There are many similar testimonies in the writings of those who were conversant with the French experimentalists. That furnished by Sorbière, in his *Relation d'un Voyage en Angleterre*, published in 1664, is entitled to greater consideration from his having for some time acted as Secretary of one of those associations of Parisian philosophers in which the *Academy of Sciences* had its origin.‡

\* *Life of Peiresc*, Book vi. p. 207 of the English translation.

† *Histoire de l'Astronomie Moderne*, liv. iii. § 20.

‡ Birch's *History of the Royal Society*, i. 27.

'Ce grand homme,' says he, speaking of Bacon, 'est sans doute celuy qui a le plus puissamment solicité les interests de la physique, et excité le monde à faire des expériences.' A similar observation is made, and in words equally strong, by the Abbé Gallois, in one of the numbers of the *Journal des Savans*, published in 1666; a year signalized by the establishment of the *Academy of Sciences*.\* Bacon is also represented as the father of the inductive or experimental method, by John Baptiste du Hamel, who first held the office of Secretary to that Academy. His treatise *De Mente Humana*, published in 1672, contains several chapters of commentary upon Bacon's philosophy.† We are told by Fontenelle, that Du Hamel was censured by his contemporaries as not being sufficiently regardful of the merits of Descartes.‡ But with the views which he seems to have imbibed from the writings of Bacon, he could have been but little disposed to look up to Descartes as the oracle of philosophy.

\* 'On peut dire que ce grand Chancelier est un de ceux qui ont les plus contribué à l'avancement des sciences.'—*Journal des Savans*, du 2. Mars, 1666.

† Lib. i. cap. 3. § 7; Lib. iii. cap. 6—9.

‡ Fontenelle, *Eloge de Du Hamel*.

It would be superfluous to proceed any farther in accumulating French authorities. The preceding deduction is sufficient to establish, that there is no foundation for the supposition, that Bacon's writings were little known in France previous to the publication of the *Encyclopedie*; and that they had, at a much earlier period, made a great impression in that country. I shall, therefore, go on to inquire, whether there are any proofs of equally early attention having been paid to them by the other nations of the Continent.

That the philosophy of Bacon had attracted considerable notice in Italy during his lifetime, is evident from his correspondence with Father Fulgentio, from which it appears that the Venetian philosophers were extremely inquisitive about his writings.\* And his correspondence with Father Baranzan proves that the *Novum Organum* was known, and had found eager readers, in the north of Italy, at a surprisingly early period. Baranzan was a Piedmontese monk of the order of Barnabites, and officiated as a Professor of Philosophy and Mathematics in the Colleges of his order. He had early distinguished himself as a writer on philoso-

\* Tennison's *Baconiana*, pp. 196, 197.

phical subjects, and as an opponent of Aristotle. After perusing the *Novum Organum*, he appears to have begun a correspondence with Bacon, one of whose letters to him is fortunately preserved in the account of Baranzan in Niceron's *Memoirs*.\* This letter is dated in 1622, only two years after the publication of the *Novum Organum*; and was evidently written in answer to some queries of Baranzan touching its fundamental doctrines. The whole letter is on this account extremely interesting; but the following passage is peculiarly calculated to show how much philosophy then stood in need of such a guide as Bacon. 'De multitudine instantiarum, quæ homines deterrere possit, hæc respondeo: quid opus est dissimulatione? Aut copia instantiarum comparanda, aut negotium deserendum. Aliæ omnes viæ, utcunque blandiantur, imperviæ.' It is worthy of notice that Bacon concludes this letter with an earnest request, that Baranzan would employ himself in framing a description of the heavenly bodies, exactly of the kind which Descartes afterwards

\* 'Elle est trop interessante,' says Niceron, who possessed the original letter, 'et fait trop bien connoître la maniere de philosopher, qu'ils vouloient tous deux introduire, pour ne la point communiquer au publicque.'—*Mémoires pour servir à l'Histoire des Hommes Illustres*, iii. 43.

wished some competent person to undertake; as mentioned in his letter, before quoted, to Father Mersenne. But this ingenious Italian was not permitted to profit by the exhortations of his illustrious correspondent, for he died soon after the date of this letter, at the early age of thirty-three.

There is a letter from Sir Toby Matthew to Bacon, which contains a curious piece of information, not hitherto, I believe, particularly noticed. It was written from Brussels in 1619, when Sir Toby was on his return to Florence, where, during a former residence, he had published an Italian translation of Bacon's *Essays*. 'There was with me to-day,' says he, 'one Mr. Richard White, who had spent some time at Florence, and is now going to England. He tells me that Galileo *had answered* your discourse concerning the flux and re-flux of the sea, and was sending it unto me; but that he hindered Galileo, because his answer was founded upon a false supposition; namely, that there was in the ocean a full sea but once in the twenty-four hours. But now,' adds Sir Toby, 'I will call upon Galileo again.'\* As the discourse on the *Tides*, here alluded to, was not published till several years

\* Bacon's *Works*, iii. 662.

after Bacon's death,\* it must have been sent to Galileo in manuscript. What farther communication took place upon the subject, does not appear. Galileo, so far as I knew, makes no allusion to any of Bacon's writings; though the circumstance just mentioned, and their unquestionable notoriety in Italy during his time, render it difficult to believe that he had not perused them. The following passage, in a letter written from Italy to the Earl of Devonshire, near, but before the time of Bacon's death, furnishes an additional proof of that notoriety. 'Lord Bacon,' says the writer, '*is here more and more known, and his works more and more delighted in.*'†

There was an Italian philosopher of that period, whose ardent genius the cruel torture of the rack and twenty-seven years' imprisonment had not been able to repress; who fortunately found a friend, to publish in Germany the works which he penned in the prisons of Naples; and who has had the

\* It was first published, I believe, by Isaac Gruter in 1653, in the collection entitled *Fran. Baconi de Verulamio Scripta in Naturali et Universali Philosophia*, 12mo. Amst. The tracts contained in this collection were given to Gruter by Sir William Boswell, the English Resident in Holland, to whom Bacon had committed them by his will.

† See Bacon's Life, prefixed to Rawley's *Resuscitatio*.

honour to be ranked with Bacon, by no less a judge of philosophical merit than Leibnitz. This was Campanella. 'If,' says Leibnitz, 'we compare Descartes and Hobbes with Bacon and Campanella, the former writers seem to grovel upon the earth,—the latter to soar to the heavens, by the vastness of their conceptions, their plans, and their enterprises.' 'After looking,' says Mr. Stewart, (from whose stores of varied erudition I have borrowed this quotation,) 'into several of Campanella's works with some attention, I must confess, I am at a loss to conceive upon what grounds the eulogy of Leibnitz proceeds.' But, however just Mr. Stewart's surprise, Leibnitz was not the first who conjoined the names of Bacon and Campanella. Tobias Adams, who edited those works which Campanella wrote in prison, tells us, in his introduction to the *Realis Philosophia* of the latter, published at Frankfort in 1623, that Campanella, like the great Verulam, took experience for his guide, and drew his philosophy from the book of nature.\* The comparison here is as unsound as the eulogy of Leibnitz is excessive; but it is remarkable as showing that Bacon's phi-

\* *Realis Philosophiae Epilogisticae partes quatuor; hoc est, de rerum natura, hominum moribus, politica, et oeconomico; cum adnot. Thob. Adami.*

losophy was known and appreciated, at this early period, in Germany. We have another illustration of the early diffusion of his views in that country, in Commenius's *Synopsis Physicæ ad lumen divinum reformatæ*, published in 1643, in which the author speaks of the *Novum Organum* in the highest terms of praise; and warns his readers that it was not his wish to interfere with the great plan of discovery which it proposes; but to make trial whether the lights of Scripture might not assist in the interpretation of nature.\*

Among the German writers of the *latter* half of the seventeenth century, who either professedly or incidentally treat of the history of philosophy, there are various references to the writings of Bacon, coupled with the strongest acknowledgments of their beneficial influence. Some of them even ascribe to

• ‘Ego quia in lumine Dei lumen videre visus sum, temperare mihi non potui, quin, advocato in auxilium Deo, novas naturalium hypotheses in novam methodum redigere, discipulisque Scholæ hujus dictare, tentarim. Non quod magni Verulamii consilio (qui ab axiomatibus, antequam de omnibus et singulis plenæ per universam Naturam inductiones exstant, abstinentem esse censet) adversus ire vellem; sed ad capiendum interea experimentum, numnam ratione hac plus luminis, ad Naturæ arcana facilius observandum, inferri possit mentibus.’—Præf.

In this work, also, Campanella is mentioned in conjunction with Bacon, for reasons which render the passage deserving of notice here. “Videat autem qui volet Campanellam et Verula-

him merits which have been disclaimed by the more discriminating of his English admirers. Thus Morhof, besides the other praises which he lavishes upon Bacon, affirms that his works contain the germs of many important discoveries in physics, the glory of which, though wholly reaped by others, was partly due to him.\* His services to physics are more correctly indicated by another well-known German writer of that period, namely, Baron Puffendorf. ‘It was the late Chancellor Bacon,’ says he, ‘who raised the standard, and urged on the march of discovery; so that if any considerable improvements have been made in philosophy in this age,

mium (hos enim Hercules, qui debellandis monstris expurgansque Augiæ stabulis, feliciter admoverunt manus commonistrasse; et illis, quos Aristotelice vanè turgidæ Philosophie dementatos tenet authoritas, opposuisse, sufficiat); et quam sèpè à vero aberrent Aristotelice assertiones, palpare poterit.’—Praef.

\* *Polyhistor.* tom. ii. lib. 2, cap. 1. Morhof gives the following account of a work published in Hungary in 1663, in which an attempt was made to explain the principles of Bacon’s philosophy. ‘Ex mente Verulamii quædam in sua universalí methodo instituere voluit Johannes Bayerus, libro cui titulus: *Filum Labyrintri, sive Lux mentium universalis, cognoscendis, expendendis et communicandis universis rebus accensa.* Verum obscurat potius Verulamii sensus omnemque philosophiam, quam ut lumen aliquod accendat.’—tom. i. lib. 2, cap 7. The title of Bayer’s work is, partly, that of one of Bacon’s philosophical fragments, (*Filum Labyrintri*); and it shows that his writings had early engaged attention, even in the more obscure parts of the Continent.

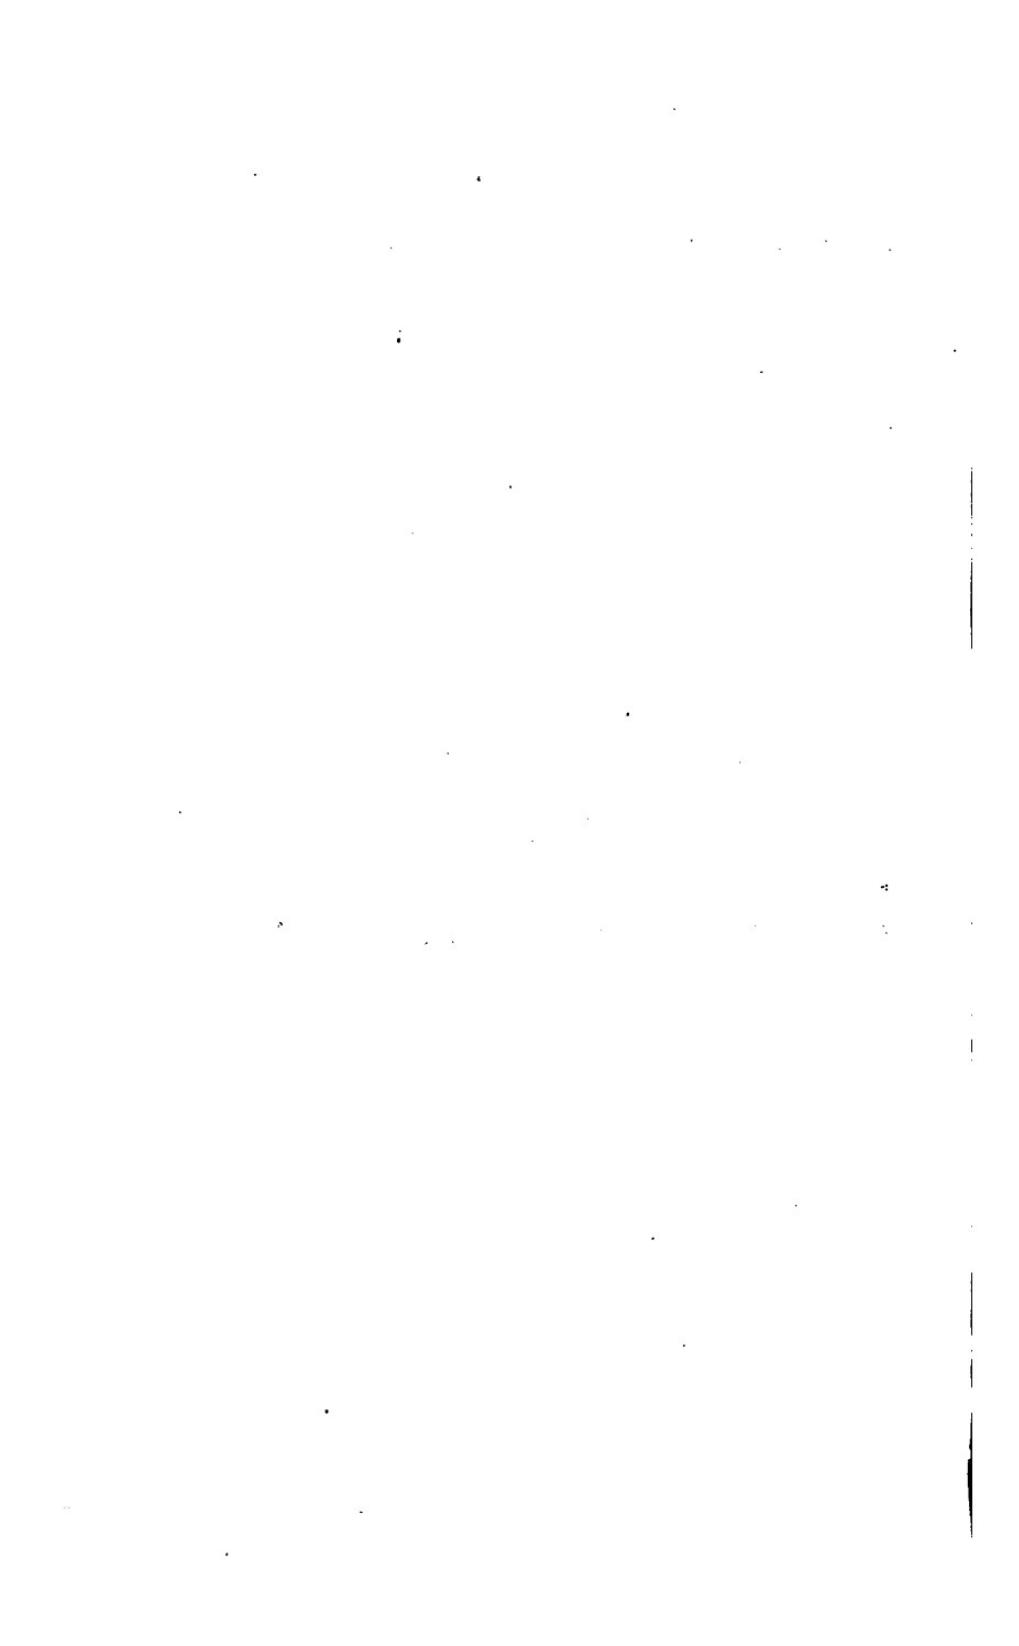

'there has been not a little owing to that great  
'man.'\*

Descending somewhat lower in point of time, though keeping still within the period of the supposed abeyance of Bacon's fame on the Continent, we find Buddæus, a writer of unquestionable knowledge, representing him as having completed the overthrow of Aristotle, and as having not only described the true method, but powerfully accelerated the progress of scientific discovery.† I shall only add one authority more, that of a celebrated Dutch writer of the same day, himself an eminent improver of science in several of its branches; and who was placed in a situation, which, in a particular manner, enabled him to collect the general sentiment of Europe upon any point connected with the history of philosophy. I here allude to Boerhaave; who, in his Discourse *de comparando certo in Physicis*, delivered before the University of Leyden, when he laid down the office of Rector in 1715, pronounced an eulogium upon the merits and services of Bacon, which I am happy to extract as a conclusion and

## **SIR WALTER RALEIGH.**

THE name of Sir Walter Raleigh is unquestionably one of the most renowned and attractive, and in some respects the most remarkable in English story. He acted a part in all the various functions of public life, military, naval, and civil; and was illustrious in all. He was a projector on the grandest scale, an improver of naval architecture, a founder of colonies, a promoter of distant commerce. As the introducer or disseminator of two important articles of subsistence and luxury,\* he in a vast degree contributed to augment the food, and to modify the habits of all the nations of Europe. His fortunes were alike remarkable for enviable success and pitiable reverses. Raised to eminent

\* Potatoes and Tobacco.

station through the favour of the greatest female sovereign of England, he perished on the scaffold through the dislike and cowardly policy of the meanest of her kings. To crown all, his fame in letters as the author of that memorable work with which ‘his prison hours enriched the world,’ placed his name in glorious association with those of Bacon and Hooker, as it otherwise was with those of Essex and Vere, of Hawkins and Drake.

The appearance of a uniform edition of his extensive works,\* and of three different histories of his life, seems to show that the public interest in regard to him has not abated. But we do not hesitate to say, that a life of Raleigh, written upon sound principles, and possessing all the attainable information, is still a *desideratum*; as is an edition of his works, in which the authenticity of every piece has been thoroughly sifted, the objects and character of each adequately explained, and the whole arranged with the requisite care. We are not without the hope of being able to furnish some information, calculated to aid the

\* *The Works of Sir Walter Raleigh, Kt. Now first Collected. To which are prefixed the Lives of the Author by Oldys and Birch. 8 vols. 8vo. Oxford, 1829.*

labours of any one who, either as biographer or editor, may be induced to make another attempt to supply *desiderata* so much to be regretted. If we should be successful in this, we may hope to be excused for the length of our observations; especially when it is considered, that there are manuscript materials of very considerable value unknown to, or untouched by his biographers; that all the more important and interesting transactions and occurrences of his life are involved in obscurity, or perplexed with doubt; that his views, in his greatest undertakings, are liable to question; and that the usual tendency of biographers to easy faith and indiscriminate praise has in his case been carried to the greatest extreme.

The early biographical publications of Naunton, Prince, Fuller, Wood, and Aubrey, contain some interesting particulars of Raleigh: but the first account of his life upon an extended and elaborate plan, was that by Mr. Oldys; originally prefixed to the eleventh edition of the 'History of the World,' which appeared in 1733. Prior to this performance, there appeared successively lives by two obscure writers, named Shirley and Theobalds. Oldys's work has nothing in biographical writing

of superior merit, so far as careful and extensive research are concerned. It is rich in curious information; and refers to a greater number of rare tracts, than any other piece of biography in our language. But these are its only recommendations. The style is feeble and uncouth as well as affected; and the author's judgment is never once exercised in any rational or independent estimate of the actions and conduct he narrates, however questionable or censurable. Gibbon has truly characterized it, 'with reference to these defects, as 'a servile panegyric, or a flat apology.'

A new biography of Raleigh was one of the early literary projects of that great historian; but which, after a good deal of inquiry and hesitation, he ultimately abandoned, from finding great want of information, regarding some of the most important parts of his public, as well as the whole of his private life. Details concerning the latter are still nearly as scanty as ever; but some new and valuable materials for the illustration of the former have, from time to time, been brought to light, both from national and private repositories. Dr. Birch availed himself of such additions as had then appeared, particularly of the anecdotes con-

tained in the Sidney and Bacon Papers, in the brief account of Raleigh with which he prefaced a collection of his miscellaneous writings, published in 1751. In other respects, it was a mere abridgment of Oldys, without any marked superiority of judgment or style. These two lives, either from ignorance of their defects, or a singular destitution of biographical resources, have been prefixed, without alteration or emendation, to the edition of Raleigh's works published by the Directors of the Clarendon Press.

After the lapse of more than half a century from Dr. Birch's publication, Mr. Cayley produced a life of Raleigh, which, judging from its compass (two volumes octavo), might well be expected to furnish some important additions to his history; but its bulk arises from its being interlarded with republications of all those pieces in which either Raleigh himself, or others employed by him, were narrators; on the ridiculous pretext that they form parts of his history, for which the reader ought not to be sent to any other quarter. The work is not, however, without value; for it contains some original papers of considerable importance as materials for history. His own use of them, and of the other

publications connected with his subject that had appeared in the preceding half century, was by no means skilful; and his narrative, in other respects, is in no degree superior to those which preceded it.

It is not therefore surprising, that in a period of so much literary activity, a subject so inviting as the life of Raleigh should be resumed: but were it not that it also is a period in which books are produced, not so much in consequence of any whisperings of independent ambition, as for the purpose of aiding those literary projects to which the ingenuity of publishers so largely gives rise, we certainly should have been surprised to see three new lives so executed as to leave the subject as open as before to farther competition.

The first in the order of time is that of Mrs. Thomson,\* a lady honourably distinguished for her love of historical pursuits. All we can say of her present attempt is, that it is written in a good spirit, and that her industry in collecting materials is favourably evinced in an appendix, which con-

\* *Memoirs of the Life of Sir Walter Raleigh; with some Account of the period in which he lived.* By Mrs. A. T. Thomson. Lond. 1830.

tains several letters of importance never before published.

Mr. Tytler's work\* was undertaken mainly, as he says, to defend Raleigh against the imputations cast upon him by Hume and others, particularly with respect to Guiana, the conspiracy in which he was implicated, and his general character: and if extreme unwillingness to see or to allow any blemishes in the conduct of his hero, and an unvarying strain of eulogy, make a consummate biographer, his claim to that distinction cannot be disputed. In point of composition, his narrative is clear and pleasing; but though illustrated with some new information gleaned from the public archives, its merits in this respect are by no means so high as its pretensions had led us to expect.

Dr. Southey's account of Raleigh forms only one of a collection of 'Lives of the British Admirals,' contributed to the *Cabinet Cyclopaedia*; but it is compiled upon a scale of sufficient extent for separate publication. That it would have been a far more perfect production, had it been prompted by his

\* *The Life of Sir Walter Raleigh; founded on authentic and original Documents, some of them never before published. With a vindication of his Character from the attacks of Hume and other writers.* By Patrick Fraser Tytler. Edinburgh, 1833.

own selection of the subject, we cannot for a moment doubt: but as it stands, it is a piece of mere task-work, executed by a practised and skilful artist no doubt, but with that economy of labour and thought which may be expected to characterize such undertakings. His extensive acquaintance with Spanish literature has, however, enabled him to diversify his narrative with a few illustrations derived from the Spanish historians of America; and it is only in that respect that his work has any pretensions to novelty; for he has evidently contented himself with the materials nearest at hand, and made no attempt whatever either to correct or to amplify the existing stock of information by any researches among unpublished documents. In one respect Dr. Southey differs materially from all the other biographers of Raleigh—namely, in the freedom of his strictures upon his hero; but these, though in general substantially just, are expressed in a tone which savours more of the acrid temperament of the censor, than of the judicial dignity of the historian.

Raleigh was born in the year 1552, at Hayes, in the parish of Budley, in Devonshire. His father, a gentleman of ancient lineage but small

fortune, had been thrice married, and Walter was the second son of the last of these marriages. Of his early life and education, all that we know is, that he was entered a commoner of Oriel College, Oxford, where he remained two or three years, and greatly distinguished himself; being, according to Wood, 'esteemed a worthy proficient in oratory and philosophy'. He quitted the university, however, on the very first opening that presented itself to an active life. Queen Elizabeth had authorized the formation of a company of a hundred gentlemen volunteers, to aid the Huguenots in their memorable struggle for religious liberty; and of this distinguished body of British youths Raleigh was enrolled a member, and proceeded with it to France, under its commander, Henry Champernon, who was his near relation. There he served for five years, and was engaged in some of the greatest battles of that period; upon which he made and treasured up sundry observations, showing his genius for the science of war, which were afterwards recorded in his '*History of the World*', where he recurs, wherever he has an opportunity, to his own military experience. He appears, after a short interval, to have also served for some time in the Netherlands, under Sir

John Norris; but his biographers have not been able to recover any account of his services in that quarter, nor has he himself made any allusions to them, as in the case of his French campaigns.

Raleigh had as yet done nothing to connect his name with the public service of his country, when the outbreak of a rebellion in Ireland induced him to resume his sword in that 'lost land—that 'commonwealth of common woe,' as he, in one of his letters, described it. We accordingly find him, in 1580, commanding a company of the royal troops; and he speedily became distinguished, both for valour and skill, in those sudden and rapid movements and surprises which the service required. His exploits were so conspicuous, as to be particularly recited by the historians of the period. He continued in this employment for several years, solely for the purpose of recommending himself to notice; for in a letter to the Earl of Leicester, then Elizabeth's favourite, by whom he appears to have been patronised, he says plainly, that were it not for his hopes that way, he would disdain such a service as much as he would to 'keep sheep.' Its poverty was not its worst characteristic. It was marked throughout by ruthless cruelty; but the massacre of some

hundreds of Spaniards, who had fought in aid of the rebels, and surrendered at discretion to the Lord-Deputy Gray, was a fouler and more revolting act than ever stained the name of England. It is mortifying to think that Raleigh was one of the officers to whom the execution of this atrocious deed was committed; and yet more so, that another of the great literary ornaments of that age—the author of the ‘Faerie Queene’, who was then secretary to the Lord-Deputy, and who had not the apology of being under military command—has attempted to justify it, in his otherwise beautiful and statesman-like piece on the ‘State of Ireland,’ in which he unscrupulously avers, that ‘that short ‘way was the only way to dispose of them.’ There is no authority, in as far as we know, for allowing Raleigh the honourable distinction of having differed in opinion with his commander, in regard to this transaction. Mr. Tytler would fain believe that he did. That the Queen strongly disapproved of it is certain; as it also is, that some difference had arisen between Raleigh and the Lord-Deputy, which, after their return to England, was discussed at the Council-Board, in her Majesty’s presence; and that the former there maintained his

cause with such consummate ability as well as grace, that, to use the words of Sir Robert Naunton, ‘he got the Queen’s ear in a trice.’ But this writer, whose authority, had he so expressed himself, would have been perfectly conclusive, does not in the slightest degree intimate either that the point in discussion before the Council related to the massacre, or that the highly favourable impression which Raleigh then made upon the Queen, was owing to his having upheld his disapproval of it.

This was one of the most important and decisive moments of Raleigh’s life. His future fortunes were owing chiefly to the feelings which then arose in the breast of his sovereign. Personal recommendations went far with that great princess; and the brave soldier, whose intellectual accomplishments thus ‘gained her ear,’ was no less remarkable for his imposing exterior. The romantic incident detailed by Fuller as the immediate cause of Raleigh’s introduction to and favour with the Queen, is known to all readers of history; and it presents to the imagination a picture so pleasing, and so much in harmony with the characters of both, as to beget a strong reluctance to doubt its reality. But though there seems no reason either to question the fact,

er its having produced sentiments favourable to Raleigh, his rapid progress in Elizabeth's esteem was much more probably ascribable to the opportunity afforded for the display, both of his personal qualities and his commanding talents, in the discussion referred to by Naunton. To whatever cause, or combination of causes, his good fortune was owing, the effects were alike speedy and marked; for within some two or three years from the period when he was first noticed at court, he was Knighted, made Captain of the Guard, Seneschal of the county of Cornwall, and Lord Warden of the Stannaries: and these honours were accompanied with the substantial grant of twelve thousand acres of the forfeited principality of the Earls of Desmond, whose rebellious attempts he had assisted to quell; besides a lucrative Patent for licensing the vendors of wine throughout the kingdom.

Maritime expeditions and colonization were the favourite projects of the enterprising and active spirits of that stirring period. The ocean and the new world engrossed all their thoughts. The more daring and adventurous fitted out cruisers to intercept the Spanish ships, on their return with rich cargoes from the colonies; while those who

aimed at plantations, and the extension of commerce, looked to the northern parts of America as the appropriate field of their nobler exertions. Raleigh participated strongly of both characters; for though abundantly disposed to the courses of the maritime spoiler, his mind was deeply impressed with the more elevated views of the colonial projector. Some of the richest prizes brought into England were captured by ships fitted out by him, or in which he was a sharer. His colonial schemes constitute a marked portion of his singular history.

Some years before that period of his life at which we have arrived—namely, in the short interval which elapsed between his military services abroad and in Ireland—he appears to have engaged to accompany his celebrated half-brother, Sir Humphrey Gilbert, in a voyage to North America, in prosecution of the patent or commission of plantation—the first granted to any British subject—which the latter had obtained from the Queen. The voyage proved abortive; for the ships were forced to return to port, after encountering various disasters. Soon after the commencement of Raleigh's favour at court, Sir Humphrey had resolved to make another attempt to avail himself

of his patent; and his rising half-brother, who was now in a situation to furnish useful aid, was not slow to prove how strongly he participated in the noble views entertained by the other. Thus, in a letter written from Court in May 1583, it is stated that 'Mr. Raleigh, the new favourite, had made an 'adventure of two thousand pounds, in a ship and 'furniture thereof,'\* to form part of the fleet collected by Gilbert for his new expedition. Raleigh's presence at Court was too necessary to allow him to accompany his adventurous brother, who received from the Queen, through 'the new favourite's' hands, a golden anchor to be worn at his breast; her only contribution to an expedition intended to transplant the arts of England to the waste regions of the new world. The ship built and manned by Raleigh, at so much cost, and which bore his name, joined Sir Humphrey before his departure from Plymouth in June 1583; but within a few days after sailing, she left him and returned to port; the sickness of her crew obliging her, according to the common accounts, to put back. Captain Hayes, the historian of the voyage, expresses himself in somewhat sceptical terms as to the necessity for this separation;

\* Birch's *Memoirs of Q. Elizabeth*, i. 34.

and, if sickness was the cause, it would appear, from a brief note written by Gilbert to Sir George Peckham, that the disappointed admiral was as ignorant of it, as he was indignant at the proceeding. This note, which has been overlooked by Raleigh's biographers, was written in August, after Sir Humphrey's arrival at Newfoundland, and is thus expressed: 'I departed from Plymouth on the 11th of June with five sail, and on the 13th the bark Raleigh ran from me in fair and clear weather, having a large wind. I pray you solicit my brother Raleigh to make them an example to all knowes.'\* This expedition also proved abortive, and its brave leader perished in a storm by which he was overtaken on his return. He was one of those vigorous and versatile characters peculiar to an age which produced numbers who united in equal degrees the faculties which fit men alike for speculation and for action. Though the name of his uterine brother, who was considerably his junior, has obtained, and justly, a wider and higher fame, there were strong points of resemblance between them; and the example and instructions of the elder had, in all probability, considerable influence

\* Purchas, iii. 806.

upon the mind and pursuits of the younger. His treatise on the 'North-West Passage' displays, as Dr. Robertson has observed, 'much of that enthusiasm and credulity which excite men to 'new and hazardous undertakings:' but he might have added, that it points out, on just and enlightened principles, the advantages of foreign settlements in proper situations; representing them as means of extending and enriching commerce, and of furnishing employment to 'those needy people 'who trouble the commonwealth through want at 'home.'

The fate of his kinsman had no effect in diverting Raleigh's thoughts from those colonial undertakings to which the former fell a victim. Availing himself of his favour with the Queen, he solicited and obtained a patent, investing him with ample powers to appropriate, plant, and govern any territorial possessions he might acquire, in the unoccupied parts of North America. According to information procured by Oldys, this patent was preceded by a Memorial addressed to the Queen and Council, setting forth the utility and policy of the undertaking. Gibbon specifies the want of details respecting his Virginian schemes—which he justly viewed as a

characteristic portion of his history—as one of his reasons for abandoning the idea of a Life of Raleigh; but there is, in regard to some other important portions of his life, far greater reason to regret that want; for in as far at least as respects the different attempts to plant colonies, made at his expense and under his direction, the narratives reprinted in the invaluable collections of Hakluyt and Purchas furnish full details. It is matter of regret, no doubt, that the Memorial to which Oldys alludes has not been preserved; but Raleigh's general ideas with respect to colonization are otherwise sufficiently known. They were the same with those entertained by some other enlightened projectors of that period, whose peculiar views and merits have been entirely overlooked by those writers who have treated of the origin of our American colonies. In Dr. Robertson's sketch of their early history, the views of their founders are unnoticed; and Dr. Smith has characterized them as being in no respect different from those of the military adventurers who established the colonies of Spain. The 'thirst of gold' was, as he truly observes, the only principle of action among the latter; but when he says that all the other nations of Europe, the

English not less than the rest, were solely actuated by the same desire; he does great injustice to some who, in the latter part of the reign of Elizabeth, endeavoured to rouse their countrymen to a sense of the advantages to be derived from colonization. It is due to those men, to commemorate with deserved praise the enlightened views disclosed in their writings. The acquisition of gold and silver mines was not, by any means, the recommendation to colonial enterprise which they held out. New fields of labour in new and propitious climes—new means of employing a superfluous population—new articles of exchange, new markets, and great augmentations of shipping—were the beneficial results which they predicted from the plantation of colonies in the new world. We do not mean to say, that these views were constantly and systematically enforced; but that they constituted with many the grand recommendations to colonial enterprise.

That some of our early colonial adventurers were wholly actuated by the hope of discovering mines, is not to be denied; but that there was a more enlightened class who advocated the utility of foreign settlements upon the grounds we have stated, is equally unquestionable. Of this, the treatises written

by Gilbert, Peckham, Carlisle, Harriot, and others, and to be found in the collections above named, furnish decisive proofs. When mines are mentioned, they are not by any means represented as paramount objects; they make less figure, by much, than the ordinary objects of industry and commerce; and those who represent them as the chief sources of national wealth, are treated with derision and reprobation. These facts have not, in as far as we know, been noticed by those who have been curious in tracing the faint and scattered lights which show the first beginnings of Political Economy—a science to the history of which they undoubtedly appertain. Sir George Peckham's treatise was written in recommendation of Gilbert's project of colonizing in Newfoundland; and both it and that of Carlisle are remarkable productions for their day. Harriot's name is well known as one of the most distinguished of the early mathematicians of England; but he appears to have also possessed large views in regard to the extension of industry and commerce; and Raleigh's appointment of such a man to survey his new settlement in Virginia, was a choice which clearly showed the perspicacity of its founder's views and understanding. The

wisdom of that choice was exemplified in the methodical and instructive Report which Harriot published in 1587, after his return from the colony. It is one of the earliest, if not the first specimen in the language, of a statistical survey—for such it was, in as far as there were materials in the country described for such a production; and it furnished an example which was beneficially followed in some other publications respecting the same region. As coming within the scope of the foregoing observations, we may mention an anonymous piece written somewhat later than the period alluded to, but not later than the early part of next reign.\* It has been preserved by Purchas, a compiler known to all the world, but of whose special information connected with their own subject, the biographers of Raleigh seem to have been wholly ignorant. Though the extravagance of its conclusions respecting the importance of Virginia, and the poetical dress of its statements, may now provoke a smile, it is impossible not to be struck with the reach and soundness of its general views, and its indignant repudiation of the notion, that the precious metals alone constitute wealth, and give their sole value to

\* It is entitled *Virginia's Verger*. See Purchas, iv. 1809.

colonial possessions. ‘The very name of a colony,’ says the author, ‘imports a reasonable and seasonable culture and planting, before a harvest and vintage can be expected.’—‘Though gold and silver have enriched the Spanish Exchequer, yet their storehouses hold other and greater wealth, whereof Virginia is no less capable, namely, the country’s commodities.—What mines have they in Brazil and in the Islands, where yet so many wealthy Spaniards and Portuguese inhabit? Their ginger, sugar, hides, tobacco, and other merchandise, it may be boldly affirmed, yield far more profit to the generality of the Spanish subjects than the mines do, or have done, this last age.’—‘Who gave gold and silver the monopoly of wealth, or made them the Almighty’s favourites?—That is the richest land which feeds most men. What remarkable mines hath France, Belgia, Lombardy? What this, our fertile mother England?—Do we not see that the silks, calicoes, drugs, and spices of the East, swallow up all the mines of the West?’ These strike us as remarkable observations; and as sufficient, when viewed in conjunction with the other pieces to which we have referred, to show that justice has not been done to the primary

founders of our colonial empire; and that Dr. Smith has greatly erred in charging them with the same blind passion for gold that inflamed the Spanish adventurers.

From such inquiries Raleigh's biographers have kept aloof, although they have—particularly Mr. Tytler—diverged upon topics much less intimately connected with their subject, and in regard to which there was nothing to be told that had not often been told before. In other respects, their treatment of this portion of Raleigh's history is lame and faulty. They have left some points unnoticed in which his conduct and character are materially concerned; and as both are, unfortunately, very questionable in some after-parts of his career, it was the more necessary to do him full justice where blame cannot, with any fairness, be imputed to him.

Raleigh's Patent was granted in 1584, and by him transferred to other hands in 1589. His absence could not but augment the difficulties and chances of failure that must have been experienced in any case, where a body of cultivators and artizans was to be planted, for the first time, in a distant and unknown region. And many of

his disappointments were occasioned as well by the unskilful management of those to whom the execution of his plans was entrusted, as by the perverse conduct of the colonists; for his position as a favoured courtier, and his public employments stood in the way of his leaving England, and exercising that personal superintendence which was so much required. But all such means as he could furnish were largely afforded. His first material step was to fit out an expedition of observation and inquiry to ascertain the particular spot where it would be most advantageous to plant; and the accounts brought home by the commanders of the vessels employed in that service, were such as to encourage him to a vigorous prosecution of his design. It was these accounts, too, which induced Elizabeth to bestow the name of 'Virginia' upon the country destined to receive the adventurous colonists. In 1585, the first body that sailed from England was safely planted in that region, under the immediate government of Mr. Ralph Lane. He was accompanied by Harriot, who was commissioned to make the survey and Report to which we have already referred. That survey, and the importation for the first time of the tobacco plant,

were the only fruits of this expensive undertaking; for the misconduct of the colonists, and the hostility of the natives, rendered it necessary to re-embark the whole body within a year from the time of its leaving England. Raleigh, nowise daunted by the unfortunate issue of this attempt, took active measures to collect and send out a second body, which sailed and took possession in 1587, under the superintendence of Mr. John White. But his praiseworthy designs were again defeated, chiefly through the misconduct of the colonists themselves. The Governor was obliged to return to England for additional supplies, and new instructions suited to the circumstances that had arisen; and though, on his arrival, he found Raleigh, like all the other leading men of the kingdom, busied with preparations to meet the Spanish Armada, the pressing wants of the colonists were not overlooked. Two small vessels were speedily equipped, and dispatched to their aid; but they were unfortunately rifled at sea, and obliged to put back. Soon after, Raleigh made an assignment of his Patent to a company of merchants; and thus ended a great and favourite scheme, after much loss to the projector, and the destruction of the unfortunate adventurers who re-

mained in the country, in expectation of the supplies for which their Governor had proceeded to England. The project of colonizing Virginia was suffered to languish in the hands of the new patentees during the remainder of Elizabeth's reign ; and twenty years elapsed before any permanent settlement could be said to have been effected.

Raleigh's abandonment of a design, in which he had embarked with so much ardour, and in furtherance of which so many of his countrymen had been induced to quit their native land, has not passed without censure ; though, judging from their silence, his recent biographers do not seem to have been aware that any question on this head had ever been raised. Some have ascribed his conduct to a natural levity of disposition ; others to the intervention of more alluring objects. To us it appears that he gave up his Virginian project simply because he found from experience that his own means were too limited, and the times not sufficiently favourable, to allow him any longer to flatter himself with the hope of being able to prosecute it to a successful issue. The proceeding does not appear to have been blamed by his contemporaries. It was acknowledged by even the enthusiastic Hakluyt,

'that it would have required a prince's purse to 'have it thoroughly followed out.' The absence of the alluring prospect of mines, was a damping consideration with the more vulgar class of adventurers. To such, the predatory war then in activity against the shipping and commerce of Spain, held out far more tempting baits; and the direct course of navigation to North America, by which the voyage came afterwards to be so much shortened, had not yet been discovered. In a word, we are strongly inclined to think, that Raleigh's assignment of his Patent was fully justified by the necessity of the case; and that it ought not to deprive him of the glory of being viewed as a worthy leader in 'the ancient and heroical work of plantations,'\* and of having opened the path to that colonial empire which England established in the New World.

But there is another point connected with this subject, both more interesting in itself, and more important as affecting his character, yet as to which Mr. Tytler is altogether silent, while Dr. Southey expresses himself in terms which are as unjust to Raleigh as they are inconsistent with

\* Bacon.

historical truth. We here refer to the very natural question, whether he made any attempts, after the assignment of his Patent, to ascertain the fate of, or to withdraw the ill-starred adventurers, in number about a hundred, who remained in the colony in expectation of supplies from the mother country? The duty of making an effort to withdraw, or provide for them, devolved more immediately upon those to whom his obligations with his rights were transferred; and it is in the last degree discreditable to them, that, in as far as is known, they made only one attempt of the kind, which having proved ineffectual, they left the colonists to their fate. That the Government of Elizabeth made no effort to rescue these persons from the certain destruction that awaited them, is a fact that affixes a deep stigma upon her reign. But, fortunately for Raleigh, he merits none of the censure which would justly have attached to his name, notwithstanding the transfer of his colonial rights, had he done nothing towards the relief of those who quitted their country under that banner of adventure which he unfurled. His exertions, whether contrasted with the conduct of the patentees, or viewed with reference to their long continuance,

amidst all the distractions of his busy career, deserve especial notice and honour. But what does his latest biographer say on this subject? After mentioning the abortive effort of the patentees, Dr. Southey states, that '*no further attempt was made to relieve the colonists, nor to ascertain their fate; and of these persons nothing was ever afterwards known.*' He recurs to the subject to add, '*that the abandonment of these poor colonists must ever be a reproach to Raleigh.*' There are here two gross misstatements. Of the unfortunate persons, of whom he so confidently says that '*nothing was ever afterwards known,*' we learn on undoubted authority that Powhatten, a Virginian sovereign, whose name is well known in the history of that country, '*confessed to Captain Smith that he had been at the murder of the colony, and showed him certain articles which had been theirs.*'\* Will Dr. Southey, after reading this confession, say that '*nothing was ever known*' of these ill-fated colonists? But what is to be said of his far more reprehensible misstatement, that no further '*attempt was made to relieve them, nor to ascertain their fate,*' when there is historical proof that five different attempts to succour them

\* Purchas, iv. 1728.

were made by the man whose utter neglect of them he represents as a lasting reproach to his memory? The proof is contained in a remarkable notice preserved by Purchas, of the date of 1602, bearing, that 'Samuel Mace of Weymouth, a very sufficient mariner, who had been at Virginia twice before, was (in this year) employed thither by Sir Walter Raleigh to find those people which were left there in 1587, to whose succour he hath sent five several times at his own charges!'<sup>\*</sup> Had Dr. Southey consulted Purchas, he would have avoided these discreditable inaccuracies.

For some time after the abandonment of his Virginian schemes, Raleigh's chief occupations seem to have been those of a favoured courtier, an active member of Parliament, and a large sharer in those naval enterprises and privateering expeditions against Spain, which, as Hume observes, 'were scarce ever intermitted by the Queen or her subjects during one season.' As was to be expected, he experienced considerable vicissitudes in these uncertain adventures. From some curious papers of accounting preserved in the British Museum, it appears that he complained bitterly of the shares assigned

\* Purchas, iv. 1653.

to him, even in cases where the Queen herself had been a joint adventurer.\* Neither the wealth nor the morals of the country were much benefited by these expeditions. They were strongly condemned even by some men of the sword who lived near the time. ‘They indeed occasioned,’ says Sir William Monson, ‘great loss and damage to the Spaniards, but no profit or advantage to the English. There are not three men in this kingdom who can boast they have succeeded their fathers in any quantity of goods so gotten.’† The attempt to take vengeance on Philip by placing Don Antonio on the throne of Portugal, was an adventure of a nobler and more romantic description; and Raleigh, with some other distinguished men, was honoured by the Queen with a gold chain in token of her approval of his services in this memorable but unsuccessful expedition.

One of the most pleasing incidents of this period of his life was his meeting with Spenser, during a sort of compulsory visit to Ireland, occasioned by some temporary eclipse of his favour at court. They

\* *Burghley Papers*, Bibl. Lansdown., vol. lxx. No. 94. Ibid. vol. lxxiii. Nos. 10 and 11.

† *Naval Tracts*, in Churchill’s Coll., iii. 211-12.

are supposed to have become previously acquainted during the rebellion of the Desmonds; but their subsequent intercourse led to a friendship which proved as beneficial to the poet, as the exercise of his patronage was honourable to Raleigh. This meeting is beautifully described by Spenser himself in the pastoral of 'Colin Clout,' which he represents in his dedication to Raleigh—who is figured as 'the Shepherd of the Ocean'—as 'agreeing with 'the truth in circumstance and fact.' Spenser was then residing at Kilcolman, an ancient castle of the Desmonds, situated on the banks of the Mulla; and the scene which he delineates in the opening of the poem is in the highest degree interesting and pleasing: but it is still more agreeable to find him recording the fact of his introduction and recommendation to the Queen by Raleigh, after his restoration to favour.

'The Shepherd of the Ocean——  
Unto that Goddess' grace me first enchanted,  
And to mine oaten pipe inclined her ear,  
That she therein thenceforth 'gan take delight,  
And it desired at timely hours to hear.'

The mind dwells with satisfaction on such bright spots in Raleigh's ambitious and troubled career, where his native generosity, unobstructed by any

adverse feeling, exerts itself in acts entitling him to our approbation and esteem. He had another opportunity of showing the friendliness of his disposition, and his congenial admiration of superior merit, as well in arms as in letters, by the account which he published in 1591, of the sea-fight at the Azores, maintained for fifteen hours in a single ship, commanded by Admiral Sir Richard Grenville, against a Spanish fleet of fifty-three sail, manned with ten thousand men! His description of the action, in which the enemy's numerous fleet formed a circle around the ship of the heroic Admiral, who, pierced with mortal wounds, continued to fight her till her ammunition was exhausted, when he commanded the master-gunner, a kindred spirit, to sink her, 'that nothing might remain of glory or victory 'to the Spaniard'—and which command would have been obeyed but for the interference of the remainder of the mutilated crew—presents a view of perhaps the most astonishing naval conflict ever delineated. It is written with great clearness and vigour, and breathes a fervid spirit of loyalty and patriotism in its indignant reprobation of the conduct of Spain 'for her bloody and injurious designs, purposed and 'practised against Christian princes, over all of

' whom she seeks unlawful and ungodly rule and  
' empery.'

The man who could sound such thrilling and patriotic notes, was sure to advance himself more and more in the good graces of Elizabeth: but the course of royal favour was turned aside by an act which, for some time, put an end to all personal intercourse with his hitherto partial sovereign; and led him to enter upon a new and romantic scene of adventure, from which his subsequent history derives much of its peculiar interest and colouring. This reverse was occasioned by an amour and private marriage with one of the maids of honour—Elizabeth, daughter of Sir Nicolas Throgmorton. All who are acquainted with the history of this reign know, that the intercourse between the Queen and her favourites generally wore the appearance of a commerce of love; and that she was addressed by them, down to the last day of her life, in terms of gallantry and ardent personal devotion. Thus her foibles, or 'softnesses,' as Bacon chooses to designate them, concurring with her arbitrary maxims of government, led her to view Raleigh's conduct as both personally and politically offensive—personally, as interfering with that exclusive devotion

to herself which she exacted from her favourite knights; politically, as interfering with her prerogative, which required that her consent to the marriage should have been asked and obtained. The offending couple were accordingly committed to the Tower, and Raleigh was deprived of the offices which gave him the privilege of free access to his sovereign. No man knew better the weaknesses of his royal mistress, and no one could be less scrupulous in the use of any expedients, however ignoble, by which her wrath might be appeased. Without adverting to his theatrical struggles to obtain a view of his peerless princess, we may notice, as curiously descriptive of the parties, a letter addressed to Cecil, but evidently designed for the eye of the Queen, in which he represents himself as cast into the depth of misery 'from being deprived 'of the delight of seeing her'—'her that he had 'been wont to behold riding like Alexander, hunt- 'ing like Diana, walking like Venus—the gentle 'wind blowing her fair hair about her pure cheeks 'like a nymph; sometimes sitting in the shade like 'a goddess—sometimes singing like an angel, some- 'times playing like Orpheus!' Notwithstanding every allowance that can be made for the occasional

follies of the wise, and the influence of times and circumstances, it would be difficult to regard this tawdry and fulsome rhapsody without feelings approaching to contempt. Yet let us in extenuation recollect, that Henry the Fourth, in order to conciliate Elizabeth, condescended to demean himself in a similar strain, when, on being shown a miniature of her Majesty by her Ambassador, he protested, in presence of the fair Gabrielle, that to possess the good graces of the original, ‘he would forsake all ‘the world, and hold himself most happy!’\*

After an imprisonment of some weeks, the Queen relented so far that she gave him liberty, without, however, allowing him to approach the Court, and bless himself with the view of ‘the gentle wind ‘blowing her fair hair about her pure cheeks.’ But his exertions in Parliament on behalf of the Crown, upon occasions when subsidies were in question, could not but prove acceptable to Elizabeth; and it would appear, that in no long time he had so far re-established himself in her favour, as to contrive, through her interference, to obtain a grant of the manor of Sherborne, in Dorsetshire; a possession which belonged to the Church, and the alien-

\* Murdin’s *State Papers*, p. 718.

ation of which seems to have been attended with great obloquy. It would appear, too, that there were strong apprehensions among his enemies of a complete restoration to favour; for, in a letter of the period, expressed with extreme rancour and bitterness, the writer says,—‘It is now feared of all ‘honest men, that Sir Walter Raleigh shall pre-‘sently come to the court; and yet it is well with-‘stood. God grant him some farther resistance, ‘and that place he better deserveth, if he had his ‘right.’\* Such, we fear, are the feelings which, in all ages, fill the bosoms of rival courtiers and statesmen! The wishes of his enemies, in as far as regarded his banishment from court, were gratified for a season; during which he seems to have employed himself in making improvements at Sherborne, which, according to the traditions of the times, ‘he beautified with gardens, and orchards, and groves of ‘much variety and delight.’ But his mind was not of a cast to remain satisfied with such occupations. They ministered in no degree to his stirring and grasping ambition; and being now expelled from every royal avenue to distinction, and impatient alike of obscurity and inaction, he resolved to cut out for

\* Birch’s *Mem. of Eliz.* i. 151.

himself a new path of adventure, which, as he fondly imagined, would conduct him both to glory and to wealth. It was during this interval of obscuraction, in a word, that he devised that famous voyage in quest of El Dorado, from which undoubtedly he reaped a certain fame, but which has done more to throw doubt on his judgment and veracity, than all the other questionable acts of his varied life put together. As the inquiries connected with this voyage are extremely curious, and have been almost wholly overlooked, or at any rate inadequately treated, by his biographers, we propose to notice them at some length.

Raleigh was more deeply read, perhaps, than any of his countrymen in the histories of the Spanish discoveries and conquests in the new world. They presented scenes, occurrences, and objects of the greatest interest to a congenial spirit like his. It was in this course of reading that he found accounts of the existence of an undiscovered sovereignty, teeming with the precious metals, which had long been sought for in vain by the most enterprising and resolute of the Spanish adventurers. Their expeditions in quest of it had, latterly, been directed to the interior of the vast region lying between the

Orinocco and the Amazons, or Guiana. The rocks were represented as impregnated with gold, the veins of which lay so near the surface as to make it shine with a dazzling resplendency. The capital, Manoa, was said to consist of houses covered with plates of gold, and to be built upon a vast lake, named Parima, the sands of which were auriferous. This sovereignty, called El Dorado, became the seat of an aggregation of fables, which all concurred to magnify its importance, and to throw a sort of enchantment around it. Its magnificence was partly ascribed to the flight, at the time of the Spanish Conquest, of a younger brother of the last Inca of Peru, who, accompanied by multitudes from that and the adjacent countries, and laden with treasures, was believed to have there established himself. The retreat of Manco-Inca, brother of Atahualpa, to the regions east of the Cordilleras, probably gave rise to this tradition.\* Fiction placed another imaginary kingdom to the south of New Mexico, called the Great Quivira, supposed in like manner to have been founded by those who escaped from the ruins of the empire of Montezuma.† Such fables found

\* Gumilla, ii. 146-7, French Transl. Humboldt's *Per. Nar.* v. 854-5, English Transl.

† Feyjoo, *Theatro Critico*, iv. 262.

a ready assent among minds fashioned to credulity by the wonders of the new world, and the obscurity in which much of it long remained involved. They who could believe in the existence of a fountain whose waters had the virtue of restoring to youth and beauty the old and decrepid who bathed in them, could have no difficulty in believing in the golden wonders of El Dorado; a region only differing from others as being infinitely more prolific of that metal than any hitherto discovered. Poets\* have celebrated, and historians† detailed the numerous expeditions in quest of it; and its locality has engaged the attention and enquiries of some of the most eminent geographers and travellers of modern times.‡

It is impossible not to entertain some curiosity as to the origin of a fable which led to such results. With respect to this, it may first of all be mentioned, that the term El Dorado was not originally used to designate any particular place; it signified generally the ‘gilded’ or ‘golden,’ and was variously

\* Castellanos, *Primera Parte de las Elegias de Varones ilustres de Indias.*

† Herrera—Piedrahita—Pedro Simon.

‡ Gumilla—Caulin—Condamine—Humboldt.

applied. According to some, it was first used to denote a religious observance among the natives. The chief priest, after performing his oblations at the altar, and anointing his body, covered it with gold dust so as to make it shine; and was hence called the gilded man. Others say that it was applied to a sovereign prince, who every morning had his body ornamented in the same way, and was on that account called the gilded king.\* The fable appears clearly to have referred to some particular place, the situation of which was transferred from one quarter to another, according to the state of opinion or belief. The whole of Guiana was, in consequence of the above usages, sometimes designated by the term El Dorado; but the locality of the fable which came to appropriate that name, was successively assigned to different quarters of that vast region, and the expeditions in search of it varied accordingly. As the picture which that fable presents to us is that of a district whose gold-covered capital was built upon an extensive lake, and whose rocks indicated a marvellous abundance of the precious metals—the question to be solved is, whence arose the belief that such

\* Piedrahita—Simon—Oviedo, in Ramusio.

a district existed in the interior of Guiana? Condamine, in descending the Amazon on returning from his scientific mission to Peru, instituted some inquiries which led him to believe that he had possessed himself of materials for solving this problem; but that solution appears to have been reserved to the later researches of Humboldt. This eminent traveller, whilst engaged in exploring the countries upon the Upper Orinocco, was naturally led to direct his attention to the origin of a fable of such celebrity, of which he still met with the remains of the ancient belief. ‘When near the ‘sources of the Orinocco,’ says he, ‘we heard of ‘nothing but the proximity of El Dorado, the lake ‘Parima, and the ruins of its capital.’\* The information which he collected respecting that portion of eastern Guiana which lies between the sources of the Rio Essequibo and the Rio Branco, seems to furnish the groundwork of the fiction. This tract or isthmus is, according to him, ‘the classical ‘soil of the Dorado of Parima.’ Here was the locality pointed at in the vague aspirations of many sanguine adventurers. And here, in a river called Parima, and in a small lake connected with it,

\* *Per. Nar.* v. 506.

named Amucu, which is occasionally swollen by inundations, we have basis enough on which to account for the belief in the great lake bearing the name of the former; and in the islets and rocks of mica slate and talc, which rise up within and around the latter, reflecting from their shining surfaces the rays of an ardent sun, we have materials out of which to form that gorgeous capital, whose temples and houses were overlaid with plates of beaten gold. With such elements to work upon, heated fancies, aided by the imperfect vision of distant and dubious objects, might easily create that fabulous superstructure. We may judge of the brilliancy of these deceptive appearances, from learning that the natives ascribed the lustre of the Magellanic clouds, or nebulae of the southern hemisphere, to the bright reflections produced by them!\* There could not well be a more poetical exaggeration of the lustrous effects produced by the metallic hues of rocks of talc.

These details, in which De Pons,† a somewhat later traveller, who long resided in an official capacity in the neighbouring countries, fully concurs,

\* Humboldt, *Per. Nar.* v. 773-860.

† *Voyage à la Terre-Ferme, dans l'Amer. Merid.*

in all probability point to the true origin of this remarkable fable. It is in such suppositions alone that any explanation can be found of some historical recitals seemingly unquestionable. Such are those regarding the noted expedition of the German adventurer, Philip Von Huten, undertaken in 1541, and fully detailed by Piedrahita, one of the Spanish historians of America. From his narrative it appears, that Von Huten and his companions averred that they were prevented by a body of ferocious Indians, with whom they had a long and bloody conflict, from reaching a place containing structures whose roofs appeared to them to shine with all the brilliancy of gold. Unless we suppose this story to be a fabrication, which does not appear warrantable, occurring as it does in the work of a respectable historian, there is no way of accounting for it but by referring to illusions of the kind above described. The perusal of the account of Von Huten's expedition, in Piedrahita, made Gumilla a firm believer in El Dorado.

No geographical fiction ever occasioned so vast a waste of human life. Yet, so differently has it been viewed by different minds, that whilst one set

of Spanish religionists reprobate it as the device of the Evil Spirit to lure mankind to their destruction, another hail it as a benevolent expedient of the Deity to diffuse the light of the Gospel amongst the heathens of America. A history of the expeditions in search of El Dorado would form a singularly curious and interesting volume. But we cannot afford room for the briefest mention of them. There is nothing in romance to surpass the dangers, privations, and sufferings to which they gave rise. Yet neither the disasters, nor even the almost total destruction of many, prevented others from being undertaken. It mattered not that all returned discomfited and disappointed. Adventurers followed in quick succession; the last always deluding themselves with the hope that the discovery of El Dorado would ultimately be achieved. Thus did this *ignis fatuus* continue for ages to allure its credulous followers to perish in their phantom pursuit. Raleigh has, in a striking passage of his 'History of the World,' characterized these expeditions in terms which show his great admiration of the energies displayed in them. His belief in the reality of the seductive magnet by which they were attracted, was the principal, but not the only

motive of his voyage to Guiana. The multiplied failures of the Spaniards produced in him a strong conviction, not that they had wasted their means and efforts in pursuit of a phantom, but that they had missed the right way. This was precisely the conclusion that such a mind as his was likely to form. Some time before he seriously thought of the undertaking, he appears to have received accounts of Guiana of a very flattering description; but his prospects at home were then too bright to tempt him to embark in a project which would necessarily remove him to a great distance, and expose his interests at court to the intrigues likely to be occasioned by long absence. But the cessation of those interests, and his restless ambition, revived the project, and inspired him with the most gigantic designs. Still clinging to schemes of colonization, and burning with the desire to humble the Spaniards, he flattered himself that he should be able, by the acquisition of Guiana, to extend the sphere of English industry and commerce; to render London the mart of the choicest productions of the new world; and to annex to the Crown a region which, besides its great colonial recommendations, would enable it to command the chief possessions of

its greatest enemy, and from which his principal resources were derived. These were patriotic, though, it may be, not very wise or practicable designs. And in classing Raleigh with the knights-errant of El Dorado, we must, in justice to his memory, assert his aims to have been of a far higher order than the great majority of those who engaged in the same pursuit; none of whom had any other object than to gratify that thirst of gold which all the mines of Spanish America had not been able to slake.

A year before he set out upon his voyage, and while his preparations were in progress, Raleigh had taken the precaution to dispatch a vessel to Trinidad, under the direction of a skilful sailor, Captain Whiddon, to make inquiries as to the entrances to the Orinocco; but, as afterwards appeared, without obtaining any useful information. His preparations were conducted upon an extensive scale, and attracted considerable notice. Unfavourable rumours seem to have been rife on the occasion. Some said that he had nothing in view but a privateering expedition; others that he would himself remain concealed in some corner of Cornwall till his ships returned; and a third class

of detractors scrupled not to affirm that his intention was to seek employment in Spain, and for ever to abandon England. These reports, it must be allowed, show either that he had many enemies, or that his character did not stand high with his countrymen. That his haughty and arrogant demeanour had produced much unkindly feeling towards him is certain; and it must also be admitted that his career had not been such as to manifest a steady adherence to any high principles of morality. But that the rumours alluded to did him wrong, seems unquestionable; for there can be no doubt, if human purposes can at all be scanned, that his whole soul was filled with the confident expectation of making an acquisition, which if profitable to himself, would also prove beneficial to his country.

On the 9th of February 1595, he set sail from Plymouth with five vessels, having on board, besides mariners, about a hundred soldiers, with their officers, and a few gentlemen volunteers; and, strangely as it may now sound, to the expense of this expedition for the discovery of El Dorado, the Lord High Admiral, and Sir Robert Cecil, who was soon after made Secretary of State, were contributors! The occurrences at Trinidad, where,

towards the end of March, the expedition arrived, present some incidents of a highly romantic and dramatic cast; for there, in the person of the governor, Don Antonio de Berrio, Raleigh made prisoner of one who had already attempted the discovery of El Dorado, and was now preparing a fresh expedition for another trial. Berrio had broken faith with Captain Whiddon when the latter was at Trinidad in the preceding year, by seizing some of his men, after pledging his word for their safety; and Raleigh, as well to be revenged for this offence, as to prevent a surprise which he was informed was meditated against himself, contrived, by a prompt movement, to take possession of the small town of St. Joseph, and of the person of the governor. Thus were brought face to face, from two hostile countries, two distinguished competitors for a golden kingdom, of which neither had obtained the most distant glimpse—which was to both a mere creature of fancy—and which neither could hope to reach without encountering the most frightful perils that try the strength or menace the life of man. History has few scenes more singular—scenes where the actors were real and in earnest, but where the objects of action were altogether imaginary.

Raleigh tells us, that finding his prisoner to be 'a gentleman of great assuredness and of a great heart,' he treated him 'according to his rank and deserts.' Their intercourse furnished fresh aliment to the flame which already glowed with sufficient intensity in Raleigh's imagination; for Berrio, little suspecting that his captor was a rival in the same pursuit with himself, freely communicated all the knowledge he had acquired during his previous expedition, and his plans for the further prosecution of his design. Among other communications, he showed Raleigh the copy of a declaration said to have been made by a person of the name of Martinez, who represented himself as having served under Diego de Ordaz in his first attempt to ascend the Orinocco, and who stated that, having been made prisoner by the Guianians, he was by them carried to Manoa, the golden capital of El Dorado, where he remained several years, and was then carried blindfolded to the borders, that he might not be able to disclose the approaches to that envied principality. Arriving, after many perils, at St. Juan de Puerto Rico, he there made a declaration to this effect, which was deposited in the Chancery of that place, and copied by Berrio. This was

not the only fabrication of the sort of which the Spanish authors make mention. Gumilla, at a long subsequent period, gravely recounts his having himself met with an Indian who stated that he had resided fifteen years in this fabulous capital, and whose account of it was so distinct and minute as to render it impossible, according to the learned Jesuit, to question its existence! Having procured from Berrio all the information he could furnish, Raleigh at length threw off the mask he had hitherto worn, and told his captive, who all the while supposed his destination to be Virginia, that he also was in quest of El Dorado, and thus far advanced towards its discovery. Their colloquies then assumed another aspect: ‘Berrio,’ says Raleigh, ‘was stricken with a great melancholy ‘and sadness, and used all the arguments he could ‘to dissuade me; and also assured the gentlemen ‘of my company that it would be labour lost, and ‘that they would suffer many miseries if they pro-‘ceeded.’ This was truly spoken, as events proved, but without the least good faith; for Berrio’s mind was full of his second attempt, to forward which one of his principal officers, named Domingo de Vera, had been dispatched to levy men, and make

other preparations in Spain. The remarkable appearance of that officer, whose person, deportment, and proceedings are fully described by the Spanish historians, joined with his highly-coloured representations of the vast wealth that was sure to be realized by the expedition, produced amongst his countrymen effects similar to those which were engendered in France by the Mississippi scheme. The desire to be included in the adventure excited the most eager competition, and led multitudes to dispose of their property, never doubting to be repaid tenfold from the treasures of El Dorado. Berrio's second attempt was, we believe, the last undertaken by the Spaniards upon any extensive scale. Dr. Southey, deviating judiciously from the beaten path of Raleigh's biographers, has given an account of the singular artifices of Domingo de Vera, abridged from the narrative of Father Simon. Mr. Tytler appears to have been ignorant of the existence of this narrative; at any rate he has not made the slightest allusion to it.

We must not take leave of this subject without adverting to an extraordinary statement by Dr. Southey, which, if well founded, would greatly diminish the interest of the scenes at Trinidad. It

amounts to this, that Berrio himself never fell into Raleigh's hands, and consequently that he was no party to the conversations which his captor recites! 'It is very remarkable,' says Dr. Southey, 'that neither Pedro Simon, nor Oviedo y Baños make the slightest mention of Raleigh's expedition. His entering the Orinocco might easily be unknown to them; but the capture of Berrio should seem a matter of too much importance either to remain unknown or unmentioned. From a careful perusal of Pedro Simon, I am led to infer that the Governor Don Antonio Berrio was not, and could not have been in the island of Trinidad when Raleigh set forth to the newly-founded city of St. Joseph; that the island was at that time in possession of a party opposed to Berrio; and that Raleigh, having captured the person who was in command there, supposed that he had got the lawful governor in his hands;—a mistake which the prisoner might be willing enough to encourage.' This seems to us a most fallacious and unwarranted inference. Supposing these historians had given an account of the expedition, but without mentioning the capture of Berrio, surely their silence respecting it would not be

held sufficient to gainsay the positive testimony of Raleigh, vouched by his officers, whom he mentions as having conversed with Berrio; for, as neither they nor any of the gentlemen volunteers in the expedition ever breathed a doubt as to a fact proclaimed to all the world by Raleigh's account of it, we are entitled to hold it as vouched by them. It seems incredible that they should all have been deceived, or that the mistake as to Berrio's identity, if any such there was, should not in some way have obtained publicity. But when we find that the historians referred to omitted all mention of the expedition itself, though it speedily became famous throughout Europe, is it not absurd to consider their silence as to one of its incidents as any proof that the incident was supposititious? To believe that Berrio was not Raleigh's prisoner, we must suppose, what seems utterly improbable, that his personator was able to hoodwink one of the keenest-sighted men in the world, throughout a prolonged series of conversations, upon topics in which Berrio was personally and deeply interested; for Dr. Southey does not pretend that anything which passed in these conversations was not perfectly consonant to the actions and character of

'the lawful governor.' Humboldt more than once alludes to the capture of Berrio, without intimating the slightest doubt of the fact; and it hardly will be said that his knowledge of the Spanish historians of America is surpassed by that of Dr. Southey. But independently of all this, Raleigh's own narrative furnishes decisive proof that he could not have been deceived; for amongst his officers there was Captain Whiddon, who had seen and conversed with Berrio in the preceding year—a fact which Dr. Southey must have overlooked or forgotten—and consequently, were his inference well founded, Berrio must have been personated by the same individual in that year also, and this without a hint of the fact transpiring in all that time!—a supposition which is palpably ridiculous. It may seem unnecessary to make any further observations upon this point; but as it is connected with one of the most singular passages of Raleigh's life, we cannot refrain from adding, that if the capture of Berrio 'was a matter of too much importance 'to remain unknown or unmentioned' by the Spanish historians, the mention of that circumstance in a work translated and circulated all over Europe—as was the case with Raleigh's narrative of his

voyage—could not, for that very reason, have remained uncontradicted, supposing it to have been untrue; yet we will venture to assert that no contradiction of it anywhere exists. Would not the Spanish historians have gloried, had they been able to give the lie to this hated enemy of their nation, for having presumed falsely to assert that a grandee of Spain, and governor of one of its dependencies, had been his prisoner?

Of this celebrated voyage we cannot afford room even for an outline. The attempt to enter the Orinocco, which empties itself into the ocean, at a great distance from its main stream, by several rivers, the navigation of which was then wholly unknown, was one of extraordinary boldness and peril; especially when it is considered that Raleigh's ships drew too much water to admit of his using them, and that it was necessary to leave them at anchor, and to have recourse to boats. But as it was only by ascending this river that he could hope to reach the grand object of his wishes, he had no alternative but that of abandoning the design, or of committing himself and his adventurous companions to those fragile and hazardous conveyances. About a hundred

persons were embarked in the boats by which the main body of the river was to be ascended; and in these they continued to navigate for a month, sometimes under a burning sun, sometimes under torrents of rain, with no other resting-places but the hard boards, and no accommodations but what were common to all. Raleigh's account of their progress through the labyrinth formed by the numerous outlets of the great stream—of their alternate hopes and fears, wants and fortuitous supplies —of the aspects of the country and its productions —and of their entrance at last into the grand channel of the majestic Orinocco, is full of interest and variety; occasionally containing descriptive passages of much beauty, joined with traits of almost inconceivable credulity, and frequent asseverations of his belief in the commercial resources and metallic riches of the vast region through which its sealike waters roll. After ascending the river about sixty leagues, according to Humboldt's estimate, its rapid and terrific rise rendered it necessary to re-descend. Being thus obliged to turn his back upon El Dorado, and to leave a region for the first time beheld by any of his countrymen, but with a firm determination soon to return, he formally bound

those Caciques, with whom he had opened a friendly intercourse, to remain faithful to his sovereign, in whose name and behalf he took possession of the country. The continued rising of the waters, and their ignorance of the navigation, made the regaining of the ships left at anchor an undertaking of no small danger and anxiety; but at last they reached them in safety, ‘than which,’ says he, ‘there could be no more joyful occasion.’

Raleigh returned to England about the close of the summer of 1595, and did not remain long at home without showing his strong faith and unaltered designs with respect to Guiana; for, before the end of that year, and early in the next, he despatched two vessels for the purpose of procuring further information, and confirming the amicable relations established with the native Caciques. The first was commanded by one of his most noted followers, Captain Keymis, who shared the more enlightened as well as the more chimerical views of his leader; and who, on his return, published an account of his voyage, in which, as Humboldt informs us, he indicates that very locality above mentioned, which his own inquiries had pointed out as the seat of El Dorado. His reproofs of the incredulity

and indifference that prevailed respecting the great advantages to be derived from the colonization of Guiana, are lofty and indignant; and sometimes expressed in a way to show that striking conceptions and imaginative language were common to writers of all classes in that age. Previous to the publication of Keymis's narrative, Raleigh's account of his own voyage had appeared, under a title sufficient of itself to awaken scepticism among his countrymen. It was entitled 'The Discovery of 'the large, rich, and beautiful empire of Guiana' —an empire of which few or none of those to whom it was addressed had ever heard. It was written in that clear and mellow style, of which its author was so great a master, but without any approach to method or coherency. He says himself indeed, 'that 'he had studied neither phrase, form, nor fashion in 'its composition.' But its moral, as distinguished from its literary character, presents a more contentious subject of inquiry. By some, its fabulous statements have been branded as the coinage of deliberate falsehood; while others have only doubted his good faith, in reciting them as conformable to his own belief. For our part, though we cannot pretend to determine the extent of Raleigh's pro-

bity, or to ascertain by any exact scale the measure of his belief, we never have been able to see why things incredible to us, should have appeared in that light to those living at a period uninstructed by our science, undisciplined by our researches, unguided by our experience. The human mind is so constituted as to be revolted at one time by that which, at another, meets with its ready assent and belief. All sound reasoning, in a word, seems to authorize the conclusion, that Raleigh might have honestly believed all the marvels he relates; and though his recitals may have been, and doubtless were, sometimes exaggerated, or coloured by hues reflected from his own imagination, we are inclined to think that his belief was, in the main, sincere. When Hume says that his narrative 'is full of the grossest and most palpable 'lies that were ever attempted to be imposed on the 'credulity of mankind,' he not only speaks in ignorance of the facts of the case, but forgets that the man whom he thus coarsely censures, did not, like him, view the fables connected with Guiana from the vantage-ground of an enlightened and scientific age.

The statements respecting this region to which Hume may be supposed more particularly to refer,

are those concerning its female warriors—its tribe ‘with eyes in their shoulders, and mouths in their breasts’—its El Dorado—and its auriferous rocks.

With regard to the American amazons, there were believers in their existence as late as the middle of last century; and among them was no less a philosopher than Condamine. As to the headless tribe, that fable has had sundry prototypes both in the ancient and modern world; and the existence of such a race was the common belief of the natives at the period of Raleigh’s voyage, as it may be at this day. We are told by Humboldt, that he ‘met an old Indian who asserted that he ‘had seen them with his own eyes.’ The son of the Guianian chief, whom Raleigh brought to England for education, again and again asserted the existence of this tribe—averring that they had of ‘late years slain many hundreds of his father’s people.’ Raleigh, though aware that the avowal would expose him to obloquy, boldly states his belief that such a tribe was to be found in Guiana; grounding it on the concurring testimony of the natives; and asking, reasonably enough, what profit could accrue to him from the invention and dissemination of such a fiction? As to El Dorado,

we do not think that Hume could have been acquainted with the Spanish historians of America; otherwise he must have known that Raleigh only expressed a conviction entertained by thousands. Had he been conversant with these writers, it is scarcely possible that he could have taxed Raleigh with gross falsehood for only repeating what so many others stated, and for adopting a belief which was the common belief of the greatest monarchy of Europe. Nor must it be forgotten that Raleigh was by no means the only English believer in El Dorado. Sir Robert Dudley, who, in 1595, made a voyage to Trinidad, and there heard of that golden region, appears to have as firmly believed in its existence, and to have been as desirous to discover it, as Raleigh himself. Fourteen years after, Sir Robert Harcourt, in his account of his voyage to Guiana, takes occasion to mention, that he had directed some of his followers to endeavour 'to go up into the high country, and to find out the city of Manoa, mentioned by Sir Walter Raleigh in his Discourse;' thus manifesting his belief, by directing a search for its gorgeous capital.\* Of things palpably fa-

\* Harcourt, in Purchas, iv. 1270-80.

bulous in our eyes, it is not, we must repeat, enough to say, that they could not be believed by such a man as Raleigh. To what absurd conclusions would not this principle lead? As well might it be contended, that no instructed man ever believed in witchcraft, in judicial astrology, or the philosophers' stone! If the great discoverer of America could be seduced by the belief that he had there found the site of the terrestrial paradise; and if Raleigh himself could seriously discuss the question, as he does in his '*History of the World*', whether that site ought not rather to be sought near the orb of the moon, he might well be allowed to believe in El Dorado, without prejudice either to his sincerity or his sanity. Was it half as extraordinary that Raleigh should believe in the fables in question, as it was that Dr. Johnson should believe in the second sight? It has been justly observed by this vigorous thinker, 'that it is the great failing of a strong imagination to 'catch greedily at wonders'; and it ought to be recollected, that though at the time when Raleigh lived, the human mind had been stimulated by various concurring causes to extraordinary displays of strength and energy, it was still in a state

strongly disposing it to credulity. Above all, the discoveries in the new world had revealed so much that was unlike anything known in the old, as to engender a disposition, especially amongst 'men of strong imaginations,' to believe in any wonders that might be related concerning it.

As regards the mines of Guiana, it must be acknowledged that Raleigh was charged with bad faith in this particular, even before the publication of his voyage. This imputation must have had reference to verbal statements made by himself immediately upon his return; and it appears that he endeavoured to meet it by having trials made at the Royal Mint of some ores which he had imported, and which were found to yield a certain proportion of gold. Later accounts having shown that his general and confident averments regarding the riches of that country are far from being true; it has in consequence been supposed that the imputation of bad faith, with which he was early assailed, was well founded. But though by no means disposed either unduly to eulogize or defend him, our investigations have led us to the conclusion that this accusation is unfair and unwarranted. The answer which he himself made to it is well

worthy of notice. ‘Weak policy it would be in  
‘me either to betray myself or my country with  
‘imaginings; neither am I so far in love with  
‘that watching, care, peril, disease, bad fare, and  
‘other mischiefs that accompany such voyages, as  
‘to woo myself again into any of them, were I not  
‘assured that the sun covereth not so much riches in  
‘any other part of the earth.’ That this really was  
his belief, there can, we think, be as little doubt  
as of his having, like many others, been misled by  
those fallacious appearances which, from the very  
earliest accounts of this region, gave it, as Humboldt  
tells us, an extraordinary reputation for metallic  
wealth. It has been often said, that these confident  
assurances were merely lures to induce his country-  
men to embark in his colonial schemes; and that  
this was the case to a certain extent, we have no  
doubt: but that he was himself a believer in the  
substantial reality of his own representations, is the  
only rational conclusion that a fair examination of  
his conduct can warrant, whether considered with  
reference to this or to subsequent periods of his  
life. Viewing the whole of his statements and pro-  
ceedings respecting Guiana, from first to last, it  
seems impossible to reconcile them to any principles

applicable to the explanation of human conduct, upon any other supposition. Those who have judged otherwise appear to have forgotten, or not to have known, that the appearances which so fatally deceived him, and drew from his warm fancy such glowing representations, were, to an equal extent, relied upon by others whose good faith never has been doubted. Thus we find Francis Sparrey, who resided for some time in Guiana, representing a particular part of the country as abounding in ‘mines of white stone, in which are *much natural and fine gold, which runneth between the stones like veins.*’\* These were the very minerals which led Raleigh to describe the rocks of Guiana as teeming with gold; and Sir Robert Harcourt was in no degree behind him in the same faith. ‘The high country,’ says the latter, ‘is full of white sparre; and if the white sparres of this kind be in a main rock, *they are certainly mines of gold or silver, or both.* I made trial of a piece of sparre, and I found that it held both gold and silver, which gave me satisfaction that there be rich mines in the country.’† But this is not all. So

\* Sparrey, in Purchas, iv. 1249.

† Harcourt, in Purchas, iv. 1277.

far were Raleigh and his contemporaries from being the only dupes of these appearances, that even so late as the middle of the last century, works were erected at great expense by some Spanish projectors, for the purpose of subjecting these supposed auriferous rocks to the chemical processes necessary to smelting; and it was only after a series of expensive attempts, that their hopes and labours were found to be fallacious and unavailing.\* Great injustice has, therefore, been done to Raleigh, in supposing that he was either the gratuitous inventor of these golden legends, or the only victim of their allurements.

We have dwelt largely upon this subject, because it is not only intrinsically curious, but of considerable interest, as deeply affecting the character of an extraordinary man, who stands in need of all the justice that can be honestly done to him, where his probity cannot be fairly questioned. Paradoxical as the observation may appear, the only good grounds for impeaching his veracity in regard to Guiana, are to be found in the artifices prompted by his belief in its unparalleled recommendations as a national acquisition; for it was that very

\* Humboldt, *Per. Narr.* v. 772, 859.

belief that induced him to call in the aid of fiction to further his object. Hence it was, that in the highly coloured statement of these recommendations which closes his narrative, he has the effrontery to recount a supposed prophecy foretelling its acquisition by England. Hence, too, his gross flattery addressed to the well-known weakness of the Queen, in his extravagant recital of the rapturous admiration of the Indian Caciques on the exhibition of her portrait. A picture of a red monkey, or of a horned owl, would have proved an object of greater interest to the worthy Caciques than that of her virgin Majesty in her ruff and farthingale.

We must not allow these controversial discussions to supersede all farther mention of some other projects which Raleigh appears to have entertained, and of which we have only spoken generally. One of these was to carry a force to Guiana, sufficient to induce the Inca or sovereign of El Dorado to become a tributary and ally of England! Another was, to establish colonies and commercial companies in the most inviting quarters of Guiana, by which means he confidently hoped ‘to see in London a ‘contraction-house of more receipt for that country

'than there was in Seville for the West Indies.' It was to promote this scheme that he cultivated so assiduously the friendship of the natives, and that he took with him to England the son of one of the principal chiefs, to be there educated. Dr. Southey has spoken somewhat sceptically as to the extent of the intercourse which he represents himself as having held with the natives; but, as he was constantly attended by an Indian interpreter, whose qualifications appear to have been well known to the other English explorers of Guiana,\* we cannot see any reasonable grounds for doubt upon the subject; and it is allowed by Humboldt, a most competent judge, that Raleigh in this very way collected information that lent 'important helps to 'the history of geography.' Nothing, indeed, has struck us as more strongly indicating his extensive views, and his address in pursuing them, than the vast respect with which he contrived to impress the Guianian chiefs, and which was manifested in the length of time they remembered him, and their eager wishes for his return. Thus in the account of Leigh's voyage, written in 1606, we are told that 'one of the chiefs came far out of the main to in-

\* Purchas, iv. 1255.

'quire about Sir Walter Raleigh;\*' and in that of Harcourt, written in 1608, it is mentioned that another chief came above a hundred miles to make similar inquiries.† His sagacity with respect to the measures necessary to ensure the stability of his undertakings, was further shown by a proposal to erect two forts upon the Orinoco, thereby to command its navigation; a proposal which, in the opinion of Humboldt, indicated great judgment and military skill. By such expedients, and by thus securing the means not merely of defence, but of invading the possessions of Spain where they were most vulnerable, he hoped to put an effectual curb upon her power, and to constrain her to attend to her own domestic concerns, instead of intriguing to disturb the peace of the Protestant world. Had Raleigh's views been limited to such objects, he would have been extolled as a statesman and a patriot; but the fable of El Dorado, and the dream of an alliance with its imaginary potentate, threw an air of doubt and ridicule over his better designs, and diminished the respect that would otherwise have been due to the far-seeing policy which they indicated.

\* Purchas, iv. 1264.

† Ibid. iv. 1271.

The great and surprising effects of that fable, joined with its long-continued dominion over the minds of the credulous, form one of the most curious and remarkable portions of the history of the New World. It was not till the first half of the seventeenth century was well advanced, that geographers began to doubt the existence of El Dorado. ‘*Hodie dubium sit*,’ says De Laet, whose work was published in 1633, ‘*an Dorado extet in rerum natura, nec non.*’ Acuna writing in 1640, expresses a hope that God may one day enable mankind to arrive at the truth concerning it. Nearly a century afterwards, Gumilla unhesitatingly declared his adoption of the ancient belief. When Condamine arrived at Para, he met a Dutch surgeon named Hortsman, who in 1740 had made a journey in search of El Dorado; in which, notwithstanding incredible fatigues and privations, he proceeded as far as the Rio Negro, where his bootless expedition terminated. His account of the journey, which he showed to Condamine, was long afterwards seen by Humboldt when in that quarter. It may indeed be safely stated, that El Dorado was treated respectfully, and its existence viewed as at least doubtful, in most of the general repositories

of information, up to the middle of the eighteenth century. Adam Smith, in alluding to Raleigh's belief as a proof that the greatest minds sometimes give way to strange delusions, expresses his astonishment that so learned a man as Gumilla should entertain such a fancy, at so late a period of the world as that in which he lived. This shows how little he was aware that, at the very time he was writing, and till near the close of the century, the ancient delusion still had its votaries. Humboldt informs us, that between 1766 and 1777, Don Manuel Centurion, then governor of Spanish Guiana, displayed a zeal for the discovery of El Dorado worthy of the brightest era of the fable. It was then that the false reports of a native Indian induced a small body of colonists once more to set out upon this luckless enterprise; and only one of their number, Don Antonio Santos, returned to recount the disasters which had left him the sole survivor of an expedition which crowned more than two centuries of pernicious delusion. An alluring phantom, operating upon the love of the marvellous and the love of gain, thus long beguiled and mocked the world; and transmitted to posterity a tragic tale so singular, that all sympathy for the miseries which it

cites, is extinguished in the ridicule with which they are now regarded.

Though Raleigh's purposes regarding Guiana remained unchanged ; though, as we have seen, he took measures, soon after his return, to maintain his footing in and to augment his knowledge of the country ; the public employments to which he was speedily called, rendered it impossible for him to devote himself personally to the prosecution of his designs ; and when his restoration to favour took place, his services at court, his endeavours to obtain preferment, and his rivalry with other aspirants to royal regard, so much engrossed his time, that Guiana, though not expelled from his thoughts, ceased during the rest of that reign to share his active pursuits. The public services in which he was now engaged, afforded him an opportunity of distinguishing himself in two very brilliant actions ; the destruction, in 1596, of the Spanish fleet and shipping in the harbour of Cadiz, and the capture, in the following year, of the capital and island of Fayal, one of the Azores. On both occasions, Raleigh held the rank of Rear-Admiral. Cadiz, to borrow the expressive words of Lord Bacon, 'was one of those glorious acquests obtained

'sometimes in the bravery of wars, which cannot be kept without excessive charge and trouble ;' but its capture, and that of the fleet there stationed, inflicted, notwithstanding the necessity of abandoning the place, the most humiliating blow the Spanish monarchy ever sustained. It is not saying too much in Raleigh's behalf to state, that this signal success was in no small degree owing to his valour and skill.\* He wrote a clear and animated account of the action, which is to be found in his works. That action, in which he received a severe wound in one of his legs, was remarkable for the chivalrous emulation of the several commanders, who seemed as if engaged in a race for glory, in which each strove to be foremost, without any regard to the orders of a superior, or the rules of naval warfare. The spirit of chivalry had not yet yielded to authority, nor had discipline been adjusted to a settled course of command and obedience. Essex, who held the chief command, had long been in bitter opposition to Raleigh ; but the latter, though sometimes represented as of a less generous nature, showed on this occasion that he could bestow high praise on his rival, and in a way

\* Birch's *Mem. of Queen Eliz.* ii. 54—96-7.

certain to meet the eye of their royal mistress. In a letter which he wrote to Cecil immediately after the action—of which no part, in as far as we know, has ever before been published—Essex is thus eulogized: ‘The Earl hath behaved himself, I protest unto you by the living God, both valiantly and advisedly in the highest degree, without pride, and without cruelty, and hath gotten great honour and much love of all.’\* The differences between these ambitious leaders were widened, not originated, as Hume has stated, by Raleigh’s capture of Fayal, before the arrival of the Earl, his superior in command: but in this proceeding he appears to have been fully warranted by the exigencies of the case; and his conduct, at any rate, was such as greatly to increase his renown. He alludes to this enterprise, in some observations upon naval invasions, in his ‘History of the World’; and Sir Arthur Gorges, who was next in command under him, has devoted to it a treatise fraught with much collateral learning upon the art of war.†

In the interval between the expedition to Cadiz and that to the Azores, Raleigh was restored to the

\* Brit. Mus. MSS. Vespas. xiii. 290.

† Gorges’s *Relation of the Island Voyage*: Purchas, iv. 1938-69.

office of Captain of the Guard; and we are told by one of the court intelligencers of the time, that he rode abroad with the Queen the same day, and forthwith frequented the privy chamber 'as boldly 'as he was wont to do before.'\* An after result of his renewed favour, was his appointment to the Governorship of Jersey, the last act of his sovereign's munificence towards him. The court intrigues in which he was so deeply engaged towards the close of her reign, present some scenes of considerable interest; particularly those where he is seen acting the part of mediator between Essex and Cecil, and where the three meet to dine in private, to ratify that treaty of amity which he negotiated, so much to the surprise of their fellow-courtiers.† These amicable relations were not, however, of long continuance; for we find Essex, in 1599, shortly after going to Ireland as Lord-Lieutenant, writing to the Queen in terms of bitter hostility to Raleigh;‡ and Cecil, immediately after the fall of the former, endeavouring, by means of a secret correspondence with her successor, to prejudice that Prince against his former associate. History has

\* *Sydney Papers*, ii. 54-5.

† *Ibid.* ii. 24, 37, 42, 44.

‡ *Birch*, ii. 418.

left us in the dark as to the particular causes of these alienations; but they no doubt originated in the mutual jealousies and apprehensions of these ambitious and intriguing statesmen. When Essex approached the crisis of his mad career, he accused Raleigh and some of his friends of a design against his life, and of an intention to secure the succession to the Infanta of Spain; but his adherent, Sir Christopher Blount, who confessed that he had intended to assassinate Raleigh, further declared, that these charges were 'only cast out to colour other matters.'\* Raleigh has been thought by Hume and others to have urged the execution of Essex—an opinion founded upon a very remarkable letter of his to Cecil;† but which, as it is not dated, leaves it uncertain whether it was written before or after the Earl's condemnation. In point of sagacious but cold-blooded advice as to the expediency of subjugating a dangerous adversary, it is a masterpiece; but if viewed as an exhortation to deprive Essex, not merely of liberty and power, but of life, it is calculated to revolt every generous feeling, and to fill the mind with deep dislike of its author. We are, however, strongly inclined to think that it does

\* Birch, ii. 478.—Blount's Trial.

† Murdin, p. 811.

not refer to the Earl's execution; but merely to the propriety of reducing him to a condition in which he should neither be able to disturb the state, nor to injure those whom he considered his enemies. Such advice may not have been very high-minded; it may have been dictated by keen resentment: but, considering the enmity and recklessness of Essex, and the designs of his adherents, it can hardly be considered as either unnatural or surprising. The belief that he took pleasure in the untimely fate of his rival, seems undoubtedly to have been general; and it was manifested at the place of execution, where he received a hint to withdraw. With reference to this, however, it ought to be remembered that he attended officially as Captain of the Guard, and that he was also present in that capacity at the execution of Blount—a fact which Hume appears to have overlooked. It was when returning in his boat from Essex's execution in the Tower, that the thought first flashed into his mind, that the power of Cecil, now greatly augmented by the removal of so formidable a competitor, might prove destructive to himself,\*—a foreboding too certainly destined to be verified.

\* Osborn's *Deductions from the History of the Earl of Essex*.

We think it not a littlē surprising that neither Mr. Tytler nor Dr. Southey has alluded to the well-known fact, that Raleigh contrived to turn his influence with the Queen to good account, by procuring pardons for such of Essex's condemned adherents as could afford to purchase his interference. The circumstance surely required some notice from these writers. Its truth is beyond question. Sir Edward Bainham and Mr. Littleton, two of those condemned, obtained through Raleigh's intercession a remission of their sentence, for which they each gave him a very large sum—in other words, a bribe. Littleton, who was a man of ample fortune, much esteemed, according to Bacon, for his 'wit and valour,' and who appears to have had some particular connexion with Raleigh, addressed him in a very moving yet high-minded letter, soliciting his good offices;\* but this letter, which Bishop Hurd in his *Dialogues* pronounces one of 'the finest that ever was written,' did not produce the desired effect till the applicant paid his intercessor ten thousand pounds. But it would not be fair to Raleigh to mention such a fact, without accompanying it with this excuse,—that he only did what

\* It is printed by Birch, *Mem. of Eliz.* ii. 496.

was done by those among whom he lived, and by whom his conduct was to be judged. It was a period in which every department of public life was tainted with corruption. The favour of the sovereign, in regard to all that depended upon the executive, was purchased by presents. Ambassadors from foreign powers procured the support, or insured the neutrality of adverse parties, by liberal donations and pensions. Place and preferment were obtained by those who could afford to give a powerful courtier a large donation for his secret services. The course of justice was not free from the effects produced by gifts to legal officers. Even the ladies about the person of the Queen were accustomed 'to grange and huck causes.'\* In judging of Raleigh's conduct in the case in question, we must therefore give him the benefit of the existing usages; for though the distinctions between right and wrong, abstractedly considered, are immutable, it would be unfair to judge with the same rigour those immoral acts which originate in the customs, or have the countenance of contemporaries, as we do those which have no such sanctions, and can only be referred to individual guilt. We would

\* Birch, i. 35.

judge of Raleigh as of his illustrious contemporary Sully, who in his Memoirs makes no scruple to confess that, at the sacking of Villefranche, he took a thousand pieces of gold from an old man pursued by the soldiery, who eagerly offered that sum to save his life! Would any one, without the contamination of evil times, venture to make such a confession?

We could wish, before leaving that portion of Raleigh's history which closes with the reign of Elizabeth, to advert to his appearances in a field where he seems to have been eminently qualified to shine, and from which he was ever afterwards excluded by his early misfortunes in the next reign—we mean the House of Commons; but the more disputable parts of his story compel us to dismiss this with one or two remarks. Judging from even the scanty reports of his speeches preserved by D'Ewes, they appear to have displayed large and original views both of foreign and of domestic policy. In an age when the cardinal principle of economical legislation was that of the necessity of regulating individual labour and skill to ensure national prosperity—when, in other words, the principle that industry, in order to be well directed, must be constantly subjected to positive

regulations—a principle which still in some degree continues to influence European policy, Raleigh anticipated the most comprehensive conclusion that modern political economy has established with reference to this subject; for he on all occasions inculcated the propriety of leaving every man free to employ his labour and capital in the way he might judge most beneficial for himself. Such was the doctrine he maintained in regard to the compulsory cultivation of hemp. ‘I do not,’ said he, ‘like this constraining of men to manure or use their grounds at our wills; but rather wish to let every man use his ground for that for which it is most fit, and therein follow his own discretion.’ Simple as this recommendation may now appear, its inculcation as a rule for the guidance of statesmen was a vast and beneficial advance in the science of legislation; for the interference thus condemned was the favourite policy of all the greatest statesmen of that day, Lord Bacon among the rest. Its principle lies at the foundation of those laws of Henry the Seventh, which Bacon so emphatically extols, in his life of that sovereign, for their depth and comprehensiveness. Raleigh held the same language in one of the debates as to the propriety

of repealing the famous statute of tillage, in which he earnestly advocated the policy of setting free the trade in corn; observing, ‘that the Low Country-men and the Hollanders, who never sow corn, ‘have by their industry such plenty, that they can ‘serve other nations; and that it is the best policy ‘to set tillage at liberty, and leave every man free; ‘which is the desire of a true Englishman.’ These are noble words for a legislator of that age, and well worthy of remembrance.

The death of Elizabeth, and the accession of James, lead us immediately to the darkest portion of Raleigh’s history; that, namely, which relates to the famous conspiracy in which he was soon after implicated. We do not by any means imagine that we shall be able to clear up its obscurities, or to remove effectually the doubts with which it is overhung; but we think that we shall be able, by an impartial consideration of the printed authorities, combined with the important information contained in the Count de Beaumont’s despatches, which, though they still remain in manuscript, we happen to have perused, to exhibit a tolerably satisfactory view of the probabilities of the case. Beaumont was the resident French Ambassador at the Eng-

lish Court at the period of the accession; and his despatches to his Sovereign, and his minister Villery, are replete with details concerning the conspiracies which so early disturbed that at first rapturous occurrence. Carte is the only British writer by whom they have been examined. All others who have referred to them, have taken their information at secondhand from him; and though we do not say that he has left any important facts unrevealed, we are inclined to think that the conclusions to which these despatches lead, may be better discriminated and elucidated than in his narrative.

Popular as Elizabeth was, our history has no record of so joyful an accession as that of James. It was hailed with acclamations by all classes of the people. But the national joy was destined to be overcast in the very dawn of its existence. A nearer view of James's person and manners speedily dispelled those illusions which the people, long subjected to a female sovereign, had fondly attached to the name of king; and some early examples of his imprudence and misgovernment, produced a strong apprehension that they had been deceived by the accounts spread abroad of his regal wisdom.

The rapacity of his Scottish followers, and his ill-judged haste to gratify them, excited the disgust and resentment of the whole nation. The Catholic portion of his subjects, who, according to Beaumont, had been among the foremost to welcome his accession, and in behalf of whom this ambassador had ventured to solicit some marks of favour, calculated to save them from becoming the tools of Spanish desperadoes, soon perceived that he was in no respect inclined to relax the rigorous policy of his predecessor. The Puritans, who had also cherished fallacious hopes, were doomed to be equally disappointed. Murmurs and discontents were the natural consequences; and some malcontents, as furious in their resentments as they were rash in their purposes, proceeded to form treasonable designs against the person and government of the new sovereign. But before entering into any details regarding them, we must attend to such occurrences subsequent to James's accession, and to such particulars of Raleigh's treatment and conduct, as appear necessary to be kept in mind in judging of the probability of his being a participator.

Immediately after the death of Elizabeth, a meeting took place at Whitehall of the chief public men

then in London, for the purpose of proclaiming her successor; and Raleigh's name occurs among those subscribed to the writing framed on that memorable occasion.\* An opinion, however, was entertained by some, of whom Raleigh was one, that James's power of appointing his countrymen to places of trust and emolument in his English dominions, ought to be subjected to some limitations. Mr. Tytler seems inclined to question Raleigh's assent; but as his opinion is not supported by any authority, and runs counter to the statements of Osborn, Aubrey, Lloyd, and some others, it may be unhesitatingly discarded. If such a proposition could be entertained by so aged and discreet a counsellor as Sir John Fortescue, it was likely enough, surely, to find favour with Raleigh. Aubrey goes a great deal farther, and ascribes to Raleigh a proposal not a little calculated to awaken curiosity, but to which neither Mr. Tytler nor Dr. Southey adverts;—a proposal to pull down the monarchy, and substitute a republic! Aubrey avers that this proposal was advanced by Raleigh at the abovementioned meeting at Whitehall. 'Let us keep the staff in our own hands, and set up a

\* *Carte*, iii. 708.

'commonwealth, and not remain subject to a needy and beggarly nation'—were the words which he is represented to have there uttered. Dr. Warton might well consider this as a remarkable anecdote,\* if indeed it could be viewed as true. But it rests wholly on the authority of this credulous collector of historical gossip ; and though it partakes of Raleigh's bold, aspiring, and scheming disposition, the supposition of the possibility of establishing a republic at that time, is much too preposterous to allow us to imagine that it could be broached by a man of his understanding, and to such an assembly as that to which it was said to have been addressed.

But, independently of these facts, there were other causes of that dislike to Raleigh which appears to have been early manifested by the King ; and which, indeed, existed before he set foot in his English dominions. We allude to the attempts so successfully made by Cecil and his accomplices, in their secret correspondence with James, to impress him with the belief that Raleigh was closely leagued with a party unfriendly to his title, and

\* In a note to his edition of Pope, in one of whose 'Epistles' allusion is made to Raleigh's archaisms.

bent on opposing his succession. All who have perused that very curious correspondence, as published by Lord Hailes, must remember the malignant representations of Raleigh with which it teems, and the unexampled terms of abuse there applied to him and some of his friends. It is therefore surprising that any biographer of Raleigh should cast about for hypothetical explanations of a dislike, so easily accounted for by referring to known causes. Mr. Tytler imagines that it was owing to Raleigh's being unable to conceal his contempt of 'James's displays;' and because he declined 'to imitate the flattery with which others fed his vanity.' Now, there is nothing more certain than that Raleigh never allowed an aversion to flattery to stand in his way; and it is equally certain that he evinced his readiness to feed James's vanity, with reference to those 'displays' to which Mr. Tytler alludes. 'I took it as a great comfort,' says he, in a letter to the royal pedant, 'to behold your Majesty; always *learning some good, and bettering my knowledge, by hearing your Majesty's discourse.*' Raleigh's disfavour was far enough from being owing to his sparingness in the administration of the unction of flattery.

There can be no doubt, in a word, that the Scottish King entered England with a mind strongly prepossessed against him; and that Cecil found it an easy task to complete the overthrow which his correspondence had prepared. James had arrived at York, in the prosecution of his intoxicating 'Progress' to the capital, before Cecil presented himself before him. The Count de Beaumont says that he was blamed for leaving London at that critical juncture; but he doubtless felt it to be indispensable that he should repair to James, as well to furnish that information of which he and his Scottish courtiers were alike in want, as to take measures to crush those who might be competitors for favour or power. Raleigh, in particular, was the man he most feared;\* and one of his first cares was to put a stop to that intercourse with the King, which would have resulted from his continuing in the office of Captain of the Guard. That office, which Raleigh had held with so much distinction during the late reign, was speedily bestowed upon a Scottish favourite; and Cecil is said to have induced the King to take this step, by impressing him with the belief that the removal

\* Carte, iii. 709.

of one so much disliked would be highly acceptable to the people of England.\* The extreme unpopularity of a man of such great and various talents, so distinguished for courtier-like accomplishments and martial achievements, has always appeared to us a perplexing part of Raleigh's history; and not to be accounted for either by his haughty demeanour, or his enmity to Essex, the favourite of the people. The belief that he was not over-scrupulous in his regard for truth—that his great and brilliant qualities were tarnished by craft and rapacity—that, as Ben Jonson alleged, 'he esteemed fame more than conscience'—were, we suspect, the principal sources of the hostile feeling exhibited towards him, and which never, without strong cause, takes place of the esteem universally entertained for genius and valour. But be the cause what it may, the fact is unquestionable; and indeed we find his friend the Earl of Northumberland not merely acknowledging it, but alleging that he had himself suffered in public opinion from his long and intimate connexion with him.† Still, there

\* Beaumont, *Dépêche*, May 2, 1603.

† See a remarkable letter, not noticed by either Mr. Tyler or Dr. Southey, though published in so well known a work as Miss Aiken's *Memoirs of the Court of James*, i. 58.

can be no doubt that Cecil, who had long associated with and courted him, was now actuated solely by his own personal animosities and selfish apprehensions. Raleigh, as soon as he was apprised of his machinations, set out in haste to counteract them, by making some disclosures touching the execution of Queen Mary, and other matters, calculated, as he imagined, to make a strong impression upon the feelings of her son; but the crafty Secretary had taken his measures too well and too securely; and was, besides, too necessary to James and his Scottish ministers, ignorant as they were of English affairs, to give his adversary any chance of success from this attempt. Its only effects were to widen existing differences, and to furnish additional aliment to that discontent, which soon became conspicuous to all.

Raleigh's disappointments were not limited to those arising from loss of office and court favour. His fortune had been impaired by the expenses connected with the various expeditions which he had fitted out for Guiana, where he ever had hoped that, when circumstances were propitious, he should yet reap a golden harvest. This notion—the abiding vision of his changeful life—would naturally revisit

his mind and rekindle his hopes when he was deprived of place and favour in his own country. But, in the pacific temper of James, and his ardent desire to conclude a peace with Spain, Raleigh saw the destruction of his favourite project. His notions of foreign policy, in which he was more largely skilled than any other statesmen of that day,\* and a strong conviction of the expediency of upholding the United Provinces, in that glorious struggle for independence in which they had been so effectually aided by Elizabeth, seem to have led in the same direction with his own particular designs. We learn from one of his letters, that he made an offer to the King to raise, at his own cost, two thousand men, to attack Spain in her most vulnerable quarter—her American possessions. The answer is not mentioned; but no reply to any such proposal could, in James's temper of mind, be otherwise than unfavourable; and we may even suppose that, personally and politically timid as he was, it might increase his dislike of a man who could harbour such daring purposes.

\* ‘He seemeth wonderfully fitted, both by art and nature, to serve the state; especially as he is versed in foreign matters, his skill therein being always estimable and praiseworthy.’—Sir John Harrington’s Letter to the Bishop of Bath and Wells—*Nugæ Antiquæ*, i. 342.

Raleigh at this time also wrote a discourse—one of the most remarkable of his smaller pieces, not for its composition, which is desultory and slovenly, but for the depth of its general views, and the pregnant variety of its illustrations—on the policy of continuing the protection of England to the United Provinces, so as to enable them to establish their independence. This tract he had intended to present to the King, to whom it was addressed, but did not find an opportunity. James, as is well known, was ultimately prevailed upon by Sully, the extraordinary ambassador of Henry the Fourth, to continue to the States that support for which Raleigh so urgently pleaded. But the certainty of that consummation, could he have anticipated it, would have been far from satisfying his desires. Bred in a school which classed Spain with the Pope and the Devil, and looked upon her American possessions as the appropriate field of English adventure and spoliation, Raleigh strenuously urged that the war with Spain should be continued; and he endeavoured to show, that she was then so greatly reduced as to be incapable of withstanding the naval power of England; but that, if peace should be conceded, and time allowed her to repair

her losses, the former would come to regret her forbearance and lost opportunities of glory and conquest, when all who could effectually serve her would be removed from the scene. This piece is the more deserving of notice, that it was written when its author was on the eve of being accused of a treasonable plot, to be carried into execution through the agency of that power which he there treats so contemptuously, and to which he evinces so rooted a dislike!

But, notwithstanding all his mortifications and disappointments, we find Raleigh vehemently protesting that he was in no degree soured by them. Thus, in the discourse just mentioned, he assures the King, that it ‘proceeds from an humble and ‘faithful heart, which his Majesty cannot beat from ‘the love of his royal person and good estate;’ and in a letter, written shortly after he was charged with treason, he makes this solemn asseveration: ‘The great God of heaven and earth so relieve ‘me as I was the reverse of discontented.’ We would fain believe that his fancy here deceived him; for it is impossible to shut our eyes to the fact of his discontent—a fact in itself both probable and natural, and which all contemporary authority attests.

The evidence of Sully, though there were none else, would be decisive; for it is that of a most competent and disinterested observer, pronounced after much private and confidential intercourse. It does not, indeed, warrant the statements which Carte and Hume have founded upon it, and which represent Raleigh and some of his associates as having solicited both Beaumont and himself to aid them in certain treasonable designs; but it pourtrays them as restless and speculative malcontents, not greatly indisposed to embark in designs hostile to their sovereign and to the state.\*

James had been only about three months seated on his new throne, when the discovery of more than one treasonable plot took place.† That which was first brought to light, never has been a subject of doubt either as to its objects or the persons concerned in it. It seems to have originated with two priests, named Watson and Clarke. Their design was to seize the King while engaged in his fa-

\* See Sully's despatches, contained in the original edition of his Memoirs, entitled, *Mémoires des Sages, &c.*, ii. 125, 148.

† In a copy now before us, of a paper in the handwriting of Sir Edward Coke, preserved in the State-Paper Office, he makes an abstract of evidence with reference to *three plots*, described by him as the 'Spanish, or Cobham's treason,' the 'Priests' 'treason,' and 'Lord Grey's treason.'

vourite occupation of hunting, and then to carry him to the Tower or some other place of strength, there to be detained till he should new-model his ministry agreeably to their wishes, and grant toleration to the Catholic religion. Among their first associates were George Brooke, brother to Lord Cobham, Sir Griffin Markham, and a Catholic gentleman of the name of Copeley; and a communication having been opened through Brooke with Lord Grey of Wilton, a zealous Puritan, who appears to have been ready to embark in any treasonable project, they began to apportion among themselves the different offices of the new administration which they wished to form, and to deliberate as to the time for proceeding to action. But jealousies and misgivings speedily arose to distract their machinations. Grey, a young man of talents and ambition, became apprehensive that if the plot succeeded, the Catholics might obtain some advantage over his own sect; and he therefore opposed any movement until he should strengthen himself with an armed force, which he secretly hoped to obtain permission to embody, under the pretext of employing them in the Netherlands. In this way the day of action was postponed; but with an

understanding that every possible effort should be made to increase the number of confederates.

Coincident with these treasons was another, called 'the Spanish or Lord Cobham's treason.'\* This weak, but intriguing and opulent nobleman, who had lived much in Raleigh's society, and been an active partisan in the quarrels with Essex, was much at variance with Cecil, who was his brother-in-law; and the King having, in consequence of the Secretary's representations, treated him coldly when he went to join the royal Progress, his resentment rose to a high pitch against both sovereign and minister. His notorious disaffection encouraged his abler brother, George Brooke, to disclose to him the plot of the Priests; and the idea seems to have been started by one or other of them—in all probability Brooke—that, could adequate assistance be procured from Spain, James might be dispossessed of the throne, and his cousin the Lady Arabella Stuart advanced to it in his stead. The same notion, according to Beaumont, occurred, but without leading to any concerted plan, to some of those engaged in the other treasons. Cobham agreed to

\* So designated, in the analysis mentioned in the foregoing note, by Sir Edward Coke.

apply to Spain for money, and accordingly made an application to that effect to Count Aremberg, immediately on his arrival in London, as the temporary representative both of the Archduke of Austria and of the King of Spain. He appears to have had some previous intercourse with that minister; and to have been particularly acquainted with a person in his retinue of the name of La Renzi, who was in consequence employed as the agent of their secret correspondence. Brooke undertook to persuade the Lady Arabella to enter into their views, and to prevail upon her to write to the Archduke and the King of Spain—pledging her lasting friendship, and engaging to be guided by them in the choice of a husband, in the event of her being elevated to the throne through their assistance.

But all these treasonable schemes were overset, before they had ripened into any determinate or connected plan, through the fortunate imprudence of Copeley. On going from home, he told his sister that he was engaged in a great and dangerous undertaking for the good of the country. His words, having made a strong impression, were repeated to her husband, and by him to the Lord Admiral, who, in consequence, caused Copeley to

be apprehended; and he having made a full disclosure of the plot of the Priests, they and their accomplices were seized and imprisoned.\*

When Cecil heard that Brooke was one of the conspirators, he naturally inferred that his discontented brother Cobham might be concerned; and Raleigh's intimacy with, and ascendancy over the latter, exposed him, in the ready mind of the Secretary, to a similar suspicion. He was accordingly, on Cecil's suggestion, examined, in presence of some of the Lords of the Council, as to whether he had any knowledge of the plot divulged by Copeley. He unhesitatingly declared his utter ignorance of it; and he stood quite free from any disloyal imputations, till Brooke, in his examination, disclosed his brother Cobham's intrigues with Aremberg; adding, that the former had told him their intercourse was known to Raleigh. Being in consequence again examined, he, equally as before, declared that he was wholly ignorant of any criminal correspondence between Cobham and the Flemish Minister: but either at that examination, or soon after, he appears to have stated that he knew there was some intercourse between them; and he farther

\* Beaumont, *Dsp.* May 12—June 13—July 30, 1603.

suggested, in a private letter to Cecil, that La Renzi might be examined as the person most likely to be informed of its nature. This suggestion—most extraordinary if that of a guilty participant\*—was productive of lasting misfortune to its author. Cobham had before been examined without effect; but the letter to Cecil having been unwar-rantly shown to him, he instantly became enraged against Raleigh; charged him with having insti-gated all his dealings with Aremberg; confessed that it had been agreed, with Raleigh's privity, that he should proceed to Spain to negotiate for money, Aremberg being unable to engage for all that was wanted; and that he was to return by Jersey, of which Sir Walter was governor, there to consult as to their farther proceedings. In almost the same breath, however, he admitted his having become apprehensive that, if he did so return, Raleigh would seize and deliver both the treasure and himself to the King. Nor was this all. As soon as he became cool, according to one account, or after a private remonstrance from Raleigh, ac-

\* So thought one who was present at his trial.—See Sir Toby Matthews's *Collection of Letters*, published by Dr. Donne, p. 281. Sir Thomas Overbury, who also was present, expresses himself to the same purpose.—*Arraignment of Sir Walter Raleigh.*

cording to another, he fully and solemnly retracted all that he had laid to his charge.\*

Raleigh was nevertheless, towards the end of July, committed to the Tower. But, previously to this, he appears to have acknowledged that Cobham, on the part of Aremberg, had offered him a sum of money, or a pension, on condition of his using his endeavours to promote a peace between the two crowns: and as Brooke had confessed that Cobham had also promised money for distribution among the associates of the Priests, it appears to have been thought that the acknowledged offer to Raleigh was for similar treasonable purposes. When informed of this injurious construction, he addressed a letter to the Lords of the Council, in which, after repeating the purport of Cobham's offer, he made a solemn renunciation of all claim to mercy, if it should ever be shown that he was aware of its connexion with any treasonable design. But this address, which was powerful and eloquent, does not seem to have made any impression. Yet, as he had not been accused of any participation in the plot of the Priests, and as Cobham's accusation respecting his treasonable dealings with Aremberg

\* Beaumont—Carte—Overbury.

had been retracted, the Council appear to have been somewhat doubtful of the propriety of any farther proceedings against him. Cecil, unwilling that he should escape, caused a strict inquiry to be made among all likely to be acquainted with his secrets; but the investigation ended without eliciting any discovery calculated to gratify the enmity of the minister.\*

We must not, in the history of these proceedings, omit the mention of a remarkable incident, by no means favourable to Raleigh's character, and which, accordingly, Mr. Tytler's partiality induces him to question. One afternoon, while Cecil and others of the Council were engaged in the examination of the other prisoners in the Tower, Raleigh made an attempt at suicide, wounding himself rather severely by a stab in the breast. 'When 'we were advertised of it,' says Cecil, 'we came 'to him and found him in some agony, seeming 'to be unable to endure his misfortunes, and pro-'testing innocence, with carelessness of life.'† He had often expressed his firm belief, that the ad-

\* Beaumont, *Dép.* August 13.

† Letter to Sir Thomas Parry, 4th August 1603, in Cayley's *Life of Raleigh.*

ministration of the law of treason was such as to enable his enemies to effect his condemnation though innocent ; and on this occasion, his proud spirit seems to have hurried him on to the rash determination to deprive them of the means of achieving such a triumph. A recent publication respecting the reign of James, furnishes us with a very affecting letter from Raleigh to his wife, written in contemplation of suicide. We do not refer to it for evidence of the fact ; for that was long ago incontrovertibly established, not only by the above communication from Cecil, but by Beaumont's despatches to his court, and by a contemporary letter published by Sir Toby Matthews. We refer to it as being in itself remarkable, and as showing that the deed which he meditated ought not to be viewed as the act of conscious guilt, but rather as that of ungovernable and despairing pride. 'I 'cannot live,' says he, 'to think how I am derided '—to think of the expectation of my enemies—the 'scorns I shall receive—the cruel words of law- 'yers—the infamous taunts and despites—to be 'made a wonder and a spectacle.' His allusions to the sad consequences of his misfortunes to his family, and to the revolting nature of the imputa-

tion of plotting with Spain—the enemy he had ever hated and sometimes scourged—are touching and indignant; indicating a proud consciousness of his own merits and services, now forgotten by his country. ‘I am left of all men, that have done ‘good to many. All my good turns forgotten, all ‘my errors revived and expounded to all extremity ‘of ill: all my services, hazards, and expenses for ‘my country—plantings, discoveries, fights, councils, ‘and whatsoever else, malice hath now covered ‘over. I am now made an enemy and traitor by ‘the hand of an unworthy man: he hath proclaimed ‘me to be a partaker of his vain imaginations, ‘notwithstanding the whole course of my life hath ‘approved the contrary, as my death shall approve ‘it.’ But there is nothing more worthy of remark in this very striking letter than its display of great warmth of feeling and tenderness of heart, joined with much worldly wisdom and calculating prudence—the one exemplified in his agonizing emotions on taking leave of his wife; the other, in his recommendation to her to marry again, but not for love—‘only to avoid poverty;’—and to overlook Cecil’s conduct to himself, ‘because,’ says he, ‘he must be master of your child, and may

'have compassion on him.' 'I know,' he adds, 'that it is forbidden to destroy ourselves; but I trust it is forbidden in this sort—that we destroy not ourselves despairing of God's mercy.'<sup>\*</sup>

After much delay and discussion, it was at last resolved that Raleigh should be brought to trial with the rest. The confessions of most of them had left no doubt either of their guilt, or the certainty of their condemnation; but as regarded him, it was the general opinion that there were no grounds for a conviction.<sup>†</sup> His own opinion was not so sanguine. He dreaded the influence of his enemies, then at the head of affairs; and he entertained the most discouraging ideas of the state of the law in regard to trials for treason. It was under these impressions that he endeavoured, by a letter to the King, to conciliate his favour; but considering the known sentiments of James, who, as Beaumont says, both feared and hated him, it can scarcely be thought that he could found any strong hopes upon such an appeal. He first of all respectfully alludes to the duty of a good king 'to hear the complaints of his vassals, especially

\* Goodman's *Court of King James*, ii. 93.

† Beaumont, *Dsp.* 27th October.

'such as are in great misery:' and after entreating his Majesty 'not to believe any of those who, under 'pretence of his treason, only sought to work out 'their own revenge,' he proceeds to make this solemn asseveration: 'I protest before the everlasting God, 'that I never *invented* treason, *consented* to treason, 'nor *performed* treason; and yet,'—he adds with that strong presentiment he ever, since his imprisonment, expressed,—'I know I shall fall into the 'hands of those from whom there is no escape, 'unless by your Majesty's gracious compassion I be 'sustained.'

These touching notes fell upon an ear wholly irresponsible to them. As soon as Aremberg left England, which he did about the end of October, the trials commenced. They were delayed till his departure from apprehension either that he might himself be so irritated, or the people so inflamed by the disclosures likely to ensue, as to cause the defeat of those negotiations which James was so passionately desirous to bring to a favourable close. Raleigh, meanwhile, contrived to procure from Cobham a letter, acquitting him in very earnest terms of the treasonable practices with which he had charged him; and being thus possessed of a written

disclaimer under the hand of his only accuser, he awaited the issue, it may be supposed, with more composure. The prevalence of the plague in London having rendered it prudent that the Commission for the trials should hold its sittings at Winchester, the prisoners were, towards the middle of November, carried thither. Raleigh was conveyed in his own coach, under the custody of Sir Robert Mansel; and from what befell him on the way, he had reason enough to see, that, be his fate what it might, he was not likely to meet with any popular sympathy. ‘It is almost incredible,’\* says a contemporary, ‘with what bitter speeches and execrations he was exclaimed upon all the way; which they say he neglected and scorned, as proceeding from base and rascal people.’

Upon the fifteenth, the two Priests, and their principal associates, were tried and condemned upon their own clear and ample confessions. ‘These,’ says Sir Dudley Carleton, who was present, ‘were set down, under their own hands, with such labour and care to make the matter they undertook seem very feasible, as if they had feared they should

\* Letter from Mr. Hicks to the Earl of Shrewsbury. Lodge’s *Illustrations*, iii. 75.

'not say enough to hang themselves.' Raleigh's\* trial took place two days after. The Commission consisted of the great officers of state, some of whom were his known enemies, and four of the ordinary judges. The proceedings commenced at eight in the morning, and ended about seven at night. The main charges of the indictment were—that he had joined Lord Cobham in a conspiracy against the life of the King and his issue; that their purpose was to raise the Lady Arabella Stuart to the throne; and that they had applied to Count Aremberg for money and a Spanish force, to aid them in the execution of their designs. Sir Edward Coke, then Attorney-General, was the chief conductor of the trial on the part of the Crown; and his management of it was such as Hume—no partial narrator—describes as calculated to leave an indelible stigma not only upon his own character, but in some sort upon that of his age and country. 'Traitor, monster, viper, and spider of hell, were 'the terms,' says the historian, 'which he employed 'against one of the most illustrious men of the 'kingdom, who was under trial for life and fortune,

\* *Hardwicke State Papers*, i. 378.

'and who defended himself with surprising temper,  
'eloquence, and courage.'

It was upon Cobham's accusation that the Crown lawyers chiefly rested their case; and in support of it they adduced the testimony of La Renzi, who deposed that Raleigh had been present, and in private with Cobham, when he received letters from and transmitted others to Aremberg. They further appealed to the fact, that Raleigh, after his own examination, and before Cobham was called in question, wrote to him 'that he had cleared him;' in order, as they alleged, to caution him against making any disclosures. With respect to the first of these allegations, Raleigh contended that La Renzi's testimony only proved his knowledge of some correspondence between Cobham and the Flemish minister, but not that he knew there was anything treasonable in it: and as to the other, he stated in explanation, that having had occasion, in a matter of business, to inform Cobham that he could not see him as he was under restraint, he indeed added 'that he had cleared him;' because, in point of fact, he had observed to Cecil, when conversing with him as to the plot of the Priests, that he did not believe Lord Cobham was

concerned in it. He also pleaded, that it was from Cobham's accusation alone, which had been retracted, that these allegations derived any suspicious colouring; that in no view could they ground anything against him but presumptions; and that, if presumptions were to be taken into account, those in his favour would far outweigh any that could be urged against him. His reasoning and eloquence were here cogent and persuasive. He appealed to the whole course of his public life, as bearing testimony to his rooted enmity to Spain; and to the fact, that his best hopes lay in the continued prosecution of his designs against her. Nothing, he said, could exceed the improbability of the supposition that he—who had just written a treatise to expose the weakness of Spain, as an argument for continuing the war till she should be thoroughly humbled—could for a moment believe her capable of accomplishing such an enterprise as that of placing on the throne of England a female, destitute alike of title and support; or that he was likely to embark in a conspiracy for such an object, with no other ally but Lord Cobham—notorioualy one of the weakest and least respected men of his rank in England.

Raleigh's defence was not, however, limited to these topics. He further maintained, that even though Cobham's testimony had not been retracted, or in any way damaged, it was not sufficient to convict him; because it was provided by a well-known statute of Edward the Sixth, that conviction in cases of treason could only take place upon the evidence of two witnesses confronted with the accused. He handled this point with great learning, acuteness, and dexterity; but his argument was met by proofs of a contrary practice, which had long, though improperly, been judicially recognised—upon the supposition that the statute in question had been rendered inoperative by a subsequent statute of Philip and Mary. Driven from this ground, he then insisted that he should at least be confronted with his accuser; boldly declaring that if Cobham, on being examined by himself, should repeat his charges, he would then yield himself to judgment without another word. Cobham was at the time in an adjoining apartment;\* but the Crown lawyers knew too well what he was, to subject him to Raleigh's searching interrogations; and the judges, on being appealed to, decided, that there was nothing

\* Sir Toby Matthews's *Collection of Letters*, p. 283.

in the law making it imperative that the accuser should be examined in court.

This point being determined, and the proceedings almost exhausted, the Attorney-General, after a burst of savage joy, as if now sure of his victim's blood, produced a letter which Cobham had, on the preceding evening, written to the Commissioners, in which the infamous changeling again repeated all his retracted accusations. Upon this, Raleigh in his turn presented the letter which he had procured from Cobham, immediately before their removal from the Tower. It was read by Cecil, one of the Commissioners, as being acquainted with his handwriting, and contained these strong asseverations:—‘I protest upon my soul, and before ‘God and his angels, I never was moved by you ‘to the things I heretofore accused you of; and, ‘for anything I know, you are as innocent and as ‘clear from any treasons against the King as is ‘any subject living!’ But this additional retraction does not appear to have effected any change of opinion in his favour; for, immediately after it was read, the jury retired, and returned in a quarter of an hour with a verdict of guilty.\*

\* See *State Trials*—East's *Pleas of the Crown*—Sir Thomas

The Lord Chief-Justice Popham, before pronouncing sentence, addressed Raleigh in one of those ungenerous and unwarrantable harangues, in which the elevation and impunity of the judgment-seat have often, in bad times and by unworthy natures, been taken advantage of to insult the defenceless. In particular, he adverted, in the ranting phraseology peculiar to such places and occasions, to an imputation which Raleigh seems, most unjustly, to have incurred of being an atheist. ‘You have been taxed by the world,’ said this dignified dispenser of justice, ‘with the defence of ‘the most heathenish and blasphemous opinions, ‘which I list not to repeat, because Christian ears ‘cannot endure to hear them, nor the authors and ‘maintainers of them be suffered to live in any ‘Christian commonwealth. You shall do well, be-‘fore you go out of this world, to give satisfaction ‘herein; and let not *Harriot or any such doctor*\*

Overbury’s *Arraignment of Sir Walter Raleigh*—Jardine’s *Collection of Criminal Trials*, i. 389. The last contains the most copious, as well as accurate account of the trial; and is accompanied with an instructive commentary.

\* The words in italics are those given in Mr. Jardine’s excellent compilation. In the *State Trials* the words are, ‘Let not any Devil persuade you.’ But Raleigh’s well-known connexion with Harriot, and the circumstance of the latter having

'persuade you there is no eternity in heaven, lest you find an eternity of hell torments.' The man thus maligned is the author of some of the most striking observations in the language on the being and attributes of the Deity, the grandeur and immortality of the soul, and the Christian religion. The other object of this barbarous attack—the more barbarous as being directed against an absent and unconcerned individual—has left a distinguished name in the annals of scientific discovery. Their robed accuser, who was doubtless told by his flatterers that he had acquitted himself nobly in administering such a rebuke, is only remembered by the anecdote-hunters of his day as having, in his earlier years, been a taker of purses, and in those of his judicial life, a taker of bribes!\* We do not vouch for the truth of these anecdotes; but assuredly his cant and rant do not make them less likely to be true. Raleigh, without deigning to make any remark on what was addressed to incurred a similar imputation, leave no doubt as to the superior correctness of Mr. Jardine's version.

\* 'For several years he addicted himself but little to the study of the law, but profligate company, and was wont to take a purse with them.' 'This Judge had a noble house, park, and manor, for a bribe to save his life.' (The life of one condemned for child-murder.) Aubrey's *Lives*, ii. 492-3.

him, simply entreated that his answers to the principal charges might be reported to the King; and that his execution, in respect of the employments he had filled, might not be ignominious. He then followed the Sheriff out of court, 'with admirable erection,' says Sir Thomas Overbury, 'but yet in such a sort as became a man condemned.' No occasion of the kind ever drew forth a finer eulogium than these few words.

One triumph Raleigh achieved by this nefarious trial—that of overcoming the general dislike of which he was till then the object. He left the court a condemned man, yet amid feelings warmed to a high pitch of sympathy and admiration. All contemporary accounts bear witness to this great and immediate change. Sir Dudley Carleton, who was present, tells us that he conducted himself 'with that temper, wit, learning, courage, and judgment, that, save that it went with the hazard of his life, it was the happiest day that ever he spent.'— Of two persons who brought the news to the King, 'one affirmed, that never any man spoke so well in times past, nor would do in the world to come; and the other said, that whereas when he saw him first, he was so led with the common hatred, that

'he would have gone a hundred miles to have seen  
'him hanged, he would, ere he parted, have gone  
'a thousand to have saved his life.'\* 'In half a  
'day,' says another observer, 'the mind of all the  
'company was changed from the extremest hate to  
'the greatest pity.'

Raleigh, after his condemnation, once more tried, by letter, to move the royal clemency; and no one, as Dr Southey justly observes, ever sued for life 'with a more dignified submission to his fortune.' We allude to the letter chiefly on account of the remarkable expressions in which he refers to Cobham's offers. 'Lost I am for hearing a vain man,  
'for hearing only, and never believing or approving!' Soon after this touching supplication, the Bishop of Winchester, at the King's desire, waited upon him to prepare him for death. That termination of his misfortunes he for some time hourly expected; but the decision as to his fate was day by day protracted; and in the meanwhile the King occupied himself in getting up for public exhibition the most extraordinary tragi-comedy that ever was performed in the administration of criminal justice. After the execution of the two Priests and Brooke, war-

\* *Hardwicke State Papers*, i. 379.

rants were signed for carrying into effect the sentences against Lords Grey and Cobham, and Sir Griffin Markham; ‘the King,’ as was said, ‘pre-tending to forbear Sir Walter Raleigh until Lord Cobham’s death should give some light how far ‘he would make good his accusation.’ At an early hour, upon the ninth of December, the day appointed for their execution, Markham was, first of all, brought upon the scaffold; and having gone through his devotions, was ruefully preparing to lay his neck upon the block, when the sheriff was called aside by a messenger, who came post from the King, and privately communicated his Majesty’s directions to save the prisoners, after each in his turn should have prepared for death. The sheriff accordingly reconducted Markham into the castle, saying that he would give him another hour to prepare himself. Grey was then led forth, and after being permitted to make a speech, alike remarkable for boldness and eloquence, was in like manner reconducted to his prison. Last of all came Cobham, who now, in the immediate prospect of death, averred that all his charges against Raleigh were true. He conducted himself with a fortitude so foreign to his nature, as to lead many to suppose that he had

been promised life provided he should renew his accusations against Raleigh; he having, at his own trial, again partially acquitted him. The other two prisoners were again brought back to the scaffold; and the exhibition closed, to the wonder alike of actors and spectators, with a speech from the sheriff, announcing that his Majesty, of his princely clemency, had respited the whole.\*

Raleigh witnessed this mock tragedy from a window which overlooked the scaffold, and, as Beaumont says, with a mirthful countenance; from which the Count was inclined to conclude that he had received some encouraging intelligence from his friends at court. Until this period, his hopes could not be strong; for the King always replied to the numerous intercessors for his life, that he was firmly resolved to let the law take its course. At one time Raleigh appears to have had cause to believe that his execution was at hand; and in that belief he wrote to his wife to prepare her for the event. The letter is long and impressive; showing in every line what tender feelings existed in a breast that had ever been filled with

\* *Hardwicke State Papers*, i. 391.—Beaumont, *Dép.* 10th and 18th December.

the workings of an ambitious and scheming disposition ; and how little he merited those imputations of irreligion with which the Lord Chief-Judge had aspersed him. ‘God is my witness,’ says he, towards its conclusion, ‘that it was for you and ‘yours that I desired life ; but it is true that I dis-‘dained myself for begging it ; for know it, dear ‘wife, that your son is the son of a true man, and ‘one who, in his own respect, despiseth death, and ‘all his mis-shapen and ugly forms. The ever-‘lasting, infinite, and omnipotent God, who is good-‘ness itself, keep thee and thine, have mercy on ‘me, and teach me to forgive my persecutors, and ‘send us to meet in his glorious kingdom.’

A few days after the above exhibition, Raleigh like the rest was reprieved and reconveyed to the Tower, where he was destined to be confined for the long period of thirteen years. This separation from the world, viewed with reference to the use he made of it, was not to be regretted. But there were other results of his illegal sentence from which his family suffered severely. He had some years before seen cause to convey his estate of Sherborne to his eldest son, reserving his own life-interest which was forfeited by his attainder. But a slight

flaw having been discovered in the conveyance to his son, the estate was bestowed by the King on his rapacious favourite Somerset; his Majesty reserving only eight thousand pounds for Raleigh's family, as a compensation. Their fair inheritance was thus, as the unfortunate father complained in a letter which he addressed to the worthless minion, 'lost in the law for the want of a word.'—But let us now attend to the questions which his trial and sentence present for consideration.

The Count de Beaumont, in a very elaborate despatch written after the trial, and after hearing the reports of various persons who were present, as well as after examining various relative documents, gives it as his deliberate opinion, that Raleigh, though not legally condemned, was nevertheless morally guilty. It is only with reference to this distinction, that there is any room for discussion; for there is, and ever has been, an entire unanimity as to the legal view of the case. Much wonder has been expressed how, upon such evidence, a verdict of guilty could be obtained; but it ought to be recollectcd that Raleigh was extremely disliked both by the sovereign and his ministers; and that in those times the Government

had no surer engine of destruction than a state prosecution. Juries then formed but a feeble shield against the arm of power; and the fact may serve to show how weak are the securities afforded by the best institutions, when the great body of the people are destitute alike of political consequence and general intelligence. The question as to his actual guilt has been differently viewed by different classes of writers. All his biographers, with more or less confidence, hold that he was innocent; while all our general historians of any name, with a pretty near accordance of sentiment, hold that he was guilty. Our own opinion does not in all respects agree with either class. But it would be useless to go further without first disposing of Mr. Tytler's hypothesis, that the plot in question had no existence at all—that it was a mere figment or device, employed to cover the criminal designs of Cecil.

Founding upon an obscure and fantastical letter,\* supposed to be written by Lord Henry Howard—‘that dangerous intelligencing man,’ as Lady Anne Bacon described him†—Mr. Tytler satisfies himself,

\* Published in the Oxford Edition of *Raleigh's Works*, viii.  
756.

† Birch's *Mem. of Eliz.* i. 227.

by some wire-drawn reasonings which we will confess we do not clearly comprehend, that the charges against Raleigh were the result of a contrivance between Cecil and Lord Henry, to implicate him in an imaginary plot to set up the Lady Arabella Stuart. ‘The whole story,’ he asserts, ‘is idle and ridiculous. Whether Cobham had ever conceived such an idea, cannot now be discovered. No one can maintain that such a conceit, imparted neither to Sir Walter, to the other conspirators, or to the lady herself, nor to Aremberg, who was to advance the money, *but kept entirely to himself*, is for an instant entitled to the name of a conspiracy.’ Mr. Tytler has overlooked, as is not unusual with him, some unquestionable facts, in asserting that the proposal as to the Lady Arabella was the uncommunicated conceit of a single brain. That there was no fixed or extensive conspiracy to raise that lady to the throne, may be admitted; but that such a project was entertained by the malcontents of that day, that it was in progress, and that it was propounded to the Archduke and the King of Spain, does not admit of any doubt. Sir John Harrington, a contemporary and no mean authority, says in express terms, in a letter to the Bishop of Bath

and Wells, ‘that the plot was wellnigh accomplished to disturb our peace, and favour Arabella Stuart, the King’s cousin.’ But his testimony forms only a small part of the evidence. Mr. Tytler appears to have been altogether uninformed of the long-subsisting intrigues founded upon the supposed claims of that lady. He seems not to have known that the Lady Arabella’s title was supported by a considerable section of the English Catholics; that the design of raising her to the throne, on the death of Elizabeth, was favoured by the Pope; and that it was the apprehensions thence arising, that caused her being put under restraint immediately on that event taking place. The idea of such a plot was not, therefore, so purely fictitious as he has imagined. The knowledge of the facts alluded to, led the most eminent of our late historical inquirers to conclude, that the plot in question, though ‘extremely injudicious,’ was not so improbable as it at first sight appears.\*

That the notion of setting up the Lady Arabella existed only in Cobham’s brain, uncommunicated to any one, is truly preposterous. It was proved at Raleigh’s trial that the design had been discussed

\* Hallam’s *Const. Hist.* i. 483.

between Cobham and Brooke, and that it was hinted to the lady herself; and Beaumont's despatches make it *perfectly certain that it was communicated to Aremberg*. Beaumont says, in the most pointed manner,\* that no man of sense who had seen the documents which he had examined, could doubt that the design had been proposed to that minister, and by him to the Archduke; and that there were letters in the possession of the King, which the *latter had shown to him*, not only proving these communications, but that a large sum of money had been promised to support the design therein developed.† Mr. Tytler appeals to a letter from Cecil to Sir Thomas Parry, then ambassador at Paris, in which he represents Cobham's intercourse with Aremberg as having been limited to the promotion of the peace; and that the money asked and promised was intended to gain friends to that measure. Had Mr. Tytler perused the despatches to which we have so often referred, he would not have rested much, we should think, on this paltry piece of state-craft. He would have there seen that the English ministry had been

\* Beaumont, *Dép.* 20th August.

† Ibid. *Dép.* 6th December, 1603.—This despatch is highly important.

obliged to submit to the meanness of recalling their former statements respecting Aremberg, in consequence of the representations of the Spanish ambassador; who, on his arrival, found that the reports of Aremberg's participation in Cobham's schemes, had excited a degree of indignation that threatened materially to obstruct the pending negotiations. James himself, pusillanimously yielding to this influence, and impelled by his pacific desires, had stooped so low as to try to exculpate Aremberg to Beaumont; even after having shown him intercepted letters from the former, of a criminal purport; and after again and again stating verbally, that he had intermeddled most improperly in Cobham's intrigues. The case thus forms an exception to what generally happens in such circumstances. In general, the representations of those in power respecting persons opposed to them, are liable to the suspicion of exaggeration or misstatement; but here, James and his ministers had found it necessary to extenuate Aremberg's guilt, from the peculiar position in which their wishes and policy had placed them. The obscurity in which the plot is involved is chiefly owing to this very cause—to a reluctance, generated by a timid and crouching sub-

mission to the desires of Spain, to divulge the whole truth respecting the conduct of her representatives.

All this, however, leaves the question as to Raleigh's actual participation in the plot undetermined. We have already mentioned that Beaumont had no doubt whatever of his guilt; and, considering that he founds his opinion not only upon verbal communications, but upon letters shown to him by the King, and upon corroborative memorials and documents transmitted to his own sovereign, it must be allowed, that he makes a demand upon our assent which it is difficult for any impartial mind to resist. But, notwithstanding the credit which is due to his testimony, we cannot, though greatly shaken, give up our own contrary convictions. The conduct ascribed to Raleigh is so improbable, and so utterly inconsistent with every act of his public life, and the prosecution of his favourite designs, that we feel ourselves constrained to resist the belief of his direct participation in any plot depending for success on Spanish agency; even when we place before our eyes, and in the clearest light, the proofs of his great discontent and suspicious intrigues; and give all due weight to the observation of Mr. Hallam, that he 'never showed a discretion bearing the least

‘proportion to his genius.’\* In the melancholy letter to his wife, written in the intention to destroy himself, all the overwhelming emotions of that dark hour could not prevent his mind from reflecting on the amazement it would occasion among some of his followers then abroad, to hear that he ‘was ‘accused of being Spanish!’ The ascendancy of such a feeling under such circumstances would have shaken our belief, supposing it had been different from what it ever has been on this part of the case.

But we fairly admit that a great part of history might be set aside, were such evidence as that furnished by Beaumont to be rejected. We do not, however, by any means entirely discard his authority. On the contrary, we go a great way along with him; for we are thoroughly convinced that Raleigh must have been aware of Cobham’s treason; and we think it likely that he may have indulged his own discontent, and encouraged the schemes of the other, by descanting on the means by which the new settlement might be disturbed, and their enemies humbled. It is impossible to peruse Beaumont’s despatches, and to consider their con-

\* *Const. Hist. of England*, i. 483.

tents in connexion with the facts disclosed in La Renzi's examination, and with the admissions made by Raleigh himself, without coming to this conclusion. The presumption of his entire ignorance of Cobham's intrigues, arising from his having voluntarily advised Cecil to question La Renzi—the proceeding which first instigated Cobham to accuse him—must be viewed as more than balanced by the contrary and stronger presumption founded on his secret warning to Cobham, in case he should be examined. Nothing urged at his trial made so strong an impression against him as this fact. ‘A privy councillor who was present did tell ‘me,’ says Bishop Goodman, ‘that if he had been ‘one of the jury, he would have found him guilty ‘only for the sending of that one note, for he did ‘not think that such a wise man as Raleigh would ‘have sent, at such a time, and upon such an ‘occasion, a note to Cobham, if there had not been ‘something amiss.’\* We must observe further, that his poignant feelings in recalling, in his letter to the King, the circumstance of his having ‘listened

\* *Memoirs*, i. 55. The same impression was produced upon the writer of a letter in Sir Toby Matthews's Collection, who also was present at the trial, (p. 282.)

'only' to Cobham, can hardly be ascribed to the mere offer of a pension from Spain. The facts disclosed in Beaumont's despatches, may enable us to form some judgment as to the degree in which the political morality of the day was likely to be shocked by such an offer. 'Four months have elapsed,' says this ambassador,\* 'since the pensions and presents which his Majesty determined to be stow here were resolved upon; and yet the execution has been delayed, to my disgrace and the prejudice of his Majesty's service. This is greatly to the advantage of the Spanish ambassador, who has both *authority and means to offer ten to one*, and knows how to profit by it!† Raleigh, it is true, refers only to the offer of a pension; but as he knew it could be proved that he was present when letters passed between Cobham and Aremberg; and as Beaumont's despatches make it quite certain that these letters contained treasonable matter; we are strongly inclined to ascribe his uneasy

\* *Dép.* 10th November 1603.

† There is a curious and pointed corroboration in Goodman's *Memoirs*. 'The Spaniard,' says he, 'was free of his coin, and spared no rewards for purchasing the peace. One told me that he himself had paid three thousand pounds to one man only for furthering the peace.'

emotions to his recollection of these facts. But, whatever there may be in this supposition, it would be a violation of all probable reasoning applicable to human conduct, to suppose that two persons so intimately connected as Raleigh and Cobham, could meet privately, when letters were received from and returned to the Flemish ambassador, without any communing taking place as to the object of so remarkable a correspondence. Viewing the facts detailed by Beaumont, it surely would be more rational to conclude that Raleigh was guilty—that is, a *direct* participator in the designs of Cobham and Brooke—than that he was wholly innocent; that is, wholly uninformed of the nature of the intercourse with Aremberg. To make out this, it must be shown that Cobham carefully concealed its nature from Raleigh, though constantly present, and, indeed, the only one whose presence was allowed when it was in progress—a conclusion palpably absurd.

Upon the supposition, then, that Raleigh, though not an actual or intended participator, was yet well aware of the nature of the correspondence—the most favourable conclusion for him that the facts will allow—what, it may be asked, could be his object in making himself privy to it, and thereby

so far committing himself? All that is known of his character leads to the conclusion that he had in view some ulterior design, by which that knowledge might be turned to account. The thought that the golden vision of El Dorado was again uppermost in his mind, and that his intention was to possess himself of the means of revisiting Guiana, has frequently occurred to us; but there was another course, which even Cobham's stolidity appears to have divined, and which more than one of his contemporaries believed to be that which he really intended to follow. Aubrey assures us, that he was informed by an intimate friend of the Lord Treasurer Southampton, that Raleigh's intention was to inveigle Cobham to Jersey, and then, having got both him and his Spanish treasure in his power, to make terms with the King;\* and Bishop Goodman expresses himself confidently to the same purport—averring that it was ‘his full intent to discover ‘the plot.’† It was said of Raleigh by one who knew him well, ‘that he desired to seem to be

\* *Lives*, iii. 516.—We do not place any great reliance upon Aubrey; but when he refers to respectable names to vouch a not improbable fact, his statements may be viewed as worthy of notice.

† *Memoirs*, i. 65.

'able to sway all men's fancies—all men's courses;'<sup>\*</sup> and perhaps it was this notion of his power to sway others, that entangled him in a net of his own spreading, and implicated him in treasons from which he flattered himself that his superior dexterity would keep him free.

Passing from these unsatisfactory discussions, we are now to attend to Raleigh's occupations in the Tower; and to see the activity and ardour, which had hitherto been exercised in court intrigues, warlike enterprises, and chimerical projects, transferred to pursuits wholly intellectual; and in which—such was the strength and versatility of his genius—he is allowed, by one of the severest judges of his conduct, to have 'surpassed the labours even 'of the most recluse and sedentary lives.'<sup>†</sup> The history of his captivity is identical with the history of his literary works; for the whole period of its endurance was employed in their composition; and they thus form memorials of a singularly interesting nature of this portion of his existence. Independently of the peculiar circumstances in which they

\* Earl of Northumberland's Letter, in Aiken's *Mem. of James*, i. 58.

† Hume.

were produced, it was to be expected that his biographers would fully and carefully examine and characterise them; and this the more, that some decidedly spurious pieces have been conjoined with his name, while the authenticity of others requires to be substantiated. But, strange to say, we have nothing of this sort; nor, if we except a few trivial remarks, anything critical, in the writings of his biographers. The fact, we verily believe, is unparalleled in the history of letters, that, numerous as are the lives of Raleigh, it is only in the antiquated one by Oldys, written above a century ago, that we find any methodical survey of his writings. That survey contains everything that industry could accumulate; but being destitute of critical spirit and general intelligence, it is of no value except as a bibliographical account of his different productions. A sketch of his ‘History of the World,’ with a few observations on his miscellaneous pieces, may, therefore, be acceptable to those who are unacquainted with his literary achievements.

It appears from the very remarkable preface to his ‘History,’ that, in selecting a subject for his pen, the history of his own country had first presented itself to his thoughts; and, considering the

course of his life, it was natural that it should be so: but the advice of some learned friends, joined with the notion that the ancient world would prove a safer field of inquiry, turned his labours in that direction. So vast a project as a universal history of antiquity, undertaken in such circumstances, betokens a consciousness of intellectual power which cannot but excite admiration. Viewed with reference to our vernacular literature, it constitutes an epoch in its historical department; for though Sir Thomas More—‘the father of English prose’\*—composed his fragment on the ‘History of Richard ‘the Third’ a century, and Knolles his ‘History ‘of the Turks’ a few years before the appearance of Raleigh’s work, it was indisputably the first extensive attempt of its kind in the English language.

Beginning with the Creation, it comprises the history of the first periods of the human race, and of the four great monarchies successively established under the Assyrians, the Persians, the Greeks, and the Romans; concluding with the second Macedonian war, when the latter were everywhere triumphant. In the distribution of its parts, there is no ob-

\* Sir James Mackintosh’s *Life of More*.

servance of any just proportion. Living at a period when the writings of the Fathers and their commentators furnished the prime objects of attention, and the chief repositories of information,—when to amass their opinions upon any given subject constituted the most approved erudition,—he treats at undue length, and invests with undue importance, whatever falls within the sphere of their favourite inquiries. Hence it is that he allows the history of the people of Israel to occupy the foreground throughout an unreasonable space. Hence too it is, that we find him seriously and earnestly inquiring whether Paradise was seated in a separate creation near the orb of the moon—whether the Tree of Life was the *Ficus Indicus*—whether the Ark was lighted by a carbuncle—whether the first matter was void of form; and discussing various similar questions, which, ludicrous as they may seem to us, then possessed an engrossing importance. It is only when he reaches the third of the five books into which the work is divided, and which embraces the period between the destruction of Jerusalem and the rise of Philip of Macedon, that he begins to lose sight of Judea, and to disentangle himself from the multitude of theological and scholastic digressions with

which the Jewish or scriptural portion is overlaid. That book in which all the more brilliant portions of Grecian story are surveyed, closes with the death of Epaminondas, whose great character is so finely pourtrayed, that we shall extract his delineation of it as a specimen of his style. ‘ So died Epaminondas, the worthiest man that ever was bred in that nation of Greece, and hardly to be matched in any age or country; for he equalled all others in the several virtues which in each of them were singular. His justice and sincerity, his temperance, wisdom, and high magnanimity, were noway inferior to his military virtues; in every part whereof he so excelled, that he could not but properly be called a wary, a valiant, a politic, a bountiful, and a provident captain. Neither was his private conversation unanswerable to those high parts which gave him praise abroad; for he was grave, and yet very affable and courteous; resolute in public business, but in his own particular, easy and of much mildness; a lover of his people,—bearing with men’s infirmities; witty and pleasant in speech,—far from insolence; master of his own affections, and furnished with all qualities that might win and keep love. To these graces were

'added great ability of body, and much eloquence,  
'and very deep knowledge in all parts of philo-  
'sophy and learning; wherewith his mind being  
'enlightened, rested not in the sweetness of con-  
'templation, but broke forth into such effects as  
'gave unto Thebes, which had ever been an under-  
'ling, a dreadful reputation among all people ad-  
'joining, and the highest command in Greece.'

The opening of the next book, in which, after glancing at the intestine divisions of the Greeks, he anticipates their subjection to Philip, is alike remarkable for its philosophical spirit and its poetical colouring. 'The Greeks grew even then more violent in devouring each other, when the fast-growing greatness of such a neighbour king as Philip should, in regard of their own safeties, have served them for a strong argument of union and concord. But the glory of their Persian victories, wherewith they were pampered and made proud, taught them to neglect all nations but themselves; and the rather to value at little the power and purposes of the Macedonians, because those kings and states which sate nearer them than they did, had in the time of Amyntas, the father of Philip, so much weakened them, and won upon them,

'that they were not in any one age (as the Greeks persuaded themselves) likely to recover their own; much less to work any wonders against their borderers. And, indeed, it was not in their philosophy to consider that all great alterations are, storm-like, sudden and violent; and that it is then overlate to repair the decayed and broken banks when great rivers are once swollen, fast running, and enraged. No; the Greeks did rather employ themselves in breaking down those defences which stood between them and this inundation, than seek to rampire and reinforce their own fields; which, by the level of reason, they might have found to have lain under it.' But this passage is far surpassed by that with which he closes his last book; where, looking back to the fallen monarchies whose history he had traced, and forward to the termination of that of Rome, he thus grandly sketches the outline of the historical picture which that far-stretching view presented to his capacious and poetical mind. 'By this which we have already set down, is seen the beginning and end of the three first monarchies of the world; whereof the founders and erectors thought that they never would have ended. That of Rome, which made

'the fourth, was also at this time almost at the  
'highest. We have left it flourishing in the middle  
'of the field, having rooted up or cut down all  
'that kept it from the eyes and admiration of the  
'world. But, after some continuance, it shall begin  
'to lose the beauty it had; the storms of ambition  
'shall beat her great boughs and branches one  
'against another; her leaves shall fall off; her  
'limbs wither; and a rabble of barbarous nations  
'enter the field and cut her down.'

The foregoing observations and extracts may serve to furnish a general conception of the structure of this great work. Descending to a more particular survey, we shall find one of its most conspicuous features in those digressions, to the multiplicity of which we have already alluded. They occur more frequently in its earlier and more scholastic half; but the classical portion is not by any means free from them; of which we have one amongst sundry instances, where this distinguished soldier steps aside to discuss the origin and history, and to reprobate the practice of duelling. Viewed with reference to the laws of historical composition, they constitute a blemish; but it is in them that the richness and beauty of the author's imagi-

nation, and the originality of his thoughts, are most conspicuous. His tendency to digression manifests itself not only in distinct sections and formal essays, but in a multitude of episodical observations and deductions. In one or the other, we meet with many fine reflections upon the infelicities and vanities of life—a topic which always calls forth strains of a singularly pathetic cast—upon death, another favourite topic—upon the attributes of the Deity—and upon the human soul, and the great powers and virtues with which it is endowed. In one or the other, too, are scattered some striking proofs of his emancipation from the fetters of the schools, and of a near approach, both in respect of metaphysical and ethical science, to the soundest principles of modern philosophy. One of the greatest and most candid of our philosophers has himself acknowledged, that a curious anticipation by Raleigh, of his doctrine of the ‘fundamental laws of human belief, had been pointed out to him;’ observing, ‘that the coincidence between them in point of *expression*, though curious, is much less wonderful than the coincidence of the *thought* with the soundest logical conclusions of the eighteenth century.’\* This is an honourable tes-

\* Stewart’s *Philosophy of the Mind*, ii. 598.

timony to a remarkable fact; and the mention of it recalls what appears to be an anticipation of one of the most startling conclusions of Malthus:—‘The multitude of people,’ says Raleigh, ‘is such, that if ‘by wars or pestilence they were not sometimes ‘taken off by many thousands, the earth, *with all  
the industry of man, could not give them food.*’\*

But it is to the Greek and Roman story that we would direct the attention of any one wishing to acquaint himself with Raleigh’s peculiar merits. The narrative is clear, spirited, and unembarrassed; replete with remarks disclosing the mind of the soldier and the statesman; and largely sprinkled and adorned with original, forcible, and graphic expressions. But this portion of the work has a still more remarkable distinction, when considered as the production of an age not yet formed to any high notions of international morality, from its invariable reprehension of wars of ambition, and its entire freedom from those illusions which have biassed both historians and their readers in regard to the perfidies and cruelties exhibited in ancient, particularly Roman history. In this respect, he appears to us to stand honourably distinguished from —

\* *Hist. World*, B. I. chap. viii. § 4.

all preceding authors; but while he thus endeavours to moderate our admiration of the Romans by awakening us to a strong perception of their national crimes, he never fails to do justice to their manly virtues, their energy of character, and their public affections. This moral and judicial mode of viewing the achievements of the classical nations, and the providential lessons held out by history, joined with a mournful tone of reflection on the instability of fortune, the miseries of humanity, and the ultimate fate of all in death, combine to give the work a character of individuality of the most marked description, and which separates it from all others of the class to which it belongs. Of its style, the fine passages above extracted will partly furnish the means of judging; but it would be necessary to peruse some considerable portion of the narrative on Grecian and Roman affairs, to have any just conception of its easy and equable flow—its clearness and animation—its sweetness and melody in the plaintive parts, and its general strength and dignity. In the structure of his periods, there was no writer of his day so free from stiffness and pedantry. Against Hume's opinion, that he is the 'best model

'of our ancient style,' there is only, in as far as we know, one dissentient voice. It is stated in Spence's *Anecdotes*, that in talking 'over the design for a Dictionary, Pope rejected Sir Walter Raleigh twice as too affected.' But there must be some mistake or misconception in this. We cannot imagine that such an opinion proceeded from Pope. His animated call for the revival of such 'words 'as wise Bacon and brave Raleigh spoke,' will be recollected by every one; and Mr. Hallam only echoes the general sentiment of the learned, when he says, that Raleigh 'is less pedantic than most 'of his contemporaries, seldom low, and never affected.'<sup>\*</sup>

But what is to be said of the noted discovery, that this memorable work was only in part the legitimate produce of Raleigh's mind? Mr. D'Israeli has, in his 'Curiosities of Literature,' favoured the world with what he calls its secret history; in which he endeavours to show that its materials were contributed by several hands; 'the eloquent, the grand, and the pathetic passages interspersed' being alone his composition! This piece of 'secret history'—alike incredible and pre-

\* *Hist. of Lit.* iii. 658.

posterous—was well rebutted by Mr. Tytler; but it has more recently been examined, and with signal chastisement given to the winds, in a small publication, little known we believe, though one of the most learned and acute contributions to literary history that has appeared in our day.\*

We must observe, however, that Mr. D'Israeli is not the only impugner of Raleigh's claims to his own workmanship; for, independently of Ben Jonson's assertion, 'that the best wits of England assisted in making his History,' we find that another eminent writer had previously made a similar allegation. We allude to Algernon Sydney, who, in order to disparage Raleigh's authority as a political writer, broadly asserts '*that he was so well assisted in his History of the World,* that an ordinary man, with the same helps, might have performed the same thing.'† Passing by the absurdity of the opinion combined with this allegation—an opinion so absurd as greatly to discredit the author's testimony—we may observe, that the existence of such a rumour as seems to be implied in it, is, in all probability, to be ascribed to the

\* 'Curiosities of Literature, by J. D'Israeli, Esq. Illustrated.' By Bolton Corney, Esq.

† *Sydney on Government*, p. 398.

wonder occasioned by the production, in a state of separation from the world, of a work of such extent and erudition; and to the circumstance, that in such a condition of restraint, some literary assistance must necessarily be required. That assistance of that description might be rendered by Raleigh's friends, yet without giving them any claims to authorship, or subtracting from the exclusiveness of his own, is too evident to require illustration. But the supposition that Raleigh's share of the work was limited to such interspersions as Mr. D'Israeli figures, is utterly incapable of proof, and in fact inconceivable; and its absurdity and falsity may be demonstrated *a priori*, independently of that detailed refutation of his pretended authorities which is contained in the searching publication to which we have referred.

In the first place, we hold it to be demonstrable by a critical examination of the work itself, that it is throughout the composition of a single mind; bearing the impress of a unity and identity of literary labour which could only exist in the workmanship of one and the same hand. By no analyses of its structure, sequences, and wording, could it possibly be shown that it exhibits any differences

of composition, justifying the ascription of passages of one sort to Raleigh, and of the rest to others. If, therefore, he received any of his materials from others, they must have been so amalgamated and harmonized by the intellectual processes to which he subjected them, as to make them his own, just as much as the information he derived from the printed authorities he consulted. Thus, if Jonson gave him, as he boasted to Drummond of Hawthornden, a piece on the Punic War, he must have made the same use of it that he did of the narratives of Livy and Polybius.

In the second place, let it be remembered that the ‘History of the World’ was published, with his name, by a man in adversity—a state prisoner—hated by the Government—disliked by many—and who, three years after it saw the light, perished on the scaffold; and let it then be asked, whether any man so situated was likely to assume to himself the exclusive glory of an authorship to which he was only partially entitled? or whether, supposing him bold and shameless enough to make the venture, the plagiarism would not have soon transpired, and been greedily seized upon to blacken his character, and to swell the list of his impostures, at a

time when the sovereign himself found it necessary to try, by such means, to lessen the indignation excited by his unwarrantable execution. Taking the case in either view, we think it impossible for any impartial mind to doubt that the '*History of the World*' was wholly the composition of its reputed author; and, therefore, when we find Dr. Lingard and Dr. Southey limiting his share of it, but without a syllable of argument or proof, to what is capriciously meted out to him by Mr. D'Israeli, we are constrained to think that they have done so upon very slender authority, and without any adequate acquaintance with the work itself, or consideration of the circumstances in which it appeared.

Of Raleigh's other literary productions, none but the account of Sir Richard Grenville's immortal action at the Azores, that of his own voyage to Guiana, and some poems, were printed during his life. Most of those attributed to him were published not merely after, but long after his death. We are, in consequence, left in great uncertainty as to the genuineness of several that bear his name; and even with respect to those of which he was indubitably the author, we have no information as to whether they were printed just as they

came from his pen, or were in any respect altered. Four of them were published under the sanction of his grandson; namely, his ‘Discourse on the Invention of Shipping,’ his ‘Relation of the Action at Cadiz,’ his ‘Dialogue between a Jesuit and a Recusant,’ and the ‘Apology for his Last Voyage to Guiana.’ Of his political treatises,—‘The Cabinet Council,’ and ‘Maxims of State,’—had the honour of being given to the world by Milton. In an advertisement to the former, the illustrious editor states, that ‘it was given to him for a true copy, by a learned man at his death;’ and he gives it as his opinion, that ‘it was answerable in style to the works of the eminent author already extant, as far as the subject would permit.’ We have a similar statement by Dr. Moore, Bishop of Ely, respecting another piece ascribed to him, entitled an ‘Introduction to a Breviary of the History of England, with the Reign of William the First;’ which was published by that learned Prelate. ‘Whoever has been conversant,’ says he, ‘in the works of that accomplished knight, and acquainted with his great genius and spirit, and his manly and unaffected style, will make no doubt but what is now presented to the world was his genuine

'issue.' We have here a remarkable instance of the uncertainty of judging of authorship by inferences from style merely; for we have ascertained, by a careful comparison, that this tract, instead of being the 'genuine issue' of Raleigh, is almost wholly copied from a 'History of England' by Samuel Daniel, published in 1618. Daniel was an excellent writer, and in some qualities of style, particularly ease and clearness, bore a resemblance to Raleigh, by which the Bishop seems to have been misled. Besides those published by Milton, there are several other political pieces ascribed to Raleigh, and perhaps with even better claims to the credit of his name. Of these the most noted is the 'Dialogue on the Prerogatives of Parliament.' This has been more frequently referred to than any of his political productions; a distinction which it owes to the support it has been supposed to afford to the favourers of monarchical power, and the high prerogatives claimed for the Stuarts. It has thus been appealed to as an authority both by Filmer and Hume. Mr. Hallam observes that its 'dedication to King James contains terrible things; but that we must not suppose 'Raleigh meant what he said.'\* In this we fully

\* *Constit. Hist. of England*, i. 377.

concur; for though Raleigh, in his History, doubtless with a view to propitiate an unrelenting master, sometimes gives a broad, sometimes a qualified support to the doctrine of the divine authority and irresponsibility of kings, he yet more frequently holds a language respecting the ends of government, the duties of sovereigns, and the means necessary to rule happily as well as gloriously, that might recommend him to the disciples of Fénelon rather than to those of Filmer. His real views are clearly enough manifested in the Dialogue referred to; which strongly inculcates the doctrine, that the happiness of the people is the great end of government; their good-will its best support; and that those kings who governed by parliaments reigned more prosperously and successfully than those who wished to rule without, or in despite of them. But however disposed Raleigh may have been to set limits to the exercise of regal power, he has nowhere shown the least love of republicanism; nor has he ever spoken of liberty with enthusiasm. So far was he from cherishing the doctrine of equality in political rights, that he held there were multitudes 'whose disability to 'govern themselves proved them to be naturally

' slaves.' He accordingly viewed with an unfavourable eye the abolition of rural servitude or villanage; ascribing to it social evils of considerable magnitude. ' Since our slaves were made free, which ' were of great use and service, there are grown ' up,' he says, ' a rabble of rogues, cut-purses, and ' other the like trades—slaves in nature, though ' not in law.\* He seems always to have evinced a total want of sympathy with, if not a dislike of, the lower orders; and all authority vested in them was abhorrent alike to his feelings and to his reason. His general sentiments on this head may be collected from a remark in his History, when, speaking with reference to the people, he says, ' there ' is nothing in any state so terrible as a powerful ' and authorized ignorance.'

The versatility of Raleigh's genius and pursuits were strikingly exemplified in his acquaintance with the mechanical arts, and his addiction to experimental inquiries. His discourses on shipbuilding, the navy, and naval tactics, are, we believe, the earliest productions of the kind in the English language. We never have been able to account for his great knowledge of seamanship, in which

\* *Hist. of the World*, B. V. c. ii. § 4.

he had but little practical training, nor had he made many considerable voyages. His favour at court, his captures at sea, and his brilliant courage, procured him the rank of admiral, and employment as such on several important occasions; for naval rank was not yet regulated by any fixed rules of promotion; but, in point of fact, he rose to a reputation as a seaman not surpassed by any man of his day. After Drake and Hawkins disappeared from the scene, he seems, indeed, to have enjoyed a preeminence over all his contemporaries. Strong native predilections, and a wonderfully versatile mind, can alone explain his extraordinary proficiency in maritime affairs. His tracts on ship-building have often been referred to as evincing great practical knowledge; but the most extensive, and probably the most instructive, of his treatises on naval subjects, has unfortunately disappeared. We refer to a discourse on ‘the Art of War by Sea;’—‘a subject,’ he observes, ‘never handled by any man, ancient or modern.’\* This, we believe, was true at the time. It was written for the information of his much-loved patron, Henry Prince of Wales; but, says he, ‘God hath spared

\* *History of the World*, B. V. c. i. § 6.

'me the labour of finishing it, by his loss; by the  
'loss of that brave prince, of which, like an eclipse  
'of the sun, we shall find the effects hereafter.'

That a considerable portion of it was written seems certain; and we would fain hope may yet be discovered. Mr. Tytler has printed an outline of its contents, from a manuscript preserved in the British Museum, from which it appears that it was not limited to the subject of tactics, but included a wide range of topics connected with naval affairs. The vast importance of the navy to a maritime and insular country like Britain, is a favourite subject with Raleigh, who, in his History, seizes every opportunity of digressing upon it; particularly with the view of showing, that to her navy alone can Britain trust for protection from invasion; and that a powerful navy is consequently indispensable, not merely as an instrument of national glory, but of national independence.

That strong taste for experimental inquiry, which manifested itself so signally at the close of the sixteenth and beginning of the seventeenth century, and imparted a death-blow to the scholastic philosophy, found in Raleigh one of those inquisitive and ardent minds, sure to be roused to active re-

search by the discovery of any new avenue to knowledge. He, like many other ingenious men, had already begun to make some empirical attempts in that field which the exhortations and the precepts of Bacon were soon to lead numerous votaries to cultivate with more rational prospects of success. During his confinement in the Tower, he appears to have devoted a considerable portion of his time to chemical and pharmaceutical investigations; greatly, no doubt, to the amazement of those about him, who marvelled to behold the splendid courtier and captain of a happier day, earnestly employing himself with chemical stills and crucibles. He has converted, says Sir William Wade, the lieutenant of the Tower, in a letter to Cecil, 'a little hen-house in the garden into' a still-house; and here 'he doth spend his time all the day in distillations.' This was written in 1605, probably before Raleigh had entered seriously upon the composition of his History, which must have engrossed the better part of his time; but he appears to have continued his experimental researches—as a recreation it may be—throughout the whole period of his confinement. We learn from the '*Diary*' of the Reverend John Ward, that he had met in 1661 with a

very old chemist, named Mr. Sampson, ‘ who was operator to Sir Walter Raleigh twelve years, whilst he was in the Tower, and who told him many things of Sir Walter.’ What things the old chemist actually recounted, this provoking diarist does not reveal; but as his recitals are generally unworthy of attention, we the less regret his silence as to Raleigh. Some references to his experimental pursuits are made by other writers of the time, particularly Bishop Hall, who mentions them as among the happy results of his separation from the busy world. But, in point of fact, they were of no practical utility,—a conclusion nowise invalidated by his composition of a ‘ cordial,’ so famous in his own day as to be administered to the Queen and the Prince of Wales, when dangerously ill, and which long continued in great repute. Evelyn states in his ‘ Diary,’ that in 1662, he ‘ accompanied King Charles the Second to Monsieur Febure, his chemist, to see his accurate preparation of Sir Walter Raleigh’s cordial;’ and an elaborate discourse upon it was, by command of his Majesty, written by this chemist, who extols it as a signal example of the great advantages which modern pharmacy had reaped from chemical science.\*

\* *Discours sur le Grand Cordial de Sir W. Raleigh.* Par. N. Le Febure. 12mo. 1665.

Of the poetry coupled with Raleigh's name, there is much of the authenticity of which we have no certainty. His fine imagination has left its impress on the pages of his 'History,' no less than on its more appropriate ground, the productions of his 'sweetly tempered muse';\* but its exercise in poetical composition was chiefly, though not entirely, limited to the early part of his life. His reputation, according to Puttenham, was then high in 'ditty and amorous odes;' but, from an allusion in one of Spenser's sonnets, and some verses of his own, he appears to have meditated the invocation of a loftier muse—

'The famous acts of worthy Brute to write'—  
a design, from the execution of which, if ever seriously entertained, the struggles and turmoils of his ambitious career effectually withdrew him. With his charming answer to Marlowe's 'Invitation to Love,' and the magnificent sonnet on the 'Fairy Queen,' all readers of English poetry must be acquainted. 'Milton,' says Sir Egerton Brydges, 'had deeply studied this sonnet, for in his compositions of the same class, he has evidently more

\* 'Full sweetly tempered is that muse of his.' Spenser's *Colin Clout*.

'than once its very rhythm and construction, as well as cast of thought.' To this warm but tasteful admirer of Raleigh's poems, we are indebted for a collected edition of them;\* but he does not appear to have instituted any searching inquiries for the purpose of verifying them; and there are several in the collection, respecting the authenticity of which we are thus left in disagreeable uncertainty.

We cannot leave the subject of Raleigh's writings without briefly noticing that edition of them—the first aspiring to be complete—which the Directors of the Clarendon Press have given to the world. It was to Oxford that the public was best entitled to look for such an undertaking; and we heartily wish that the monument she has erected to the memory of her renowned son had been more worthy of his name and her resources.

Long previous to this edition, namely in 1751, Dr. Birch published a collection of Raleigh's miscellaneous pieces, with an account of his life. Neither as biographer nor editor, can anything be said in his praise. Of the life we have already spoken; of

\* Poems of Sir Walter Raleigh, now first collected; with a biographical and critical Introduction. 12mo. 1814.

his editorial judgment and care the collection furnishes no traces. He says nothing of the texts used in his reprint, omits printed pieces of unquestionable authenticity, inserts others which are spurious, and is silent as to the objects, character, and literary history of the whole. We are sorry to say that his Oxford successors have not, in any very material degree, surpassed him in the miscellaneous portion of their edition. It is indeed augmented with the pieces omitted by him, and with one or two others not before printed, but it is equally wanting in critical inquiry and literary illustration, and liable to the same censure of blending what is spurious with what is genuine. Here, accordingly, we find the tract copied from the historical work of Samuel Daniel; and here also appears a discourse on 'Trade and Commerce with the Hollander and other Nations,' incorrectly ascribed to Raleigh; the real author being, in all probability, an alderman of London, of the name of Cockaigne.\* Mr. Tytler has expressed some surprise at their omission of Raleigh's 'Journal of his Second Voyage to Guiana,' which exists in his handwriting in the British Museum. This omission is not, how-

\* See Smith's *Memoirs of Wool*, i. 144.

ever, at all censurable; for that journal is so full of chasms, as to be quite unfit for publication. But there does exist another piece on Guiana by Raleigh, with which Mr. Tytler was evidently unacquainted; and which, being entire, and extremely curious, ought unquestionably to have been included in the Oxford edition. It is entitled ‘Considerations on ‘the Voyage to Guiana,’ and is preserved amongst the manuscripts of Sir Hans Sloane.\* This singular production—for the authenticity of which we have the strongest internal evidence—appears to have been written soon after the publication of his celebrated voyage, and to have been intended to remove objections to his plans, and to show that an alliance, highly beneficial to England, might be easily effected with the sovereign of El Dorado. In one respect, Raleigh’s Oxford editors deserve commendation,—namely, in returning to the text of the original edition of the ‘History of the World,’ instead of reprinting the edition of Oldys, commonly, but very erroneously, considered the best. We do not pretend to have perused the work in their edition, and cannot therefore say anything as to its correctness; but we observe that they have

\* Bibl. Sloan. 1223. Plut. xxi. D.

noticed several discrepancies between the first and the subsequent editions; and it cannot for a moment be questioned that they have exercised a sound discretion in adopting it in their reprint. But notwithstanding this recommendation, we have said enough to show that this edition is far from creditable to the Clarendon Press; and if its Directors cannot achieve more, it is to be wished that they would separate the ‘History of the World’ from its ill-edited accompaniments, and reproduce it by itself in a more worthy form.

Bishop Hall has ascribed to Raleigh’s long imprisonment, which ended in March 1615, some results which the subsequent events of his life do not bear out. ‘The Court,’ says he, ‘had his ‘youthful and freer years; the Tower his latter ‘age. The Tower reformed the courtier in him, ‘and produced those worthy monuments of art and ‘industry which we should have in vain expected ‘from his freedom and jollity.’ Had his life ended with the production of these ‘worthy monuments,’ it might indeed have been supposed that seclusion from the world had ‘reformed the courtier,’ and that those plaintive reflections on the vanities of life, with which his History is so richly strewn, were

really the outpourings of an awakened conscience, and evidences of a great change in the moral habits of the man. But he lived to furnish a humiliating proof of the lamentable inconsistencies of human nature, even in the strongest minds; to show that the same man may, in the closet, reason like a sage on cupidity and ambition, and in active life pursue with eagerness the commonest objects of desire; may declaim against gold as ‘the high and shining idol’ with which the great enemy of mankind lures them on to destruction, and yet sacrifice character and life in its pursuit; may smile upon death in its most revolting form, and yet try to escape from it by the most degrading artifices!

It was neither owing to any feeling of clemency, nor to any merciful sense of the sufficiency of the punishment already inflicted, that King James was induced to consent to Raleigh’s liberation. It may have been owing in part to an expectation of reaping some benefit from Raleigh’s mining speculation, but more immediately and certainly to bribery—the grand expedient, in that most venal age, for smoothing the road to royal favour. Applications for his release had been made by the Queen, by her brother the King of Denmark, and by the Prince

of Wales, but without success, and even without procuring any material relaxation of the strictness of his confinement; for in a letter to the Queen, written in the eighth year of his captivity, we find him complaining that he was as ‘closely locked up as at the first day.’ But the death of Cecil, and the disgrace of Somerset, who had been enriched by the gift of his estate, removed some formidable obstacles; and having succeeded in inducing the new Secretary of State, Sir Ralph Winwood, to recommend his project—not of searching for El Dorado, for he seems to have abandoned that design—but of opening a mine in Guiana, ‘as a matter not ‘in the air, or speculative, but real;’ and having, moreover, presented the uncles of the new favourite Buckingham with the sum of fifteen hundred pounds, on condition of their procuring his intercession with the King, the long-closed gates of the Tower were at last opened for his exit. It was many years afterwards stated by his son, that another equal bribe would have insured a full pardon; but that, having consulted Lord Bacon as to whether the commission empowering him to proceed to Guiana did not imply one, and having received an opinion in the affirmative, he dismissed from his thoughts all idea of

making such a sacrifice. That such an opinion was given by Bacon, seems as improbable as it is that James would have acceded to the solicitation. He has himself stated that he had resolved to withhold a pardon, in order the more effectually to hold Raleigh in subjection;\* and, as the statement is in accordance with his known cunning and timidity, we cannot doubt that it was true. It would have been well, however, for his character, as the sequel showed, had his king-craft on this occasion permitted him to assume the appearance, at least, of clemency, by giving his prisoner a pardon when he consented to set him free.

If we are to believe Raleigh himself, it was mainly to obtain the power of revisiting Guiana that liberty was coveted by him. That envied region had never ceased to engage his thoughts. Even when 'reasoning high' on the all-corrupting influence of gold, his heart was fixed upon its imaginary mines. The composition of his History did not in the least divert his attention from them. He maintained a constant correspondence with that country, and appears to have made frequent applications to the government to accede to proposals for

\* Declaration, published after Raleigh's execution.

verifying his accounts of its wealth. Something like an agreement appears to have, at one time, been nearly brought about, for enabling Captain Keymis to proceed thither, in order to import as much gold ore as should satisfy the King that they were in the knowledge of a mine in its interior. We have before us a copy of a curious document, of the date of 1611, preserved among the Harleian manuscripts, and which contains the substance of an agreement between Raleigh and the government, to the above effect.\* The following is its principal condition :—‘ If Keymis, after being guarded to the ‘ place, shall fail to bring to England half a ton, or ‘ as much more as he shall be able to take up, of ‘ that slate gold ore whereof *I have given a sample*, ‘ then all the charge of the journey shall be laid ‘ upon me—*by me to be satisfied*: but should half ‘ a ton be brought home, I am to have my liberty; ‘ and in the meantime, my pardon under the Great ‘ Seal is to be lodged in his Majesty’s hands till the ‘ end of the journey.’ With the publication of this paper, which now appears for the first time, the

\* Brit. Mus. Harl. MSS. 39, p. 340. This document is in the form of a letter, but is entitled, ‘ Agreement between Sir Walter Raleigh and the Lords for the Journey to Guiana, to be performed by Captain Keymis in 1611.’

disputed question as to Raleigh's belief in the existence of gold mines in Guiana, must be viewed as ended. Here we see him so confident in that belief as to take upon himself a risk which, in the event of failure, would occasion the ruin of himself and his family. Why this agreement was not farther proceeded in, does not appear. It was to its abandonment, in all probability, that Raleigh alluded in the following extract from a letter to the Queen, by whom he had always been befriended, written in the ninth year of his imprisonment. 'I did lately  
' presume to send unto your Majesty the copy of  
' a letter\* to my Lord Treasurer touching Guiana.  
' That there is nothing done therein I could not but  
' wonder with the world, did not the malice of the  
' world exceed the wisdom thereof.'† It is painful  
to observe his palpable insincerity when, in the  
sequel, he disclaims all personal interest in the  
matter; calling the 'everliving God to witness'  
that he is actuated solely by the desire to 'approve  
' his faith to his Majesty, and to do him a service  
' such as hath seldom been performed for any king.'  
Yet was Guiana so constant an object of his thoughts

\* The agreement was in the form of a letter.

† This letter, of which we long ago procured a copy from  
the State Paper Office, has been printed, with some other

Of the poetry coupled with Raleigh's name, there is much of the authenticity of which we have no certainty. His fine imagination has left its impress on the pages of his 'History,' no less than on its more appropriate ground, the productions of his 'sweetly tempered muse;'<sup>\*</sup> but its exercise in poetical composition was chiefly, though not entirely, limited to the early part of his life. His reputation, according to Puttenham, was then high in 'ditty and amorous odes;' but, from an allusion in one of Spenser's sonnets, and some verses of his own, he appears to have meditated the invocation of a loftier muse—

'The famous acts of worthy Brute to write'—  
a design, from the execution of which, if ever seriously entertained, the struggles and turmoils of his ambitious career effectually withdrew him. With his charming answer to Marlowe's 'Invitation to Love,' and the magnificent sonnet on the 'Fairy Queen,' all readers of English poetry must be acquainted. 'Milton,' says Sir Egerton Brydges, 'had deeply studied this sonnet, for in his compositions of the same class, he has evidently more

\* 'Full sweetly tempered is that muse of his.' Spenser's *Colin Clout*.

'than once its very rhythm and construction, as well as cast of thought.' To this warm but taste-  
ful admirer of Raleigh's poems, we are indebted for a collected edition of them;\* but he does not appear to have instituted any searching inquiries for the purpose of verifying them; and there are several in the collection, respecting the authenticity of which we are thus left in disagreeable uncertainty.

We cannot leave the subject of Raleigh's writings without briefly noticing that edition of them—the first aspiring to be complete—which the Directors of the Clarendon Press have given to the world. It was to Oxford that the public was best entitled to look for such an undertaking; and we heartily wish that the monument she has erected to the memory of her renowned son had been more worthy of his name and her resources.

Long previous to this edition, namely in 1751, Dr. Birch published a collection of Raleigh's miscellaneous pieces, with an account of his life. Neither as biographer nor editor, can anything be said in his praise. Of the life we have already spoken; of

\* Poems of Sir Walter Raleigh, now first collected; with a biographical and critical Introduction. 12mo. 1814.

viewed the ‘Spanish Indies’ as a fair field of booty, it seems astonishing that James’s ministers should have allowed him to sail with a fleet of such magnitude. His repeated asseveration of pacific intentions, and that his being so strongly armed was for defence only, joined perhaps with the recollection of some former breaches of the national faith of Spain to British subjects trading to America, seem to have shut their eyes to the consequences but too likely to ensue. Their easy faith was, however, far more surprising than the credulity of those who became sharers in the adventure. Raleigh’s reputation, always great in naval affairs, had been raised to a high pitch by the publication of his History.\* The belief that he was sincere, and that he could not be deceived either as to the existence of the mine, or the advantages of Guiana as a place of settlement, might not unreasonably be entertained by many; particularly as it was known that he was to embark in the undertaking his whole remaining fortune, as well as that of his wife. It does not therefore seem surprising that it should have attracted many eager associates, all in imagination grasping golden returns, while some might expect

\* *Carte, iv. 49.*

to possess themselves of the means of a profitable commerce.

With whatever hopes or views brought together, a fleet consisting of no less than thirteen vessels was in a few months collected. Some of them were of considerable size, and all carried a proportionable number of cannon. The assembling of such a fleet, under so renowned a commander, and for purposes so uncommon, could not fail to excite curiosity; and we have one proof of its having done so, in the fact that it was visited by all the ambassadors resident at the British Court. Raleigh's own ship, 'The Destiny,' had been built under his special directions, and in a particular manner engaged the attention of the foreign ministers. But there are some circumstances connected with the visits of the French ambassador, deeply affecting Raleigh's honour, as to which none of his biographers appear to have had any information. After his recommitment to the Tower, on his return from this unhappy voyage, he is said to have averred, that though the French ambassador had visited his ship, previous to his sailing, he had done so like the rest, only once, and merely from curiosity; and that nothing of any moment passed between

them.\* Unfortunately for Raleigh's veracity, as well as loyalty, the despatches of this ambassador, Count Desmarests, tell a very different tale. We have before us copies, taken from the originals in the French Archives, of four despatches written by him to his Government, from which it appears that he had visited the ship, not once merely, but several times. But this is not all. He describes Raleigh as in the highest degree discontented; as representing himself to have been unjustly imprisoned and stripped of his estate—in a word, most tyrannically used; and as having *resolved to abandon his country, and to make the King of France the first offer of his services and acquisitions, if his enterprise, from which he confidently expected great results, should succeed.*† The ambassador does not appear to have anticipated much from it; but he

\* This averment, to which Mr. Tytler gives full credit, was made to Sir Thomas Wilson,—a sort of spy employed by the Government. A very curious record of their conversations, kept by this person, is preserved in the State-Paper Office, under the title of 'A relation of what hath passed and been observed by me since my coming to Sir Walter Raleigh.' Extracts from this paper have been printed both by Mr. Jardine and Mr. Tytler, to which we are indebted for all that we know of its contents.

† These despatches bear the dates of 12th January, 17th and 30th March, and 24th April, 1617. The words in italics are translated from the last despatch.

made a courteous reply—assuring Raleigh of a favourable reception from his master, and encouraging him to place himself at his disposal. That Count Desmarests attributed to Raleigh no sentiments respecting King James which he did not really express, needs not be doubted; yet we find him afterwards representing this alleged oppressor as an impersonation of goodness, and vowing that it was his dearest wish ‘to die for him’—nay, ‘to ‘be torn in pieces in his service!’ And when we recollect his having, in his letter to the Queen, taken God to witness, that in prosecuting his Guianian project, his main wish was to ‘approve ‘his faith to his Majesty, and to do him a service ‘such as hath seldom been performed for any King,’ and find him afterwards proposing to transfer to the King of France all the beneficial results of that very project, it seems impossible to arrive at any conclusion by which to relieve his character from heavy blame. On the supposition that his only object in making such a tender of his services was to bespeak favour with France, in the event of his being obliged, by failure or otherwise, to seek refuge abroad—which we are inclined to think was the case—even this mitigated view of his con-

of Wales, but without success, and even without procuring any material relaxation of the strictness of his confinement; for in a letter to the Queen, written in the eighth year of his captivity, we find him complaining that he was as ‘closely locked up as at the first day.’ But the death of Cecil, and the disgrace of Somerset, who had been enriched by the gift of his estate, removed some formidable obstacles; and having succeeded in inducing the new Secretary of State, Sir Ralph Winwood, to recommend his project—not of searching for El Dorado, for he seems to have abandoned that design—but of opening a mine in Guiana, ‘as a matter not ‘in the air, or speculative, but real;’ and having, moreover, presented the uncles of the new favourite Buckingham with the sum of fifteen hundred pounds, on condition of their procuring his intercession with the King, ‘the long-closed gates of the Tower were at last opened for his exit. It was many years afterwards stated by his son, that another equal bribe would have insured a full pardon; but that, having consulted Lord Bacon as to whether the commission empowering him to proceed to Guiana did not imply one, and having received an opinion in the affirmative, he dismissed from his thoughts all idea of

making such a sacrifice. That such an opinion was given by Bacon, seems as improbable as it is that James would have acceded to the solicitation. He has himself stated that he had resolved to withhold a pardon, in order the more effectually to hold Raleigh in subjection;\* and, as the statement is in accordance with his known cunning and timidity, we cannot doubt that it was true. It would have been well, however, for his character, as the sequel showed, had his king-craft on this occasion permitted him to assume the appearance, at least, of clemency, by giving his prisoner a pardon when he consented to set him free.

If we are to believe Raleigh himself, it was mainly to obtain the power of revisiting Guiana that liberty was coveted by him. That envied region had never ceased to engage his thoughts. Even when 'reasoning high' on the all-corrupting influence of gold, his heart was fixed upon its imaginary mines. The composition of his History did not in the least divert his attention from them. He maintained a constant correspondence with that country, and appears to have made frequent applications to the government to accede to proposals for

\* Declaration, published after Raleigh's execution.

in this vain pursuit they spent about twenty days, during which they were frequently fired upon from the woods, and suffered considerable loss. Keymis at last thought proper to desist from the search, and fell back upon St. Thomas; whence the whole body returned to Trinidad, where their disappointed and unhappy commander, still unwell, was lying at anchor.

It appears from the narrative of Father Simon, that the English made anxious inquiries amongst their prisoners respecting the gold mines in the neighbourhood;\* but he does not expressly say that it was for the purpose of opening mines that they ascended the Orinocco. The time employed in sounding it at various points, joined with their apparent anxiety to conciliate the natives, and to excite them to resistance against the Spaniards, led to the belief that their main purpose was to colonize in that neighbourhood.† That colonization formed a principal part of Raleigh's plans, there can be no doubt; and the reception he experienced from the natives satisfied him that they would lend a cordial support to his schemes. He lived so much in their remembrance, that he found,

\* Simon, pp. 643, 662.

† Ibid. p. 656.

as he wrote to his wife, he might be a ‘king amongst them.’ This was the only cheering result of this disastrous voyage; and it seems clear enough that he indulged the hope of being yet able to return and to avail himself of their good-will; but the destruction of St. Thomas, and the occurrences that forced him back to England, made the scaffold the termination of his ill-fated career. It is admitted in the Spanish accounts of the attack on that place, that the firing commenced upon their side, but this was because the advance of the English left no doubt of their hostile intentions. There can be no question that its capture was, from the first, resolved upon. The following unpublished letter proves that they disembarked for that express purpose. The ferocious sentiments engendered by disappointment, and the unscrupulous determination which it avows to seek compensation in piracy, are not the least remarkable parts of it. Its writer, Captain Parker, commanded one of the five companies into which the invading force was divided. ‘We were a month,’ he says, ‘going up the Orinocco. At last we landed within a league of St. Thomas, and about one of the clock at night we made an assault, when we lost Captain Raleigh.

' But he lost himself with his unadvised rashness.  
' The Spaniard was not strong, and mistrusting our  
' potency fled, and lost their governor, with some  
' other captains who bravely died. When we were  
' possessed of the town, Captain Keymis took divers  
' gentlemen with him to find the mine, and trifled  
' up and down some twenty days, keeping us in  
' hope still of finding it. But at last we found  
' his delays mere illusions; for he was false to all  
' men, and most odious to himself, *loathing to live*  
' since he could do no more villainy. I will speak  
' no more of this hateful fellow to God and man.  
' But I will inform you as near as I can what we  
' that stay shall trust to. We have divided our-  
' selves already: Captains Whitney and Wollaston  
' are consorted to look for *homeward-bound men*.  
' The Admiral and Vice-Admiral will for New-  
' foundland to revictual, and after, to the Western  
' Islands to look for *homeward-bound men*. For my  
' part, by the permission of God, I will make a  
' voyage, or bury myself in the sea.\* This letter  
bears conclusively upon points which directly im-

\* Letter written by Captain Charles Parker, one of Sir W. Raleigh's Company at Guiana to Captain Alley. An. 1617.' Brit. Mus. Granb. MSS. 39, p. 342. We have, for the sake of brevity, omitted one or two sentences of no importance.

peach the rectitude of Raleigh's intentions. No one who peruses it can doubt that he had resolved, before leaving England, to take forcible possession of St. Thomas, and that all his pacific professions were feigned. Nor—supposing there were no other proofs—can it leave any doubt, that the failure as to the mine was followed by a resolution, to which he was a party, to seek indemnification in a piratical onset upon the Spanish colonial shipping. When Gondomar obtained an audience of King James to complain of Raleigh's breach of the peace, he contented himself with thrice exclaiming *piratos!* and then withdrew. Captain Parker's letter shows that this emphatic exclamation was not without warrant; but of this there are other proofs.

The suicide of Keymis, so uncharitably alluded to in this letter, is one of the most striking occurrences of this unwarrantable enterprise. On rejoining his commander, he endeavoured to justify his abandonment of the search for the mine by stating, that he had not a sufficient force either to enable him to persevere, or to open it to any purpose, though discovered; and, finding that his excuses were not only rejected, but that he was received with continued reproaches as the sole cause

of the ruin that was certain to ensue, he passed a few days in sullen abstraction, and then destroyed himself. The account of his former voyage to Guiana, shows that he was a firm believer in the mineral riches of that region. He was, in short, like his leader, the dupe of those deceptive appearances which had procured for it so fatal a renown; and the curious agreement before recited proves, that Raleigh was ready to stake his fortune and liberty upon Keymis's knowledge of the existence of a gold mine in its interior. The supposition that his suicide was the result of remorse, seems equally absurd and uncharitable. What could a subordinate agent in the adventure gain by feigning a belief which he did not entertain? That belief was not the profession of the day, but the creed of his life. That it was counterfeited to advance Raleigh's plans never was insinuated, even in the Royal Declaration. Indeed, it is not upon that supposition conceivable that Keymis would have been so stung by his reproaches as to put himself to death. It may be difficult, if not impossible, to account for any suicide, the motives of which are not exactly ascertained; but the truth with respect to Keymis would seem to be, that,

believing firmly in the existence of a mine in the neighbourhood of St. Thomas, and being awakened by the reproaches of his old commander to a full sense of the ruinous consequences of its non-discovery, he was prompted by feelings of shame and grief, arising from the thought that he had too hastily abandoned the search, to destroy himself. His uncertainty, from the state of Raleigh's health when he left him, whether he should, on his return, find him alive—a fact which he is said to have pleaded in defence of his conduct—renders this the only probable supposition that can be formed.

Raleigh, in one of his letters written at this time, says that 'God had given him a strong heart.' But, strong as it was, it sustained some trying blows from the disappointment of the hopes which he had so confidently built upon the mine, the loss of his son, the death by his own hand of one of his most faithful followers, and the angry complaints of those who 'hungered and thirsted for gold';—the most worthless being, as he said, the most clamorous, and the surest to try to injure him on their return to England. He was not, however, of a temperament to allow these disasters to sink

him into inaction. The spirit of the Drakes and the Cavendishes was at work within him, impelling him to enterprises similar to those which made their names terrible in the American seas. Though still weak from illness, he speedily set sail for Newfoundland, intending to revictual and refit his ships for the prosecution of his ulterior designs. But before he reached that place, most of them seem to have dispersed to follow other fortunes; and, on his arrival, a mutiny took place among his own crew, some wishing to continue at sea, the majority to return to England. With the latter he was forced, as is said in the Royal Declaration, to acquiesce and return—his intention being, as is there asserted, very different; while he, on the other hand, averred that such was from the first his determination. To us it appears certain that his resolution was, if possible, to keep at sea; and, indeed, the letters which he wrote to several persons in England, before arriving at Newfoundland, leave no room for any doubt as to this. From a careful consideration of some passages in these and other documents, we think it more than probable that it was his intention to make another attempt upon the mines of Guiana; and altogether undeni-

able, that he had resolved, in the mean time, to try his fortune at the expense of the Spanish car-racks. But the dispersion of his fleet, and the insubordination of his own crew, frustrated both purposes.

That piracy was in his immediate view, it would be vain to deny. Captain Parker's letter only confirms what always appeared to us to be clearly implied in his own letters, in one of which to his wife, he expresses his hope 'that God would send 'him something before his return,'—which could only mean something in the way of capture. But there is further and conclusive evidence of the fact. It appears that at one of the meetings of the Commission appointed, after his return, to inquire into his conduct, he was examined upon this point, in presence of two of his captains, and constrained to make a confession which settles the question. There is a minute of the proceedings of this Commission, in the handwriting of Sir Julius Cæsar, one of the body, which bears that, 'on being confronted with 'Captains St. Leger and Pennington, *he confessed* 'that *he proposed the taking of the Mexico fleet, if* 'the mine failed.'\* Mr. Tytler could not have

\* Brit. Mus. Lansdowne MSS. 142, fo. 412.

been aware of this decisive admission, otherwise he would not have attempted to discredit the following remarkable anecdote, preserved in Sir Thomas Wilson's report of his conversations with Raleigh:—

'This day,' says the spy, 'he told me what discourse he and my Lord Chancellor had had about taking the Plate fleet, which he *confessed he would have taken had he lighted upon it.* To which my Lord Chancellor said—"Why, you would have been a Pirate." Oh, quoth he, did you ever know of any that were Pirates for millions? they only that work for small things are Pirates.' Looking to the character in which Wilson writes, and unacquainted with Raleigh's admission in presence of the Commissioners, Mr. Tytler represents the report of the former as more than suspicious; adding, however, inconsistently enough, that the observation ascribed to Raleigh 'is characteristic.' If characteristic, does not that imply authenticity? The observation bears the stamp of Raleigh's mind and character; and his intentions respecting the Plate fleet being otherwise certain, we cannot for a moment doubt that it was truly reported.

Raleigh returned to Plymouth in July 1618, about a year after he sailed for Guiana. The want

of any publications devoted to contemporary occurrences, leaves us but scantily informed of the opinions then current respecting his proceedings. That the expedition itself attracted considerable notice, abroad as well as at home, is certain. Thus we find the celebrated Peiresc expressing, in a letter to Camden, great commiseration for Raleigh's misfortunes, and an anxious wish to be furnished with any account of his voyage that might be published.\* The fullest notices, in as far as we know, of domestic opinions, are those contained in two of Howell's once popular 'Letters;' the one written about the time of Raleigh's return, the other some years later, and more important, as being an answer to a remonstrance from Sir Carew Raleigh, respecting certain statements unfair, as he thought, to his father, contained in the first. From these letters we learn that Raleigh's return, unpardoned as he was, occasioned great and general surprise; and that his representations in regard to the mine were viewed as a lure thrown out to draw adventurers to Guiana, for the purpose of establishing a colony.

That Raleigh, unsuccessful, unpardoned, and a flagrant breaker of the peace, should have returned

\* *Camdeni Epistola*, p. 243.

voluntarily—thereby, to use words attributed to himself, ‘to put his neck under the King’s girdle,’—appears to us utterly incredible. It is true that he ever asserted, even upon the scaffold, that it was his purpose to return, whether successful or not; but it is nevertheless unquestionable, as his own letters show, that an *immediate* return, which certainly did take place, was far enough from his intentions. The recollection, too, of what passed between him and the French ambassador previous to his departure, makes his assertion on this point more and more questionable; and, indeed, renders the consideration of what is due to his dying declaration exceedingly embarrassing and painful. It may have been his intention to return, but only when he could do so enriched or successful; for we have seen what his notions were as to piracy upon the great scale; and it was a maxim of his, ‘that good success admits of no examination.’\* This would enable us to interpret his assertion with reference to some future time; and is, seemingly, the only charitable construction that can be adopted.† Such are the difficulties

\* See his ‘Apology.’

† In the before-mentioned letter from Sir Carew Raleigh to Mr. Howell, (which, however, was written many years after the

which he has thrown in the way of any satisfactory reliance upon his veracity and integrity. It is mortifying to think that the history of his life so often produces a painful struggle between feeling and reason—between the natural wish to believe him as exalted in moral as in intellectual perfections, and the unwelcome truths which his actual conduct forces upon our convictions.

From the imputation of deceit connected with the mine, we have already, as we think, completely exculpated him.\* To this topic we only therefore

event in question, he being then a youth,) it is stated that the Earls of Arundel and Pembroke had become personally bound to the King for Raleigh's return; and that his immediate re-appearance in England was owing to his honourable resolution to release them from that obligation. This explanation is adopted by Mr. Jardine. But that learned writer has repudiated Sir Carew's authority in regard to another statement made by him in the same letter; namely, that Lord Bacon had given it as his opinion that the Commission to Raleigh implied a pardon; but it is inconceivable that Sir Walter himself would not have appealed to such a fact, had it been true, in his 'Apology,' and at his execution. The story evidently originated in what passed on the scaffold, where, the Earl of Arundel being present, Raleigh reminded him, that he had given him his *promise* to return; but without once hinting at his having returned to free him and the Earl of Pembroke from any cautionary pledge.

\* His belief in the great metallic wealth of Guiana, and that in El Dorado, form different questions. With respect to the latter, it appears not unlikely that his opinions had undergone some change in the three-and-twenty years that elapsed between his first and his last voyage. Further information may have

revert, in order to state what transpired in regard to it, during the investigations which took place in presence of the Commission. The Attorney-General, Yelverton, having there alleged that Raleigh did not carry out any miners or instruments for mining, as he would have done had he really intended to open a mine; he stated distinctly that he had incurred an expense of two thousand pounds in providing both;\* an averment which, if not substantially true, would assuredly have been rebutted by those engaged in the expedition with whom he appears to have been then confronted.

As there was no actual commission of piracy, the only overt act of a criminal description with which Raleigh could be charged, was the invasion and partial destruction of St. Thomas. These unjustifiable aggressions must have originated in the belief that this small town was in the immediate neighbourhood of gold mines, that it had been erected on account of that proximity, and was rich

led to this; and it has struck us as remarkable, that he does not once allude to El Dorado in any of his later proposals to the Government, or in any document connected with his last voyage.

\* See Minute of proceedings, in the handwriting of Sir Julius Caesar. Brit. Mus. Lansdowne MSS. 142, fo. 412.

in accumulated ores; and that its possession was, moreover, necessary to the successful prosecution of the intended operations. Inconsiderable in itself, situated at a great distance from the coast, and approachable only by a dangerous navigation, there were no other inducements sufficient to account for Raleigh's hostile proceedings. That these inducements furnished no justification for his conduct, is clear enough. His defence of it, however, in his 'Apology,' was dexterous and plausible; and well suited to rouse responsive feelings in the breasts of his countrymen. He strongly urged that he was the original discoverer of Guiana; that he had taken possession of it, in the usual form, in name of the late Queen; that its chiefs had sworn allegiance to her and to England; that the King had himself recognised the rights thence resulting by granting sundry patents of settlement, and by authorizing him to open a mine in it; and that he was therefore entitled to enter it by force, and to remove any obstacles that prevented the accomplishment of his authorized design. But to all these arguments there was this brief, yet decisive answer,—that, in point of fact, the Spaniards had made a settlement in a particular spot which he

invaded and ravaged, though bound by his private assurances, as well as by the laws of nations, not to interfere with the possessions of any friendly power. Had he informed the Government that there was such a settlement in the quarter where the mine was alleged to be situated, he would not have been permitted, as he was well aware, to approach it; but this he concealed, as he himself admitted;\* a fact which impeaches his fairness and sincerity, and obliges us to conclude that his pacific professions were intended merely as blinds.Flushed with the success which he doubtless anticipated, he probably imagined that he should be able—if it really was his intention to return to England—to procure immunity for any hostile trespass; and it cannot well be doubted, that his proceedings would have been viewed with a very different eye, had they been attended with success. In judging of his conduct, in the actual circumstances, we ought, blameable as it must to us appear, to give him the benefit of the opinions of that day; and these, as regarded America, were so peculiar, as to allow nations at peace in Europe to make war upon each

\* Letter to Lord Carew, appended to his 'Apology.'

other in that quarter of the globe. Hence we find him contending, ‘that to think the peace could be ‘broken where there was no peace,’ was a palpable inconsistency; and hence, too, the plausibility of the pretext with which he hoodwinked the Government, that warlike preparations were necessary for his defence. Hume apologizes for Raleigh’s execution upon the old sentence, by observing, that owing to the abovementioned notion, no jury would have found a verdict against him. But ought we not in fairness to allow something to the prevalence of such a feeling, in judging of his conduct? And ought it not also to be remembered, that he only practised the lessons of the school in which he was bred—that school which Elizabeth gloried to cherish, and which laid the foundations of the naval sovereignty of England? Still, it is impossible to justify his insincerity and predetermined hostilities; for these apologies could only be pleaded in his behalf, in case of his having sailed from England unfettered by any positive obligations. They somewhat alter the complexion of his conduct, but do not free it from censure. There is, in a word, only one redeeming feature in all Raleigh’s proceedings connected with Guiana—the

reach and constancy of the views which they disclose for promoting colonization and commerce.

Before arriving at Plymouth, Raleigh learned that a royal proclamation had been issued, strongly condemning his conduct, and calling upon all who could give any information upon the subject to repair to the Privy Council; and soon after landing, he was put under arrest by Sir Lewis Stukely, Vice-Admiral of Devonshire, to whom a warrant for that purpose had been entrusted. He had previously gone on board a vessel with the view of escaping to France; but, owing to some unexplained and unaccountable emotion, he returned without making the attempt. His subsequent expedients, prior to his recommitment to the Tower, to gain time for another attempt, or to enable his friends to intercede for him, are so degrading, as to make it difficult to believe that we are reading of the hero of Cadiz and Fayal. In these humiliating proceedings, Stukely, who was his relation, and a French medical practitioner of the name of Manourie, affected to assist, but secretly betrayed him. Their misdeeds are unworthy of remark; but the artifices of Raleigh, for which, strange to say, Mr. Tytler puts in the claim of *dexterity*, de-

mand notice, as well on account of the painful contrast they exhibit to his great qualities, as of his having himself vindicated them by a perverted appeal to the authority of Scripture. Society, it would seem, was yet in a state when such a man could seriously plead that the madness he feigned was justified by the example of David King of Israel!—to which, it will be recollectcd, his brilliant rival Essex also appealed in excuse for some of his immoralities. It was during this pitiable interval that he composed his ‘Apology for his ‘last voyage to Guiana’—a pleading both forcible in argument and eloquent in style, and which, considering the depressing circumstances in which it was written, furnishes a striking proof of his ready command of those intellectual resources with which he was gifted.

Soon after his recommitment to the Tower, the Commission of Inquiry was appointed; and sundry ‘examinations, re-examinations, and confrontments’\* took place at its meetings. He was at the same time placed under the immediate inspection of Sir Thomas Wilson, for the purpose chiefly of drawing from him some disclosures regarding his supposed

\* *Royal Declaration.*

intercourse with France. Le Clerc, the French agent, had proffered his assistance towards Raleigh's escape; in consequence, we have no doubt, of what passed with the ambassador previous to his sailing to Guiana; and the offer having been discovered, James became exceedingly jealous of the supposed interference of his brother of France, and proportionably anxious to ascertain its objects. A record of the inquisitorial proceedings to which his apprehensions gave rise, has been preserved in the minutes kept by Wilson. From these it appears, that the Sovereign and his agents—the Secretary of State, and the immediate spy—were thoroughly baffled in their expectations; but their objects were pursued at the cost of a most harassing interference with the privacy and occupations of the unhappy prisoner. It is impossible to view their ignoble proceedings—descending even to the violation of the letters that passed between him and his wife—without strong indignation; and history will, with difficulty, maintain the necessary decorum of her language in recounting these additional proofs of James's baseness, and of his malignant treatment of the illustrious though erring man subjected to his power. The extracts that have been published

from these minutes\* contain some remarkable particulars. Suicide appears to have more than once been the subject of discussion between the spy and Raleigh. We recollect that, in his 'History of the 'World,' he approves of the conduct of Demosthenes in taking poison to disappoint his enemies; and Sir Thomas Wilson states, that he commended 'the magnanimity of the Romans, who would 'rather have their deaths by their own hands than 'endure any that was base or reproachful. To 'which I answered,' says the pious Knight, 'that 'they were such as knew not God, nor the danger 'of their souls to be damned to perpetual torment 'for destroying their bodies. To which he said, 'it was a disputable point; for divers did hold 'opinion that a man may do it, and yet not 'desperately despair of God's mercy, but die in 'God's favour.' This, it will be remembered, was the opinion expressed in the letter to his wife, written when he was meditating suicide.

The loud complaints of the Spanish ambassador, and James's eager desire to conclude the pending negotiation for a match between Prince Charles and the Infanta, made the demand of Spain for Raleigh's

\* See Jardine's *Crim. Trials*, and Tytler's *Life*.

life but too certain to be complied with. But the novelty, and the extraordinary circumstances of the case, occasioned much difficulty amongst the sages of the law, as to the proper course of proceeding. Being under an unpardoned sentence for treason, it was held that he must be viewed as civilly dead, and consequently not triable for any new offence. It is unfortunate for the law when its refinements place it in conflict with the common sense and common feelings of mankind; and such was the case in a remarkable degree, when, in consequence of this legal subtlety, it was resolved to carry into execution a sentence sixteen years old—iniquitous from the first, and followed by the protracted punishment of thirteen years' imprisonment. Such was the precious result of James's cunning and kingcraft; for had Raleigh been pardoned when he was liberated, he might have been brought to trial in some competent form, and the law would have vindicated itself by maintaining both the reality and the appearance of justice. His execution upon the antiquated sentence, is unquestionably one of the most revolting acts that stains the annals of British criminal procedure. It is so far consolatory to know, that the indignation which it roused reduced even

James, the great advocate of irresponsible kingship, to the necessity of appealing to his people in vindication of his conduct; and that his vindictory 'Declaration', though aided by the pen of Lord Bacon, produced no favourable effects. A sentence of condemnation, founded upon the inborn and immutable feelings of the human heart, had gone forth against him; and it was rendered irreversible by the general belief that Raleigh was sacrificed to gratify the resentment, and to appease the fears of the ancient enemy of his country. The justness of that belief is placed beyond all question by a despatch written upon the occasion to the British ambassador in Spain; and, surely, if aught done against his own and his people's honour can consign the memory of a ruler to lasting reprobation, the following admission ought so to dispose of that of James:—'Let them know,' says this despatch, 'how able a man Sir Walter Raleigh was to have done his Majesty service, if he should have been pleased to employ him; yet to give them content, he hath not spared him, when by preserving him he might have given great satisfaction to his subjects, and had at his command as useful a man as served any prince in Christendom.'\*

\* Rushworth's *Hist. Coll.* vol. i.

Upon the details of Raleigh's execution, which took place in October 1618, we cannot enter, tempting as the occasion is. Few, if any, ever on a scaffold kindled such emotions of pity, wonder, and admiration. His deportment evinced a degree of mental strength, self-possession, calmness, and superiority to the fear of death, that might be described as godlike. His devotion appeared sincere and elevated, and tempered a courage which nothing could shake. 'He was,' says the Bishop of Salisbury, who attended him officially, 'the most fearless 'of death that ever was known, and the most resolute and confident, *yet with reverence and conscience.*'

That which is so necessary to a satisfactory delineation of a great man—the details of his daily and familiar life—we have no means of supplying; but the curiosity which is universally felt in regard to the personal appearance of such men, has not been left ungratified. We have notices of Raleigh's person by Sir Robert Naunton and Sir John Harrington, both of whom knew him well; and by Aubrey, whose information was derived from others, to whom also he was well known. The first tells us that 'he had in the outward man a good pre-

sence, in a handsome and well-compacted person';\* the second, in mentioning what he describes as an ominous fall from his horse, by which his face was hurt, says, that it was 'thought a very good face';† and the last particularizes his lineaments rather curiously, by stating, that besides being 'tall and 'handsome, he had a most remarkable aspect, an 'exceeding high forehead, long face, and sour eye-lids.'‡ In an age of great magnificence in dress, Raleigh was conspicuous, and particularly for the silver armour in which, as Captain of the Guard, he rode abroad with the Queen. One of his portraits mentioned by Aubrey represents him 'in a white 'satin doublet, all embroidered with rich pearls, 'and a mighty rich chain of great pearls about 'his neck.'

The various qualities which fit men for action and for speculation were conjoined in Raleigh, and by turns displayed, in so eminent a degree, that 'he seemed,' as Fuller observed, 'to be like Cato 'Uticencis, born to that only which he was about.' His mind displays a surprising union of strength and versatility; of intellectual and practical power;

\* *Frag. Regalia*—Art. RALEIGH.      † *Nugæ Antiquæ*, ii. 125.  
‡ Aubrey's *Lives*, ii. 511.

and of a reflective and philosophical, with a highly imaginative or poetical temperament. In that rarest, perhaps, of intellectual gifts—that which enables the individual to rise above the acquirements and opinions of his own age, and to anticipate those of times yet to come, he has, and by no incompetent judge assuredly, been thought worthy to be classed with Bacon. ‘Notwithstanding the diversity of their ‘professional pursuits, and the strong contrast of ‘their characters, these two men,’ says Mr. Stewart, speaking of Bacon and Raleigh, ‘exhibit in their ‘capacity of authors some striking features of re-‘semblance. Both of them owed to the force of ‘their own minds their emancipation from the ‘fetters of the schools; and both were eminently ‘distinguished above their contemporaries by the ‘originality and enlargement of their philosophical ‘views.’\* An incidental remark by Cecil, contained in a private letter, has apprised us of his possession of a power scarcely less enviable than original genius itself; and to which the extent of his acquisitions, so surprising in a man of such active pursuits, was no doubt ascribable. ‘He can toil terribly,’ were

\* *Dissert. on the Hist. of Met. and Eth. Philosophy.*

the words of the Secretary;\* and the intimation, though brief, furnishes a valuable addition to our knowledge of his character.

Narnton describes him as gifted with ‘a bold and plausible tongue.’ The same author, who was far from partial, adds, that Queen Elizabeth was much ‘taken with his elocution, loved to hear his reasons, ‘and took him for a kind of oracle.’ But the strongest proof of his attraction in this way was, that even Essex preferred his conversation to that of most of his own friends. ‘I have often observed,’ said Sir Arthur Gorges, speaking of Essex, ‘that both in ‘his greatest actions of service, and in his times ‘of chiefest recreations, he would ever accept of ‘his (Raleigh’s) counsel and company, before many ‘others that thought themselves more in his favour.’† Yet, notwithstanding those powers of elocution that so captivated Elizabeth and Essex, his pronunciation—if we are to rely on Aubrey—ever continued to betray the accent of his native province. ‘I ‘have,’ says this writer, ‘heard old Sir Thomas

\* See Appendix to Mrs. Thomson’s Life of Raleigh, in which this letter—otherwise valuable, as showing that he was beloved by his immediate dependents—was first printed.

† Purchas, iv. 1950.

'Mallet, who knew Sir Walter, say, that he spoke  
'broad Devonshire to his dying day.'

From the imputation of impiety with which Raleigh was so unjustly aspersed, he was relieved by the publication of his 'History of the World.' Originating, apparently, in his freely expressed opinions respecting some doctrines of the schools,\* it owed its dissemination to a libellous attack on the chief courtiers of Queen Elizabeth, written by Father Parsons, the noted Jesuit. He does not appear to have made any direct reply to the charge; but those of his friends with whom he was in the habit of conversing upon such subjects, knew that it was unfounded; and the publication of his great work made his opinions advantageously known to all the world. But with respect to his moral character, we can find little that is favourable in the sentiments of his contemporaries. Though unquestionably possessed of friendly dispositions, kindly affections, and much tenderness of heart; and though all his opinions and feelings, as expressed in his writings, were strongly on 'virtue's side,' he never was considered as a man whose conduct was steadily regulated by either truth or

\* Osborn's *Miscellany of Essays and Paradoxes*.

probity. Even where his aims appeared great and worthy, they were believed to be contaminated by the admixture of an impure and grasping ambition. Though always 'gazed at as a star,'\* the feelings with which his path was viewed were far from those of love, confidence, or reverence. But the grand and devout demeanour displayed at his execution, made men unwilling to dwell upon his faults, and threw all unpleasing recollections into the shade. Had James been a great and magnanimous, instead of a mean and pusillanimous Prince, the name of Raleigh, though it would have been recorded among the other conspicuous characters of his time, would not have descended to us with that halo of literary and martyr-like glory which still surrounds it, and will, in all probability, accompany it to a more distant posterity.

\* The words of the Attorney-General, Yelverton, at the mock judicial process employed to give a colour of legality to the order for executing the old sentence.

THE END.

Cambridge, 1853.

# MACMILLAN AND CO.'S

## LIST OF PUBLICATIONS.

### MISCELLANEOUS.

#### I.

##### Lord Bacon and Sir Walter Raleigh:

Critical and Biographical Essays. By MACVEY NAPIER,  
Esq., late *Editor of the Edinburgh Review*.  
Post 8vo. cloth, 7s. 6d. Just published.

#### II.

##### Phaethon; or Loose Thoughts for Loose Thinkers.

By the Rev. CHARLES KINGSLEY, Canon of Middleham  
and Rector of Eversley; Author of "The Saint's Tragedy", &c.  
&c. Crown 8vo. sewed, 2s.

"The Dialogue of Phaethon has striking beauties viewed apart from its expressed reference to this modern form of heresy; and its suggestions may meet half way many a latent doubt, and, like a light breeze, lift from the soul clouds that are gathering heavily, and threatening to settle down in wintry gloom on the summer of many a fair and promising young life."

SPECTATOR, Oct. 2.

"We are glad to commend *Phaethon*."—EXAMINER.

"Is much to be recommended."—CHRISTIAN REMEMBRANCER.

"One of the most interesting books we ever read."

NONCONFORMIST, Jan. 19, 1853.

"We cordially welcome Mr. Kingsley into the field of discussion on which he has here entered. It is one in which he is capable beyond most of doing the state some service."—BRITISH QUARTERLY.

"The figure of Professor Windrush is skilfully brought out, touch after touch. Many of the separate strokes are capital, and place before us to the life one phase or other of the modern American free-thinker."

PROSPECTIVE REVIEW, Feb. 1853.

#### III.

##### Sonnets on the Death of the late Duke of Wellington.

By SEBASTIAN EVANS.

8vo. 1s.

"Thoughtful and earnest, and in every way possess real merit."—EXAMINER.

"Have an eloquence and poetic rhythm which will suffice to distinguish them from the crowd of similar compositions."—CRITIC.

"Truly poetical and exceedingly thoughtful."—JOHN BULL.

"Grace of sentiment, and poetry of expression."—ATRENUM.

*Miscellaneous.*

## IV.

**Letters from Italy and Vienna.** Fcp. 8vo. cloth, 5s. 6d.*"Living and life-like."*—SPECTATOR.*"Since Mr. Matthews' well-known and ever-fresh Diary of an Invalid, we have not met with a more pleasant and readable volume of this class than the little work before us."*—ENGLISH CHURCHMAN.

## V.

**Klopstock's Odes.**

Translated from the German. By the Rev. W. NIND, M.A., Fellow of St. Peter's College, Cambridge. Fcap. 8vo. cloth, 6s.

*"Klopstock has been peculiarly fortunate in falling into the hands of an author, whose poetical genius enables him to give full effect to the tenderness and grace with which these Poems abound. There are a thousand beauties in this little volume."*—ENGLISH REVIEW.

## VI.

Preparing for Publication; to be completed in about five Parts, price 5s. each, forming one volume, 8vo., of about 500 pages, with nearly 1000 Illustrations in the Text, drawn and engraved by the Author.

**A Manual of the Genera of British Fossils.**

Comprising Systematic Descriptions of all the Classes, Orders, Families, and Genera of Fossil Animals, found in the Strata of the British Isles: with Figures of all the Generic Types. By FREDERICK MC'OY, Professor of Geology and Mineralogy, Queen's College, Belfast.

## VII.

Preparing for Publication, by the same Author, Crown 8vo., with numerous Illustrations,

**An Elementary Introduction to the Study of Palæontology.** With numerous Figures illustrative of Structural Details.*This little Work is intended to supply all that elementary information on the Structure of Fossil Animals, with references to the most nearly allied existing types, illustrated explanation of technical terms, &c., which the beginner may require, but which would be out of place in the Author's systematic volume on the Genera.*

## VIII.

**Cambridge Guide.**

A New Edition, with Engravings and a Map.

Royal 18mo. cloth, 5s. 6d.

## IX.

**Bishop Halifax's Analysis of the Civil Law.**

A new Edition, with alterations and additions. By J. W. GELDART, LL.D. 8vo. cloth bds. 8s. 6d. Interleaved, 10s. 6d. Double interleaved, 12s. 6d.

Macmillan and Co.

## THEOLOGY.

### I.

#### The Prophets and Kings of the Old Testament.

By the Rev. F. D. MAURICE, M.A., Chaplain of Lincoln's Inn, Professor of Divinity in King's College, London.

Crown 8vo. cloth. 10s. 6d. *Just Published.*

" . . . . . Man as an individual is only intelligible to the Preacher of Lincoln's Inn when regarded as a member of a family, of a state, of a race, and appears to him only then in his natural condition when fully conscious of and endeavouring to realize the duties and the privileges that arise out of these relations. \* \* \* \* \* No statesman, no politician, no student of history, can fail to derive instruction from a mode of treating history, in which the essential is mainly dwelt upon, in which right and wrong and their issues are the theme of the preacher, rather than cleverness, or splendour, or material greatness and the 'shows of things.' In some respects so strikingly different, yet in this main feature Mr. Maurice's lectures on Jewish History resemble Carlyle's History of the French Revolution, only that for the 'eternal laws' and 'inexorable destiny' of the lay preacher, the Christian professor of history substitutes with no shame-faced periphrasis the action of a personal God, whose absolute will struggles with the reluctant wills of men, and out of the struggle gradually emerges harmony, submission, and the kingdom of heaven.

\* \* \* \* Mr. Maurice does not in these Sermons directly controvert either the methods or the results of the *critical* school; but he frequently does so in effect, by exhibiting events in a rational and harmonious connexion, in which that school has seen nothing but absurdity and contradiction. Moreover, the general spirit of this book is antagonistic to theirs."—*SPECTATOR*, Jan. 22.

"He approaches the Prophets more as an historian than as a theologian, and seeks only to see with their eyes into the spirit of their times, that from their vivid view of the presence and action of God in human affairs he may give reality to English religion. . . . . We recommend this volume to the careful study of our readers. They will find in it not only rich helps, but also strong attractions to the intelligent reading of the Prophecies."—*PROSPECTIVE REVIEW*, Feb. 1853.

"We have lingered over these pages with pleasure. . . . . We must invite and strongly recommend our readers to buy the book and give it a perusal. It is quite new in the line of exposition. . . . It is a natural yet devout and purely philosophical apprehension of the subject itself, apart from the treasures of Biblical and literary illustration, that commands our admiration; and this *reflective* power, chastened and gaided as it is in Mr. Maurice, by a devout and purely evangelical principle, must have our unqualified praise."—*CHRISTIAN TIMES*.

Cambridge.

*Theology.*

## II.

**The Restoration of Belief.**

Crown 8vo. sewed, 2s. 6d. each.

## CONTENTS :

**Part I.** Christianity in relation to its Ancient and Modern Antagonists.

**Part II.** On the Supernatural Element contained in the Epistles and its bearing on the argument.

**Part III.** The Miracles of the Gospels considered in their relation to the principal features of the Christian Scheme.  
Which completes the work. *Nearly ready.*

*"We are charmed with the calm, lucid, and orderly treatment of the great question."*—ECLECTIC, Feb. 1853.

*"Calm and invincible logic."*—NORTH BRITISH REVIEW, Nov. 1852.

*"Worthy of becoming one of our standard works on the Christian Evidences."*—Nonconformist, Dec. 15, 1852.

*"Able and powerful. Its theme is not one that we can discuss, but we bear willing testimony to the writer's candour and to his powers."*—ATHENÆUM.

## III.

**Sermons, Doctrinal and Practical.**

By the Rev. WILLIAM ARCHER BUTLER, M.A., late Professor of Moral Philosophy in the University of Dublin. Edited, with a Memoir of the Author's Life, by the Rev. THOMAS WOODWARD, M.A., Vicar of Mullingar. With Portrait, Second Edition. 8vo. cloth lettered, 12s.

*"An eminent divine and a profound thinker."*—ENGLISH REVIEW.

*"May justly take rank with the first writings in our language."*—THEOLOGIAN.

*"Poet, orator, metaphysician, theologian,—'nihil tetigit quod non ornavit.'*"  
DUBLIN UNIVERSITY MAGAZINE.

*"A man of whom, both as regards his life and his remarkable powers, his Church may be justly proud."*—THE GUARDIAN.

*"These Sermons present a richer combination of the qualities for sermons of the first class than we have met with in any living writer..... discrimination and earnestness, beauty and power, a truly philosophical spirit. They are models of their kind."*—BRITISH QUARTERLY.

## IV.

**Notes, Explanatory and Critical, on the Books**

of JONAH and HOSEA. By the Rev. W. DRAKE, M.A., late Fellow of St. John's College, Cambridge. 8vo. cloth, 9s.

*Just Published.*

Macmillan and Co.

V.

**Twenty Sermons for Town Congregations.**

By the Rev. CHARLES HARDWICK, M.A., Fellow of St. Catharine's Hall, and Cambridge Preacher at the Chapel Royal, Whitehall, Author of "A History of the XXXIX Articles." Crown 8vo. cloth. 6s. 6d.

"*Possess a clearness, and candour, and strength of feeling and language not at all usual.*"—GUARDIAN, Feb. 9, 1853.

"*Orthodox—well written.*"—ECCLESIASTIC.

VI.

*By the same Author,*

**\*A History of the Christian Church from the Seventh Century to the Reformation.**

Crown 8vo. cloth. *In the Press.*

VII.

**\*An Introduction to the Study of the Gospels:**

Including a new and improved Edition of 'The Elements of the Gospel Harmony.' With a Catena on INSPIRATION, from the Writings of the Ante-Nicene Fathers. By the Rev. BROOKE FOSS WESTCOTT, M.A., Fellow of Trinity College, Cambridge, and Assistant Master in Harrow School. Crown 8vo. cloth. *Shortly.*

"*Deserves and will command attention.*"

CHRISTIAN REMEMBRANCER.

"*With peculiar gratification do we welcome the truly learned, vigorous, and genial work of Mr. Westcott,..... The whole style of Mr. Westcott's book shows how possible it is to think profoundly without undermining the foundations of faith, and to be a debtor to Germany without being a slave.*"

NORTH BRITISH REVIEW, Nov. 1852.

"*It does him great credit and is full of promise..... We should urge our readers to make themselves acquainted with the book.*"

BRITISH QUARTERLY.

VIII.

*By the same Author,*

Preparing for immediate Publication, uniform with the above,

**\*An Introduction to the Study of the Canonical**

Epistles; including an attempt to determine their separate purposes and mutual relations.

\* THESE THREE BOOKS ARE PARTS OF A SERIES OF THEOLOGICAL MANUALS WHICH ARE IN PROGRESS.

Cambridge.

*Theology.*

## IX.

**"The Fitness of Holy Scripture for Unfolding the**

Spiritual Life of Man: Christ the Desire of all Nations; or the Unconscious Prophecies of Heathendom." Being the Hulsean Lectures for the Years 1845 and 1846. By the Rev. RICHARD CHENEVIX TRENCH, M.A., of Trinity College, Cambridge, Professor of Theology in King's College, London, and Author of "Notes on the Parables". Second Edition. 8vo. bds. 7s. 6d.

## X.

**Bishop Jewell's Apology of the Church of England.**

And an Epistle to Seignior Scipio concerning the Council of Trent. Translated, with Notes. Fcap. 8vo. bds. 5s.

XVII.

**S. Justini Philosophi et Martyris *Apologia Prima.***

Edited, with a corrected Text and English Introduction, containing a Life of the Author and explanatory Notes, by the Rev. W. TROLLOPE, M.A., Pembroke College, Cambridge. 8vo. bds. 7s. 6d.

XVIII.

**Justin Martyr's Dialogue with Trypho the Jew.**

Translated from the Greek into the English, with Notes, chiefly for the advantage of English Readers; a Preliminary Dissertation, and a short Analysis. By HENRY BROWN, M.A., (Originally printed in 1745.) 8vo. bds. 9s.

XIX.

**An Epitome of the History of the Christian Church**

during the first Three Centuries and during the time of the Reformation. Adapted for the use of Students in the Universities and in Schools. With Examination Questions. By W. SIMPSON, M.A., of Queens' College, Cambridge. Second Edition, improved. Fcap. 8vo. cloth, 6s.

Cambridge.

**GRAMMAR.****I.****The Elements of Grammar taught in English.**

By the Rev. E. THRING, M.A., Fellow of King's College,  
Cambridge. 18mo. bound in cloth, 2s.

*"A very able book it is, both in substance and form."*—**SPECTATOR.**

*"A clever and scientific little book."*—**GUARDIAN.**

*"A genuine contribution to the wants of the age."*—**CHRIST. TIMES.**

*"Written with great skill."*—**THE EDUCATOR.**

*"For this the teacher and learner will thank him."*

**NONCONFORMIST.**

*"The technicalities of ordinary Grammars are relieved by familiar conversations, which elicit their meaning and pave the way for the intelligent application of the principles of grammar."*

**JOHN BULL.**

*"We strongly recommend this grammar to the attention of those who are interested in Education."*

**ENGLISH JOURNAL OF EDUCATION.**

*"Small books, and treating, as they profess, only on the elements of Grammar; but presenting them with much clearness and skill, so as not to repel by the artificialness, but rather to interest by the naturalness, of the mode in which the knowledge is communicated."*—**BRITISH QUARTERLY.**

**II.****The Child's Grammar.**

Being the substance of the above, with Examples for Practice.  
Adapted for Junior Classes. 18mo. limp cloth, 1s.

*"The most rational we have seen; it is worked out with simplicity, precision, and completeness."*—**THE NONCONFORMIST.**

*"THIS BOOK CANNOT BE TOO STRONGLY RECOMMENDED OR TOO WIDELY CIRCULATED. ITS PRICE IS SMALL AND ITS VALUE GREAT."*—*Athenaeum.*

**III.****Elementary Arabic Grammar. 'Al Adjrumieeh.'**

The Arabic Text, with an English Translation. By the Rev. J. J. S. PEROWNE, Fellow and Assistant Tutor of Corpus Christi College, Cambridge.

Cloth, lettered, 5s.  
Macmillan and Co.

## CLASSICAL.

### I.

#### **Æschyli Eumenides.**

The Greek Text with English Notes: with an Introduction, containing the substance of Müller's Dissertations and the Discussions of his Critics; and an English Metrical Translation. By B. DRAKE, M.A., Fellow of King's College, Cambridge, Editor of "Demosthenes de Corona."

8vo. cloth, 7s. 6d. *Just ready.*

### II.

#### *PLATO.*

#### **Plato's Republic.**

A new Translation into English, with an Introduction and Notes. By two Fellows of Trinity College, Cambridge, (D. J. VAUGHAN. M.A., and the Rev. J. LL. DAVIES, M.A.) Crown 8vo. cloth, 7s. 6d.

"A really good, by which we mean a literal and elegant translation."—*SPECTATOR.*

"Reads like an original composition."—*CRITIC.*

"Refined scholarship. A very able critical Introduction and a careful Analysis."—*ENGLISH REVIEW.*

"A sound and scholarly version. It is more, it is,—a rare virtue in classical translations,—'done into choice English.' Besides this, it has a sensible introduction and a close analysis."—*CHRISTIAN REMEMBRANCE.*

"A valuable contribution to the study of Plato."—*LITERARY GAZETTE.*

"There is a good Introduction prefaced, to explain to the unlearned reader some of the points in the Platonic philosophy which are sometimes misrepresented, or at least misunderstood, such as the nature of dialectics, ideas, &c. We recommend this volume to the attention of those who would gladly learn something of the great founder of the academy."—*THE JOURNAL OF EDUCATION.*

"This translation far surpasses any other. We believe that scholars universally will warmly acknowledge its truth to the thought and spirit of the original. And we are sure that it is what other versions known to us are not, namely English,—free, nervous, idiomatic English, such as will fascinate the reader.....The Introduction is able and interesting. The Analysis is a performance of exceeding merit, a clear and satisfying presentation of the essence of the dialogue beautifully written."—*NONCONFORMIST,* August 4, 1852.

"We trust that the existence of so eloquent and correct a version may induce many to become Students of the Republic. An Analysis is prefaced which will be found a very material help to the comprehension of the Treatise. The whole book is scholarlike and able."—*GUARDIAN.*

"No one competent to offer an opinion on this subject, will refuse to Messrs. Davies and Vaughan the highest praise for the fidelity and eloquence with which they have translated this Dialogue. The Introduction is excellent in itself, and admirably prepares the reader for the work it introduces."—*THE LEADER.*

Cambridge.

## III.

**Juvenal: chiefly from the Text of Jahn.**

With English Notes for the use of Schools. By J. E. MAYOR,  
M.A., Fellow of St. John's College, Cambridge. Crown 8vo.  
cloth. *Just ready.*

## IV.

**Mr. Merivale's (Author of the "History of Rome")  
Sallust for Schools.** Crown 8vo. cloth, price 5s.

*"A very good Edition; to which the Editor has not only brought scholarship  
but independent judgment and historical criticism."*

SPECTATOR, Sept. 18.

*"An excellent edition. The English Notes, which are abundant, are clear and  
very helpful."*—GUARDIAN, Oct. 6, 1853.

*"This School Edition of Sallust is precisely what the School edition of a  
Latin Author ought to be. No useless words are spent in it, and no words  
that could be of use are spared. The text has been carefully collated with  
the best Editions. It is printed in a large bold type, which manifests a  
just regard for the young eyes that are to work upon it: under the text  
there flows through every page a full current of extremely well selected  
annotations."*—THE EXAMINER.

*"Our youthful classical scholars are highly favoured in being provided with  
an Edition of Sallust from so accomplished an Editor as Mr. Merivale.....  
The annotations of an Editor possessing such rare qualifications for the  
successful discharge of his duties could not but be—as we find them—very  
valuable, whether we consider the grammatical and historical information  
which they convey, or the illustrative quotations and references with which  
they abound. Other primal excellencies in them are, their transparent  
simplicity and their comparative brevity..... An excellent account of  
Sallust and his works will be found in the Introduction."*

ATHENÆUM, March 12, 1853.

## V.

**Sophoclis Electra.**

The Text of Dindorf, with Notes Critical and Explanatory.  
By the Rev. CHARLES BADHAM, D.D., St. Peter's College,  
Cambridge, and Head-Master of the Royal Free Grammar  
School, Louth. *Shortly.*

## VI.

**Aristophanes.**

A Revised Text: with a Commentary. By W. G. CLARK,  
M.A., Fellow and Assistant Tutor of Trinity College, Cambridge.  
*Preparing.*

Macmillan and Co.

VII.

**Aristotle.**

The Rhetoric of Aristotle ; the Greek Text : with English Notes, Critical and Explanatory. *In Preparation.*

VIII.

**Theocritus.**

The Greek Text, with English Notes, Critical and Explanatory, for the Use of Colleges and Schools. By the Rev. E. H. PEROWNE, M.A., Fellow of Corpus Christi College. Crown 8vo. *Nearly ready.*

IX.

**Demosthenes De Corona.**

The Greek Text, with English Notes. By B. W. F. DRAKE, Fellow of King's College, Cambridge, Editor and Translator of the "Eumenides of Aeschylus". Crown 8vo. cloth, 5s.

"Will enable a student to read the original with comparative ease."—LIT. GAZETTE.

"Useful notes."—GUARDIAN.

"A neat and useful Edition."—ATHENÆUM.

X.

**Translation of Demosthenes on the Crown.**

By the Rev. J. P. NORRIS, Fellow of Trinity College, Cambridge, and one of Her Majesty's Inspectors of Schools. Sewed, 3s.

"The best translation that we remember to have seen."

LIT. GAZETTE.

"Very accurate."—GUARDIAN.

"Admirably representing both the sense and style of the original." ATHENÆUM.

XI.

**Hellenica; or a History of Greece in Greek,**  
beginning with the Invasion of Xerxes, Part, I.; as related by  
Diodorus and Thucydides. With Explanatory Notes, Critical  
and Historical, for the use of Schools. By J. WRIGHT, M.A.,  
of Trinity College, Cambridge, and Head-Master of Sutton  
Coldfield Grammar School. 12mo. cloth, 3s. 6d.

*This book is already in use in Rugby and other Schools.*

Cambridge.

**MATHEMATICAL.****I.****A Treatise on Elementary Mechanics:**

With numerous Examples. By STEPHEN PARKINSON, M.A., Fellow and Assistant Tutor of St. John's College, Cambridge.

*Preparing.*

**II.****A Treatise on the Differential Calculus; and the**

Elements of the Integral Calculus. With numerous Examples. By I. TODHUNTER, M.A., Fellow of St. John's College, Cambridge.

Crown 8vo. cloth, 10s. 6d.

"TO THE DIFFERENT CHAPTERS WILL BE FOUND APPENDED EXAMPLES SUFFICIENTLY NUMEROUS TO RENDER ANOTHER BOOK UNNECESSARY. The examples have been selected almost exclusively from the College and University Examination Papers."—PREFACE.

"A TREATISE WHICH WILL TAKE ITS PLACE AMONGST OUR STANDARD EDUCATIONAL WORKS. THE EXPLANATIONS IN THE EARLY PARTS OF THE VOLUME ARE CLEAR AND CONVINCING AND CANNOT FAIL TO INTEREST THE STUDENT."—*English Journal of Education.*

"FOR THE GREAT BULK OF MATHEMATICAL STUDENTS—ESPECIALLY AT THE BEGINNING OF THEIR ACQUAINTANCE WITH THE CALCULUS—WE HAVE NOT SEEN A TREATISE SO WELL ADAPTED AS THE PRESENT. The author comes before the world backed by unusually strong recommendations: having enjoyed the honourable distinction of being a favourite pupil of Mr. De Morgan, at University College; and having obtained the highest honours from the University of London before proceeding to Cambridge, where he carried all before him in his College, and came out Senior-Wrangler and First Smith's Prizeman. Both before and since taking his degree he has had the additional advantage of great experience in the art of tuition. With such antecedents, it is not surprising that Mr. Todhunter should have succeeded in producing a treatise of remarkable merit.....In establishing theorems, Mr. Todhunter has consulted the advantage of his reader by often giving more than one method of investigation.....He has evidently bestowed great pains upon the execution of his task: which does no less credit to his careful accuracy than his superior mathematical attainments and skill."—ATHENÆUM, Mar. 19, 1853.

**III.**

*Shortly will be Published (by the same Author),*

**A Treatise on Analytical Statics.**

With numerous Examples.

**IV.****Solutions of Senate-House Problems for Four Years**

(1848 to 1851). By N. M. FERRERS, and Rev. J. S. JACKSON, Fellows of Caius College, Cambridge.

8vo. cloth, 15s. 6d.

Macmillan and Co.

V.

**Solutions of the Senate-House Riders for Four Years**

(1848 to 1851). By the Rev. F. J. JAMESON, M.A., Fellow of Caius College, Cambridge. 8vo. cloth, 7s. 6d.

The above two books will be found very useful to Teachers preparing Students for the University of Cambridge, as they shew PRACTICALLY the nature of the changes introduced by the "Mathematical Board," in 1848.

VI.

**Arithmetic and Algebra in their Principles and**

Application: with numerous systematically arranged Examples taken from the Cambridge Examination Papers. With especial reference to the ordinary Examination for B.A. Degree. By the Rev. BARNARD SMITH, M.A., Fellow of St. Peter's College, Cambridge. Crown 8vo. cloth, 10s. 6d.

"It is a good solid volume of upwards of 500 pages, including eighty pages of valuable Appendices, in the form of Senate-House Examination Papers, and Answers to the Examples. .... IT IS ONE OF THE REALLY GOOD BOOKS WHICH THE WORLD RECEIVES ONLY WHEN A TEACHER OF THE FIRST CLASS SITS DOWN TO DISCLOSE THE EXTENT OF HIS KNOWLEDGE AND THE SECRET OF HIS SUCCESS. .... Every anticipation raised by the Title-page is honourably fulfilled by the text."—EDUCATIONAL TIMES, March 1853.

VII.

*In Preparation (by the same Author).*

**Mechanics and Hydrostatics.**

On a similar plan.

VIII.

**Elementary Mechanics.**

Accompanied by numerous Examples solved Geometrically. By J. B. PHEAR, M.A., Fellow and Mathematical Lecturer of Clare Hall, Cambridge. 8vo. bds. 10s. 6d.

"The task is well executed . . . His arrangement is lucid, his proofs simple and beautiful."—THE EDUCATOR.

IX.

*By the same Author.*

**Elementary Hydrostatics.**

Accompanied by numerous Examples. Crown 8vo. cloth, 5s. 6d.

"An excellent introductory Book. The definitions are very clear: the descriptions and explanations are sufficiently full and intelligible: the investigations are simple and scientific. The examples greatly enhance its value."—ENGLISH JOURNAL OF EDUCATION, March 1853.

Cambridge.

*Mathematics.*

## X.

**An Elementary Treatise on the Differential and**

**Integral Calculus.** For the use of Colleges and Schools. By G. W. HEMMING, M.A., Fellow of St. John's College, Cambridge. Second Edition, with Corrections and Additions. 8vo. cloth, 9s.

This Edition has been carefully revised by the Author, and important alterations and additions have been introduced for the sake of rendering the work more available for School use.

"There is no book in common use from which so clear and exact a knowledge of the principles of the Calculus can be so readily obtained." *LITERARY GAZETTE.*

"Merits our highest commendation."—*ENGLISH JOURNAL OF EDUCATION*, March 1853.

## XI.

*A New and Cheaper (the Eighth) Edition of  
The Elements of Plane and Spherical Trigonometry.*

Greatly improved and enlarged. By J. C. SNOWBALL, M.A., Fellow of St. John's College, Cambridge.

Crown 8vo. cloth, 7s. 6d.

*This edition has been carefully revised by the author, and some important alterations and additions have been introduced. A large addition has been made to the collection of EXAMPLES FOR PRACTICE.*

"Excellent."—*GUARDIAN.*

"Abounds with choice examples for practice, and much valuable information is interspersed throughout the volume. The investigations are remarkably neat, and the main principles of Trigonometry are presented in a very clear and intelligible form."—*ENGLISH JOURNAL OF EDUCATION*, March 1853.

"A new Edition of an old favourite text-book, and an improvement on the seven that have preceded it in several respects. It has been carefully revised throughout; the methods for establishing the most important propositions are superior; more than 200 new examples—taken from recent Examination Papers—have been added; and to crown all, the price has been reduced. What more need be said to secure for it a welcome from those who wish to make themselves masters of the important subject of which it treats?"—*ATHENEUM*, March 12, 1853.

## XII.

*By the same Author.*

**The Elements of Mechanics.**

Second Edition. 8vo. bds. 8s. 6d.

## XIII.

**A Treatise on Dynamics.**

By W. P. WILSON, M.A., Fellow of St. John's College, Cambridge, and Professor of Mathematics in Queen's College, Belfast. 8vo. bds. 9s. 6d.

Macmillan and Co.

XIV.

**Plane Astronomy.**

Including Explanations of Celestial Phenomena, and Descriptions of Astronomical Instruments. By the Rev. A. R. GRANT, M.A., Fellow of Trinity College, Cambridge. 8vo. bds. 6s.

XV.

**Geometrical Problems in the Properties of Conic Sections.**

By the Rev. H. LATHAM, M.A., Fellow and Tutor of Trinity Hall, Cambridge. 8vo. 3s. 6d.

XVI.

*A New and improved Edition of*

**A Short and Easy Course of Algebra.**

Chiefly designed for the use of the Junior Classes in Schools, with a numerous collection of Original Easy Exercises. By the Rev. T. LUND, B.D., late Fellow of St. John's College, Cambridge. 12mo. bound in cloth, 3s. 6d.

*"His definitions are admirable for their simplicity and clearness."*

ATHENÆUM.

*"We have much reason to admire the happy art of the author in making crooked things straight and rough places smooth."*—EDUCATOR.

XVII.

**A Geometrical Treatise on the Conic Sections.**

With an Appendix, containing the first Nine and the Eleventh of Newton's Lemmas: intended chiefly as an Introduction to the Geometrical Doctrine of Limits. By the Rev. J. E. COOPER, M.A., Fellow of St. John's College, Cambridge. *Nearly ready.*

XVIII.

**The Mathematical Principles of Mechanical Philosophy,**

and their Applications to Elementary Mechanics and Architecture, but chiefly to the Theory of Universal Gravitation. By the Rev. J. H. PRATT, M.A., Fellow of Caius College, Cambridge. Second Edition, revised and improved. 8vo. bds. £1. 1s.

XIX.

**The Theory of Double Refraction.**

By the Rev. W. N. GRIFFIN, M.A., late Fellow and Assistant Tutor of St. John's College, Cambridge. 8vo. sewed, 2s.

Cambridge.

## XX.

**Cambridge and Dublin Mathematical Journal.**

Edited by W. THOMSON, M.A., Fellow of St. Peter's College, Cambridge, and Professor of Natural Philosophy in the University of Glasgow. Vols. I. to VII.  
8vo. cloth, £5. 12s.

A FEW COMPLETE SETS MAY STILL BE HAD.

Three Nos., price 6s. each, are published yearly.

The Subscription, payable in advance, is 16s., or 16s. 6d. free by Post.

Also recently published, a second Edition of the CAMBRIDGE MATHEMATICAL JOURNAL, Vol. I.; being the First Series of the above Work. 8vo. cloth, 18s.

*"Another instance of the efficiency of the course of study in this University, in producing not merely expert algebraists, but sound and original mathematical thinkers, (and, perhaps, a more striking one, from the generality of its contributors being men of comparatively junior standing), is to be found in this Journal, which is full of very original communications."*—SIR JOHN HERSCHEL'S Address at the British Association.

*"A work of great merit and service to science. Its various contributors have exhibited extensive mathematical learning and vigorous originality of thought."*—SIR WILLIAM HAMILTON.

*"A publication which is justly distinguished for the originality and elegance of its contributions to every department of analysis."* R&V. PROF. PEACOCK.

## XXI.

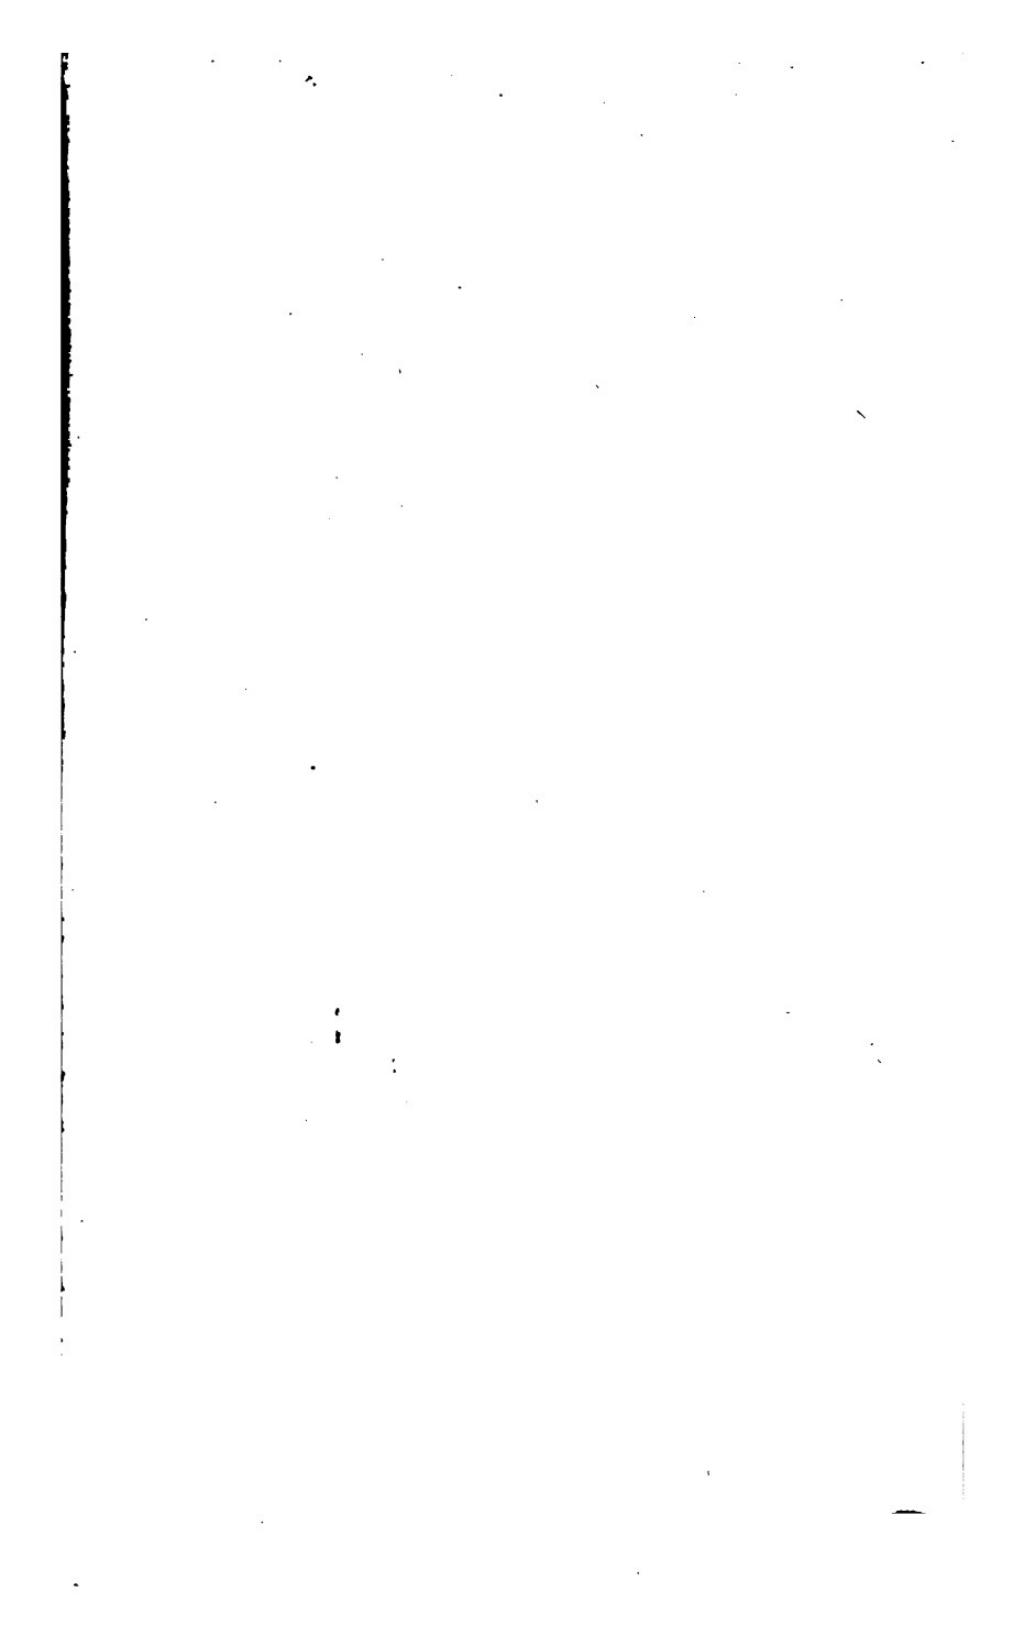

**Solutions of the Problems proposed in the Senate-House Examination, January 8, 1852.** 8vo. sewed, 1s. 6d.

**Cambridge: MACMILLAN & Co.**

**London: GEORGE BELL. Dublin: HODGES & SMITH.**

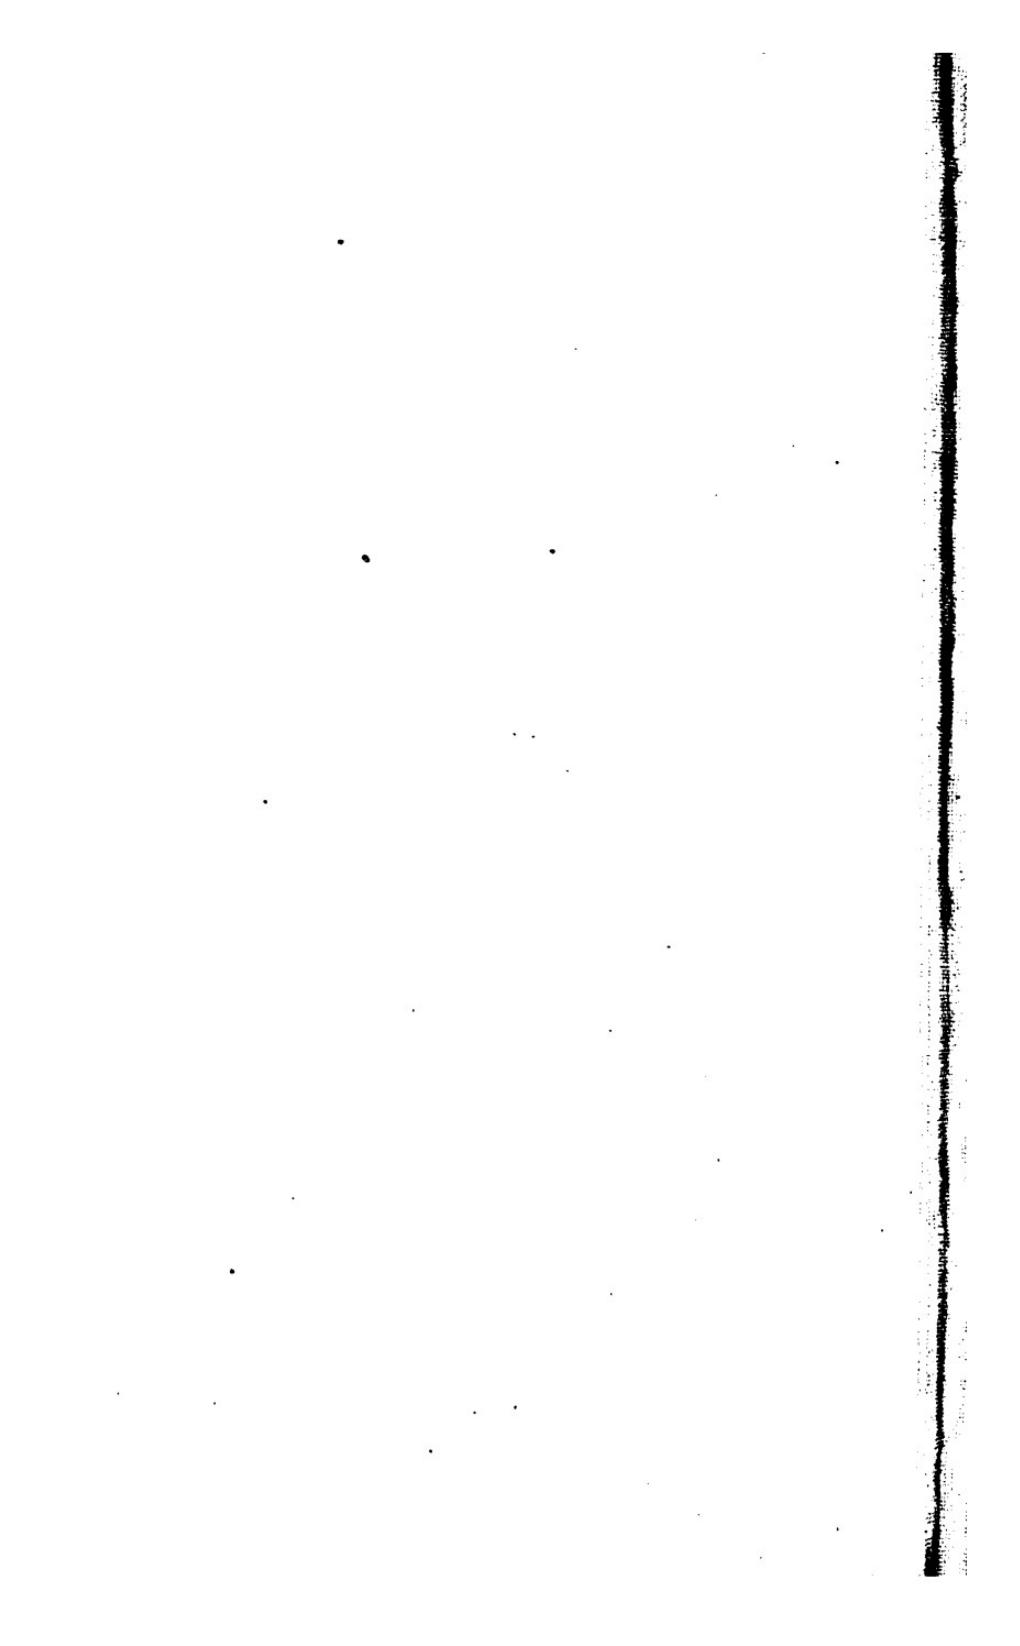

**Edinburgh: EDMONSTON & DOUGLAS.**

**Glasgow: JAS. MACLEHOSE. Oxford: J. H. PARKER.**

May 27 1929
